N-2000 ANTIMICROBIAL

FOR THE CONTROL OF ALGAE, BACTERIA, FUNGI, AND MOLLUSKS IN A WIDE RANGE OF INDUSTRIAL PROCESS WATERS, WATER FLOOD INJECTION WATERS, FRACKING FLUIDS, DRILLING AND WORKOVER FLUIDS, AND MATERIAL PRESERVATIONS

Active Ingredient:
Dodecylguanidine hydrochloride ........................................... 35.0%

Other Ingredients ................................................................. 65.0%

TOTAL ................................................................. 100.0%

DANGER

KEEP OUT OF REACH OF CHILDREN

EPA Reg. No. 39967-107

EPA Est. No.

LOT NO.:

NET WEIGHT:

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER. Corrosive. Causes irreversible eye damage and skin burns. May be fatal if inhaled. Do not get in eyes, on skin, or on clothing. Do not breath vapor or spray mist. Harmful if swallowed or absorbed through skin.

PHYSICAL OR CHEMICAL HAZARDS

Combustible. Do not use or store near heat or open flame. Do not use or store near heat or open flame.

FIRST AID

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

IF SWALLOWED: Call a poison control center or doctor for treatment advice.

HOT LINE NUMBER: Have the product container or label with you when calling a poison control center or doctor before going for treatment. You may also contact 800-410-3063 for emergency medical treatment information. For transportation emergencies, call Chemtrec at 1-800-424-930.

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage corrosive to eyes and skin. Treat symptomatically.

Personal Protective Equipment

All handlers must wear:
-Protective eyewear (goggles, face shield or safety glasses)
-Respirator with an organic-vapor removing cartridge with a prefilter approved for pesticide (MSHA/NIOSH approval number prefix TC-23C), or a canister approved for pesticides (MSHA/NIOSH approval number prefix TC-14G), or a NIOSH approved respirator with an organic vapor (OV) cartridge or canister with any N, R, P or HE prefilter.
-Coveralls over long-sleeved shirt, long pants,
-Socks and chemical-resistant footwear, and
-Chemical resistant gloves (Barrier laminate, Butyl rubber, Nitrile rubber, Neoprene rubber, Polyvinyl Chloride or Viton, selection category C)
-When mixing, loading, and cleaning equipment wear a chemical resistant apron. For overhead exposure wear chemical resistant head gear.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, exist, use detergent and hot water. Keep and wash PPE separately from other laundry.
Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this production’s concentrate. Do not reuse them.

User Safety Recommendations

User should wash hands before, eating, drinking, chewing gum, using tobacco, or using the toilet. User should remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. User should remove PPE immediately after handling this product. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish, aquatic invertebrates, shrimp and oysters. Do not discharge effluent containing this product into lakes, stream, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination systems (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA. Do not contaminate water by cleaning of equipment or disposal of waste. Apply this pesticide only as specified on this label.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. N-2000 Antimicrobial is approved by the FDA (21 CFR 176.170 and 176.300) for use in the manufacturer of paper and paperboard that contacts food and for slimicides. Other than the two uses for pulp and paper mill systems, and food packaging, do not use for any material preservation applications involving direct or indirect food or drinking water containers.

FOR DETAILED DIRECTIONS FOR USE, PLEASE REFER TO THE LANXESS CORPORATION LABEL SUPPLEMENT. Read these entire Directions before using N-2000 Antimicrobial.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

STORAGE: Keep away from heat, sparks, and open flame. Do not puncture or incinerate container. Store this product between 60° F and 110° F. Keep drum tightly closed when not in use.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to the label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA regional Office for guidance.

CONTAINER HANDLING. Do no refill or reuse container. Triple rinse as follows: Empty remaining contents into application equipment or mix tank. Tip container on its side and roll it back and forth, ensuring at least one complete revolution for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinsate into the application equipment or mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling or reconditioning. If not available, puncture and dispose in a sanitary landfill.

