EPA Reg. No. 32270-37

---

**GENERAL USE INFORMATION**

Optify® is a broad-spectrum plant growth regulator for use on field crops, fruits, nuts, and vines. Optify may be applied in liquid sprays or with irrigation. Optimum growth effects are achieved when the product is applied on a regular scheduled application program.

Since all combinations or sequences of foliar pesticide and nutrient applications including surfactants and adjuvants have not been tested, before widespread application, test a small area to be sprayed first to make certain that no phytotoxicity occurs.

Read the entire label before using Optify. Consult your State Agricultural Experimental Station or Extension Service Specialist for additional information on application timing, rates and any additional requirements or restrictions.

---

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

---

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Chemical-resistant gloves made of any waterproof material
- Shoes and socks
- Protective eyewear

---

**NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Keep unprotected persons out of treated area until sprays have dried.
FOLIAR AND SOIL APPLICATION INSTRUCTIONS
Optify is a broad spectrum biopesticide to improve germination and seedling development, stimulate root and shoot growth, increase chlorophyll content, improve plant ability to withstand stress, and increase yields when used alone or in mixtures with nutrients and other pesticide products on field crops; vegetables, fruits, nuts, vine crops, turf and ornamentals.

For all crops, apply Optify at a rate of 3 to 12 ounces per acre unless otherwise specified on this label. Refer to the Foliar and Soil Application Use Rates for Outdoor and Greenhouse Crops section of this label for specific soil and foliar application use rate and timing information.

Applications can begin prior to planting for soil applications and continue as long as plants are still in the vegetative stage. Foliar applications may begin when plants reach or surpass the 4-leaf stage of development. For best results, apply Optify before leaf hardening.

Repeat applications no sooner than every 7 days. Optify is effective for use in programs where repeated applications throughout the growing season are necessary. If not applied on a routine spray schedule, apply Optify alone or in combination with appropriate fertilizers and pesticides.

Do not make foliar applications when conditions favor drift from target area or wind speed is greater than 10 mph. Spray equipment must be cleaned thoroughly before and after applications.

MIXING INSTRUCTIONS
For foliar applications, be sure the sprayer is clean and not contaminated with other materials prior to use. When using an agitated spray tank fill tank 1/2 to 3/4 full with clean water and start agitation. Be certain that the agitation system is working properly. With the agitator running add the required amount of Optify to the tank. If tank mixing with other materials, add them to the tank and continue agitation. Continue filling tank with the remainder of the water. Agitate until mixed thoroughly and avoid excessive foaming. Mix as needed. Do not store diluted material overnight.

For granular applications, Optify is applied to provide uniform coverage of all granules. In cases where the amount of fertilizer per acre is less than 100 pounds, Optify should be applied to a small amount of fertilizer to ensure that it will not cause the fertilizer to cake.

COMPATIBILITY
Optify is compatible with most commonly used agricultural pesticides. If compatibility is in question, use the compatibility jar test before mixing a whole tank. Dilute Optify to its use rate and then with stirring add the other components in the appropriate amounts. If precipitation, gelation, or sedimentation occurs, do not use the combination of pesticides. Because of the wide variety of possible combinations that can be encountered, observe all precautions and limitations on the label of all products used in mixtures.

SPRINKLER IRRIGATION SYSTEM APPLICATION
Apply this product only through drip, microjet, lateral move, end tow, side (wheel) roll, hand move, solid set and center pivot irrigation systems. Do not apply this product through any other type of irrigation system. Use standard tank agitation when mixing Optify alone or with other pesticides. Fill the tank halfway with water, begin agitation and add Optify, other tank mix pesticides or fertilizers and fill with water.

Preparation of Injection Equipment: Remove pesticide, scale residues and other foreign matter from the chemical tank and entire injection system. Flush with clean water.

Set the sprinkler system to deliver 0.1 to 0.3 inch of water per acre. Start the sprinkler system and uniformly inject the solution of Optify into the irrigation water line. Inject the Optify solution with a positive displacement pump into the main line before a right angle turn to ensure adequate mixing. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Crop injury or lack of effectiveness in the crop can result from non-uniform distribution of treated water. A person with knowledge of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut down and make necessary adjustments should the need arise. The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

When applying Optify using microjet and drip irrigation systems avoid further irrigation after the treatment has been completed for 24 to 48 hours.

When applying Optify using solid set, hand move and center pivot irrigation systems avoid further irrigation of the treated area until the foliage is dry to prevent washing the product from the crop.

When applying Optify using a continuously moving system, such as lateral move, or side (wheel) roll system, inject this product-water mixture continuously, applying the labeled rate per acre for that crop.

