SUPPLEMENTAL LABEL
CLEANSWEEP® M HERBICIDE

LABEL REVISIONS: FALLOWLAND

READ AND FOLLOW THE ENTIRE LABEL BOOKLET FOR THIS PRODUCT BEFORE PROCEEDING WITH THE USE DIRECTIONS CONTAINED IN THIS SUPPLEMENTAL LABELING.

“Label” as used in this supplemental labeling refers to the label booklet for this product and this supplemental.

DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN ANY MANNER INCONSISTENT WITH ITS LABELING.

This label must be in the possession of the user at the time of application.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

ALL APPLICABLE DIRECTIONS, RESTRICTIONS AND PRECAUTIONS IN THE PRODUCT LABEL BOOKLET MUST BE FOLLOWED, INCLUDING STATEMENTS PERTAINING TO THE WORKER PROTECTION STANDARDS, ON THE EPA REGISTERED LABEL FOR CLEANSWEEP M HERBICIDE (EPA REG. NO. 71368-89).

Application Restrictions

- Do NOT make more than two applications per year, with a minimum retreatment interval of 21 days.
- Do NOT apply more than 2.4 pints of this product per acre per growing season.
- Do NOT allow livestock to graze in treated areas or feed treated plant material to livestock.
- Do NOT plant any crop until 90 days after application. Within 90 to 120 days after application, plant only crops listed on this label (wheat, barley, or oats not under-seeded with a legume). Do not plant other crops within 90 to 120 days of application.

Application Timing

Apply at a rate of 1 to 2 pints per acre, depending upon the susceptibility of the weed species. Apply to grasses from the 3-leaf stage. Unless otherwise specified below, apply when broadleaf weeds are up to the 8-leaf stage, 4 inches in height or 2 inches in diameter, whichever comes first.

Kochia seedlings less than 4 inches tall (including ALS resistant biotypes) will be controlled using the 1 pint per acre rate. However, when conditions for control are less favorable, such as under drought or cool temperature, a rate of 1-1/2 pints per acre will provide more consistent control of kochia seedlings 1 to 4 inches tall. For more consistent control of small kochia, apply when the plants are at least 1 inch tall. A rate of 1-1/2 pints per acre should be used for optimal control of dicamba tolerant kochia populations (refer to the “Management of Kochia Biotypes” in the “Broadleaf Weeds Controlled or Suppressed” section above).

This supplemental label expires on December 31, 2020, and must not be used beyond that date.

NOTICE

Read the “WARRANTY DISCLAIMER” and “LIMITATION OF LIABILITY” in the label booklet for this product before using this product. Those terms apply to this supplemental labeling and if those terms are not acceptable, return the product unopened at once.
