FIFRA Section 24(c) Special Local Need Label
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON

SULPHUR W.G.

EPA Reg. No. 62562-4
EPA SLN No. OR-190005 A

For Control of Bud Mite in Hazelnuts/Filberts
This label is valid until December 31, 2025 or until otherwise amended, withdrawn, canceled, or suspended.

Active Ingredient:
Sulfur* .......................................................... 80.0%
Other Ingredients: .............................................. 20.0%
Total ............................................................. 100.0%
*CAS No. 7704-34-9

KEEP OUT OF REACH OF CHILDREN
CAUTION

ENVIRONMENTAL HAZARDS
This pesticide is toxic to fish and aquatic organisms. DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high-water mark. DO NOT contaminate water when disposing of rinsate or equipment washwaters.
DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This Special Local Need (SLN) label and the federal label for this product must be in the possession of the user at the time of pesticide application.
- Follow all applicable directions, restrictions, Worker protection Standard requirements, and precautions on the Sulphur W.G. package label, EPA Reg. No. 62562-4, and this SLN label.
- **DO NOT** apply this product in a way that will contact workers or other persons, either directly or through drift.
- Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

**Spray Coverage**
Foliage must be thoroughly covered with spray. Dense leaf canopies can prevent adequate spray coverage. Due to the need for thorough spray coverage and sufficient spray volume required for control of bud mites, applications should be made by ground equipment.

**Hazelnuts/Filberts:** for control of bud mites, apply 5-25 pounds Sulphur W.G. per acre in 50-400 gals of spray volume. Begin application at bud swell and repeat as necessary through shoot elongation stage. Repeat applications on 10 - 14 day intervals.

**Restrictions and Precautions:**
- Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.
- Do not apply if temperatures during or within 3 days after application are expected to exceed 90°F in the area to be treated.
- Do not apply more than 200 pounds of Sulfur W.G. per acre per season or make more than 8 applications per season.
- For use under this SLN, do not apply this product through any type of irrigation system.

RE:  **Amended SLN**
Quimetal Industrial S.A. / Sulphur W.G. (a.i. sulfur)
EPA Reg. No. 62562-4,  **EPA SLN No. OR-190005**
Site: Filberts (Hazelnuts), for control of bud mite
Expiration Date: December 31, 2025

The Oregon Department of Agriculture (ODA) has amended the FIFRA Section 24(c) Special Local Need registration of the Quimetal Industrial S.A. product, Sulphur W.G., EPA Reg. No. 62562-4, for control of bud mites in filberts (hazelnuts) grown in Oregon. The amended label is enclosed.

SLN No. OR-190005 was approved with the intent that it ultimately serve as a direct replacement for SLN No. OR-180007, which is for use of a similar product, BASF Corporation's Kumulus® DF Fungicide/Acaricide, EPA Reg. No. 51036-352. It is believed that BASF may be planning to discontinue its registration of Kumulus DF in the near future.

ODA has recently amended SLN No. OR-180007 as a result of a recent EPA review of that registration, in which we were requested to add information to the label indicating the maximum annual application rate. In conjunction with adding the information requested by EPA, we also modified the original label language that indicates the earliest timing for effective application of sulfur for bud mite control. We have now amended SLN No. OR-190005 to incorporate these same label changes.

Therefore, ODA has amended the SLN No. OR-190005 label as follows:

- Revised the sentence: "Begin application at dormant bud stage bud swell and repeat as necessary through shoot elongation stage."
- Added the new bullet statement in Restrictions and Precautions: "Do not apply more than 200 pounds of Sulphur W.G. per acre per season or make more than 8 applications per season."
- Extended the expiration date by an additional year, to December 31, 2025.

As a courtesy, we are also enclosing a copy of the Wilbur-Ellis Company LLC distributor SLN label for Sulfur Dry Flowable, EPA Reg. No. 62562-4-2935, EPA SLN No. OR-190005. It is acknowledged that Quimetal Industrial S.A. is the Section 24(c) registrant. If/When Quimetal Industrial elects to cancel this SLN registration, the Wilbur-Ellis Sulfur Dry Flowable EPA SLN No. OR-190005 label will automatically become invalid.

Please contact me if you have any questions about this SLN registration.