When applying Optify through stationary or non-continuous moving systems, inject the product-water mixture in the last 15-30 minutes of each set allowing sufficient time for all the required pesticide to be applied by all the sprinkler heads and applying the labeled rate per acre for that crop.

Apply Optify continuously for the duration of the water application.

Information and Instructions for Irrigation Systems: Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

Public system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

Irrigation systems connected to public water systems must contain a functional, reduced-pressure zone (RPZ), backflow preventer or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The system must contain a functional check valve, vacuum relief
valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticides distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. For drip (trickle) irrigation: The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

FOLIAR AND SOIL APPLICATION USE RATES FOR OUTDOOR AND GREENHOUSE CROPS

For all crops, Optify can be applied to the soil or to the foliage. Use rates range from 3 to 12 ounces per acre for soil and foliar applications: depending upon the application method, product placement and timing. Refer to the Foliar applications and Soil applications directions hereafter for use rate and timing information.

Foliar applications: Optify may be applied directly to the foliage of actively growing plants at a minimum rate of 6 ounces per acre in a minimum spray volume of 5 gallons per acre. Optify may be applied with all nutrient products and pesticides, but provides best results when applied with nutrients.

Soil applications (including irrigation): Optify works best when soil applications are made with fertilizer or nutrient products and can be applied with liquid or granular formulations. Rates will depend upon the formulation and placement of the product. Rates are as follows:

1. Impregnated on granules: Apply Optify at a rate of 8 to 12 ounces per acre.
2. Applied with liquid fertilizer at planting: Apply Optify at 5 to 8 ounces per acre. Recommended rates are 6 ounces per acre when applied in-furrow and 8 ounces per acre when applied in an off-set fertilizer band, such as 2 by 2 placement. For broadcast, side dress, or top dress applications, apply at 8 to 12 ounces per acre. Recommended rates for side dress applications are 8 ounces when the side dress band is close to the row (within 4 inches), 10 ounces when the band is more than 4 inches and less than 10 inches from the row, and 12 ounces when the side dress band is more than 10 inches from the row.
3. For all applications through an irrigation system, apply at 8 ounces per acre.

FOR CEREAL GRAINS, VEGETABLE CROPS, AND OTHER AGRONOMIC CROPS: Apply a minimum rate of 6 ounces of Optify in a minimum of 5 gallons finished spray per acre when applied as a foliar spray. For soil applications, a rate of 5 to 12 ounces per acre is recommended, depending upon the application method, product placement and timing.

Specific Use Restrictions: Do not apply more than 12 ounces per acre application. Do not apply more than 24 ounces per acre per season. Do not make post-harvest applications. PHI: 0 days.

Cereal Grains, including: Barley, Buckwheat, Corn (sweet and field), Millet, Oats, Popcorn, Rice, Rye, Sorghum, Triticale, Wheat, Wild rice

Cucurbit and Fruitling Vegetables, including: Cucumber, Eggplant, Gherkin, Muskmelon, Okra, Pepper, Pumpkin, Squash, Tomato, Watermelon Leafy Vegetables, including: Arugula, Cardoon, Celery, Chinese Celery, Chervil, Gai Larn, Endive, Fennel, Lettuce, Oreg, Parsley, Purslane, Radicchio, Rhubarb, Spinach, Swiss Chard, Brassica (Cole)

Leafy Vegetables including: Broccoli, Broccoli Raab, Brussels Sprouts, Cabbage, Chinese Cabbage (Bok Choy), Chinese Cabbage (Napa), Chinese Mustard Cabbage (Gai Choy), Cauliflower, Collards, Kale, Kohlrabi, Mustard Greens, Mustard Spinach

Legume Vegetables, including: Beans, Broad bean, Chickpea, Lantil, Peas, Soybean

Root, Tuber and Bulb Vegetables, including: Beet (garden and sugar), Carrot, Cassava, Celeriac, Chayote, Chervil, Chicory, Garlic: Ginger, Ginseng, Horseradish, Leek, Onion, Parsley root, Potato, Radish, Rutabaga, Salsify, Shallot, Sweet potato, Turnip, Yam

Other Agronomic Crops, including: Artichoke, Asparagus, Coffee, Cotton, Grass grown for seed, Hops, Industrial hemp, Jojoba, Papaya, Pistachio, Sesame, Sunflower, Tea, Mint, Spearmint

FOR FRUIT, NUT, BERRY AND VINE CROPS: Apply a minimum rate of 6 ounces of Optify in a minimum of 25 gallons finished spray per acre when applied as a foliar spray. For soil applications, a rate of 5 to 12 ounces per acre is recommended, depending upon the application method, product placement and timing.