N-2000 ANTIMICROBIAL

EPA Registration Number 39967-107
N-2000 ANTIMICROBIAL

FOR THE CONTROL OF ALGAE, BACTERIA, FUNGI, AND MOLLUSKS IN A WIDE RANGE OF
INDUSTRIAL PROCESS WATERS, WATER FLOOD INJECTION WATERS, FRACKING FLUIDS,
DRILLING AND WORKOVER FLUIDS AND MATERIAL PRESERVATIONS

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with
its labeling. N-2000 Antimicrobial is approved by the FDA (21 CFR 176.170 and 176.300) for use in
the manufacturer of paper and paperboard that contacts food and for slimicides. Other than the two uses
for pulp and paper mill systems, and food packaging, do not use for any material preservation applications
involving director indirect food or drinking water containers.

INDUSTRIAL PROCESSES AND WATER SYSTEMS

AIR WASHING SYSTEMS: For use only in Industrial Air Washer Systems that maintain
effective mist eliminating components. Badly fouled systems must be cleaned before
treatment is begun. SLUG OR INTERMITTENT METHOD: Initial dose: When system
is noticeably fouled apply 6.3 to 12.5 oz./1000 gal (50 to 100 ppm). Repeat until control
is achieved. Subsequent dose: When control is evident, apply 3.1 to 6.3 oz/1000 gal
(25-50 ppm) every three days or as needed. CONTINUOUS METHOD: Initial dose:
When system is noticeably fouled, apply 6.3 oz/1000 gal (50) per day. Subsequent
dose: Maintain initial rate by continuously feeding 3.1 to 6.3 oz/1000 gal (25-50 ppm)
per day.

INDUSTRIAL RECIRCULATING WATER COOLING TOWERS: For use only in:
Auxiliary and Standby Commercial and Industrial Systems that maintain effective mist
eliminating components, Brewery Pasteurizer Water and Industrial Recirculating Water
Cooling Towers. Badly fouled systems must be cleaned before treatment is begun.
SLUG OR INTERMITTENT METHOD: Initial dose: When system is noticeably fouled
apply 6.3 to 12.5 oz/1000 gal (50 to 100 ppm). Repeat until control is achieved.
Subsequent dose: When control is evident, apply 3.1 to 6.3 oz/1000 gal (25-50 ppm)
every three days or as needed. CONTINUOUS METHOD: Initial dose: When system
is noticeably fouled, apply 6.3 oz/1000 gal (50 ppm) per day. Subsequent dose:
Maintain initial rate by continuously feeding 3.1 to 6.3 oz/1000 gal (25-50 ppm) per day.

OIL FIELD WATER SYSTEMS (Including water flood injection water and frac
fluids): Badly fouled systems should be cleaned prior to treatment. Addition may be
made at the free water knockouts before or after the injection pumps and injection well
headers
SLUG OR INTERMITTENT METHOD: Initial dose: When system is noticeably fouled
apply 6.3 to 12.5 oz/1000 gal (50 to 100 ppm). Repeat until control is achieved for 2 to
8 hours per day once per week or daily as needed. Subsequent dose: When control is
evident, apply 3.1 to 6.3 oz/1000 gal (25-50 ppm) every three days or as needed.  
**CONTINUOUS METHOD: Initial dose:** When system is noticeably fouled, apply 6.3 oz/1000 gal (50 ppm) per day.  Subsequent dose: Maintain initial rate by continuously feeding 3.1 to 6.3 oz/1000 gal (25-50 ppm) per day.

**A) WATER FLOOD INJECTION WATER**
Initial Treatment: When the system is noticeably contaminated, add 50-100 ppm N-2000 Antimicrobial to the system (0.05 to 0.10 gallons N-2000 Antimicrobial per 1,000 gallons flood water). Repeat until control is achieved.  
Subsequent Dose: When microbial control is evident, add 25-100 ppm N-2000 Antimicrobial (0.025 to 0.10 gallons N-2000 Antimicrobial per 1,000 gallons flood water) to the system weekly, or as needed to maintain.

**B) FRAC FLUIDS**
Add N-2000 Antimicrobial to the frac water storage tanks or directly into the well head injection pipeline as the water is being pumped down-hole.  
Dose Range: N-2000 Antimicrobial should be added at a rate of 25 to 100 ppm (0.025 – 0.10 gallons per 1,000 gallons) depending on the degree of bacterial fouling in the source water.

**OIL RECOVERY DRILLING FLUIDS:** Add directly to the packer fluid, completion fluids, workover fluids or drilling mud. The dosage rate will depend upon the severity of the contamination.  
**SLUG OR INTERMITTENT METHOD: Initial dose:** when system is noticeably fouled apply 6.3 to 12.5 oz/1000 gal (50 to 100 ppm) intermittently for 2 to 8 hours per week or daily as needed. Repeat until control is achieved.  
**Subsequent dose:** When control is established, apply 3.1 to 6.3 oz/1000 gal (25 to 50 ppm) every three days or as needed to maintain control.

**a) DRILLING, COMPLETION AND WORKOVER FLUIDS**
N-2000 Antimicrobial should be added to a drilling fluid system at a point of uniform mixing such as the circulating mud tank.  
**Initial treatment:** Add 50 to 100 ppm N-2000 Antimicrobial (0.158 to 0.315 gallons N-2000 Antimicrobial per 100 barrels of fluid) to a freshly prepared fluid depending on the severity of contamination.  
**Maintenance dosage:** Maintain a concentration of 25 to 100 ppm of N-2000 Antimicrobial by adding 0.079 to 0.315 gallons of N-2000 Antimicrobial per 100 barrels of additional fluid, or as needed, depending on the severity of the contamination.

**SEWAGE DISPOSAL LAGOONS:** This product reduces the growth of algae on the surface of sewage disposal lagoons which, if unchecked, can cause the lagoon to become totally anaerobic and emit odors. Dilute N-2000 Antimicrobial with water to accommodate the delivery characteristics of the pump and spray rig, and apply evenly to the surface of the lagoon. Dosage should be 1.0 to 1.5 ounces (by weight) of N-2000 Antimicrobial per 100 square feet of surface, depending on the population density of the algal blooms. The interval between treatments will be determined by the reappearance of floating algal blooms and subsequent treatment should be made as spot treatments at the same dosage as the initial treatment. A small outboard motorboat equipped with a tank-pump-spray boom assembly can be used to traverse the lagoon between flagment on opposite shores in order to lay down an even spray.
PULP AND PAPER MILL SYSTEMS: N-2000 Antimicrobial should be added to a paper making system at a point of uniform mixing such as the beaters, broke chest pump, save-all tank, or white tank. **Initial Dose:** When the system is noticeably contaminated, add 0.007-0.57 lbs of N-2000 Antimicrobial per ton of pulp or paper (dry basis) (1.2 – 100 ppm active) as a slug dose. Repeat until control is achieved. Heavily fouled systems should be boiled out prior to initial treatment. **Subsequent Dose:** When microbial control is evident, add 0.007 – 0.57 lbs of N-2000 Antimicrobial per ton of pulp or paper (dry basis) (1.2 – 100 ppm active) as a slug dose as necessary to maintain control.

MATERIAL PRESERVATION
Other than food packaging, do NOT use for any material preservation applications involving direct or indirect food or drinking water contact.

PULP AND PAPER MILL PROCESSING CHEMICALS, ADHESIVES, AND COATINGS: Add N-2000 Antimicrobial directly to the material to be preserved prior to manufacturing into the finished product, (i.e., pulp, broke, polymers, defoamers, alum, emulsions, adhesives, papermill coatings, pigment slurries, and paper products. The dosage rate will depend upon the material to be preserved and the storage time. The usual addition should be 1.3 to 3.8 oz/1000 gal (10-30 ppm). Under extreme conditions of spoilage, the dosage rate should be increased to 1.6 to 10.0 oz/1000 gal (12.5 to 80 ppm). The dosage rates are based on a maximum storage time of 2 weeks. For storage time greater than 2 weeks the maximum concentration should be increased to 6.3 to 12.5 oz/1000 gal (50 to 100 ppm). Do not use for adhesives or coatings that involve direct or indirect food, or human drinking water contact application.