Specific Use Restrictions: Do not apply more than 12 ounces per acre per application. PHI: 0 days.

Berries and Vine Crops, including: Blackberry, Blueberry, Cranberry, Elderberry, Gooseberry, Grape, Huckleberry, Loganberry, Raspberry, Strawberry

Citrus, including: Grapefruit, Lemon, Lime, Mandarin, Orange, Pummelo, Tangerine

Nut Crop, including: Almond, Beech nut, Brazil nut, Butternut, Cashew, Chestnut, Chinquapin, Filbert, Hickory, Macadamia, Pecan, Pistachio, Walnut

Pome Fruit, including: Apple, Crabapple, Loquat, Mayhaw, Pear, Quince
Stone Fruit, including: Apricot, Cherry, Nectarine, Peach, Plum, Prune, Plumcot

FOR ORNAMENTAL CROPS (including broad/leaf shrubs and trees, flowering plants and bulbs, and foliage plants): apply a minimum rate of 6 ounces of Optify in a minimum of 25 gallons finished spray per acre when applied as a foliar spray. For soil applications, a rate of 5 to 12 ounces per acre is recommended, depending upon the application method, product placement and timing.

Specific Use Restrictions: Do not apply more than 12 ounces per acre per application. Do not apply more than 24 ounces per acre per season.

IMPORTANT NOTE: Plant sensitivities to Optify have been found to be acceptable for plants listed on this label; however it is impossible to know sensitivities under all conditions and phytoxicity may occur. The user must determine if Optify can be used safely prior to large-scale commercial use. In a small area, apply the listed rates to the plants in question, i.e. foliage, fruit, etc., and observe for 7-10 days for symptoms of phytoxicity prior to large-scale commercial use. Do not apply foliar sprays to open blooms of Geranium, Marigold, Pansy, and Petunia.

Broadleaf Shrubs and Trees: Andromeda, Ash, Aspen, Azalea, Buckeye, Camellia, Cherry Laurel, Crabapple, Dogwood, Eucalyptus, Euonymus, Firethorn, Flowering almond, Flowering cherry, Flowering peach, Flowering plum, Flowering quince, Hawthorn, Holly, Laurel, Lilac, Magnolia, Maple, Oak, Poplar, Privet, Red-tip, Rhododendron, Sequoia, Spirea, Sycamore, Viburnum, Walnut

*NOTE: Do not apply foliar sprays of Optify to open blooms of these species.

Foliage plants: Aglaonema, Artenesia, Boston fern, Dracaena, Dumbcane, Fatsia, Ficus, Leatherleaf fern, Lipstick plant, Ming aralia, Oyster plant, Pachysandra, Palm, Parlor palm, Peperomia, Philodendron, Prayer plant, Ruffle fern, Syngonium, Zebra plant

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage and disposal:
Storage: Keep pesticide in original container. Keep container tightly closed when not in use. Store product above 40°F. Do not store in aluminum, fiberglass, copper, brass, zinc, or galvanized containers. Protect from excessive heat. Store in a cool, dry place.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Handling: Non-refillable container. Do not reuse or refill this container. Triple rinse (or equivalent) promptly after emptying.

For containers less than five gallons triple rinse as follows: Empty remaining contents into application equipment or mix tank and drain for 10 seconds after flow begins to drip. Fill container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or mix tank or store rinsate for later disposal. Drain for 10 seconds after flow begins to drip. Repeat this procedure two more times. For containers greater than five gallons triple rinse as follows: Empty remaining contents into application equipment or mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip the container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand container on its end and tip back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or mix tank or store rinsate for later use or disposal. Repeat the procedure two more times. Then offer for recycling or reconditioning, or puncture and or dispose of in a sanitary landfill, or incineration, or if allowed by state and local authorities by burning. If burned, stay out of smoke.

LIMITED WARRANTY AND DISCLAIMER
The directions for use of this product are believed to be adequate and must be followed carefully. The use of this product is beyond the control of the manufacturer, and, therefore, to the extent consistent with applicable law, no warranty, representation, or guarantee of any kind, expressed or implied, is made as to the effects of such use or any results obtained if not used in accordance with printed directions and established safe practice or if unusual or extraordinary weather conditions occur. To the extent consistent with applicable law, the buyer's exclusive remedy and manufacturer's or seller's exclusive liability in tort or otherwise, shall be limited, at the manufacturer's option, to replacement of, or the repayment of the purchase price for, the quantity of product with respect to which damages are claimed.