Dosage Rate per 1000 gallons of material:
Adhesives: 1.3 - 3.8 oz (10-30 ppm)
Alum: 1.3 - 3.8 oz (10-30 ppm)
Broke: 1.3 - 3.8 oz (10-30 ppm)
Defoamers: 1.3 - 3.8 oz (10-30 ppm)
Emulsions: 1.3 - 3.8 oz (10-30 ppm)
Paper products: 1.3 - 3.8 oz (10-30 ppm)
Papermill coatings: 1.3 - 3.8 oz (10-30 ppm)
Pigment slurries: 1.3 - 3.8 oz (10-30 ppm)
Polymers: 1.3 - 3.8 oz (10-30 ppm)
Pulp: 1.3 - 3.8 oz (10-30 ppm)

ADHESIVE SYSTEMS (NON-FOOD CONTACT PAPER): N-2000 Antimicrobial is used
in the preservation of non-food contact paper related aqueous systems. The exact amount for the preservative of any given formulation will depend on the components, storage time, temperature, etc., and can be determined by the actual testing based on formula weight. Dosage Rate per 1000 gallons of material:

Automobile adhesives tapes: 2.0 - 8.01 lbs (250-1000 ppm)
Glues: 2.0-8.01 lbs (250-1000 ppm)
Nonfood packaging adhesives: 2.0-8.01 lbs (250-1000 ppm)
Wallpaper: 2.0-8.01 lbs (250-1000 ppm)
Wood glue: 2.0-8.01 lbs (250-1000 ppm)

PAINTS, COATINGS, AND STAINS: N-2000 Antimicrobial is used in the preservation of non-food contact paper related aqueous systems. The exact amount for the preservative of any given formulation will depend on the components, storage time, temperature, etc., and can be determined by the actual testing based on formula weight. Dosage Rate per 1000 gallons of material:

Paints and coatings (between manufacture and formation): 2.0-8.01 lbs (250-1000 ppm)
Coatings systems (paints and coatings as finished products): 2.0-8.01 lbs (250-1000 ppm)
Titanium dioxide and calcium carbonates (precursors to paint and coating products): 2.0-8.01 lbs (250-1000 ppm)

PIGMENTS, DYES, AND FILLER SUSPENSION: N-2000 Antimicrobial is used in the preservation of non-food contact paper related aqueous systems. The exact amount for the preservative of any given formulation will depend on the components, storage time, temperature, etc., and can be determined by the actual testing based on formula weight. Dosage Rate per 1000 gallons of material:

Pigments slurries (paint dyes for non-clothing such as industrial fibers): 2.0-8.01 lbs (250-1000 ppm)
Calcium Carbonate: 2.0-8.01 lbs (250-1000 ppm)
Clay: 2.0-8.01 lbs (250-1000 ppm)
Titanium dioxide: 2.0-8.01 lbs (250-1000 ppm)

POLYMER DISPERSION AND EMULSIONS: N-2000 Antimicrobial is used in the preservation of non-food contact paper related aqueous systems. The exact amount for the preservative of any given formulation will depend on the components, storage time, temperature, etc., and can be determined by the actual testing based on formula weight. Dosage Rate per 1000 gallons of material:

Contact polymer systems: 2.0-8.01 lbs (250-1000 ppm)
Latex emulsions systems: 2.0-8.01 lbs (250-1000 ppm)

FOOD PACKAGING: For paper and paperboard intended for use in contact with food,
the rate of application of this product must be adjusted so that the amount of active ingredient (dodecylguanidine hydrochloride) retained does not exceed 0.4 percent by weight of the paper or paperboard. This product is effective in controlling microorganisms, such as bacteria, fungi, and yeasts, which cause deterioration of paper and paperboard products or articles molded from paper pulp. It may be added to the pulp stock in the beater or applied to the formed sheet by size press or roll coater, or as a uniform spray. If the product is used as a beater additive, the degree of retention of the active ingredient will depend upon the nature of the other additives in the system. Technical service is available from the manufacturer of this product to assist customers in making the proper and most efficient use of the product.

REMARKS
If you need assistance or information, please call your nearest LANXESS representative, or our Pittsburgh office at 800-LANXESS.
