REstricted USE PESTICide

For retail sale to Dealers and Certified Applicators only. For use by Certified Applicators or persons under their direct supervision, and only those users for whom this Covered by the Applicator’s Certification. Refer to the directions in the Applicator’s Manual for requirements of the physician certifying the applicator.

Aluminum Phosphide Fumigant

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storing pesticides in the same areas used to store commodities.

Storage Instructions

1. JWEAL - PEELETS are in a dry, well ventilated area away from heat, under lock and key. Place as a pesticide in a secure, fireproof building where humans or domestic animals reside. Keep out of reach of children.

2. JWEAL - PEELETS are supplied in gas-tight, renewable aluminum flasks. Do not expose the product to atmos-pheric moisture any longer than is necessary and seal tightly before returning flasks to storage.

Pesticide Disposal

Do not contaminate water, food or feed by storage or disposal.

Aluminum phosphide gas is toxic. Do not inhale or seriously injured. Improper disposal of vesicant pesticides is a vi-olation of federal law. If these workers cannot be supplied by or use according to label instructions, contact your State Pesticide-Environ-mental Control Agency or Hazardous Waste Specialist at the nearest EPA Regional Office for guidance. For specific instructions, see Disposal Instructions and Spill and Leak Procedures in the Applicator’s Manual.

Some local and state waste disposal regulations may vary. Disposal procedures must be reviewed with appropriate state and federal authorities.

Container Disposal

Non-refillable container. Do not reuse or rebox this container. Offer for recycling, triple rinse container (or equivalent) promptly after emptying.

Spill and Disposal Procedures

General Precautions

A spill, accidental or handling of typical water or sewer systems. Do not contaminate water, food or feed by storage or disposal.

Inhalation

Contact a Poison Control Center or Doctor if symptoms occur. Do not give anything by mouth to an unconscious person. Told to do so by a Poison Control Center or Doctor. Vomiting may off-gas and release phosphine, which could pose a fire hazard. Keep off of SKIN OR CLOTHES. Brush or shake out clothing and clothes in well-ventilated areas. Store in a cool, dry, dark place. Store properly prepared flasks in a fire-resistant fireproof box. Return all intact aluminum flasks to cardboard or other suitable packaging which has been properly marked according to DOT regulations.

Notify chemical producer immediately. Follow local regulations.

If aluminum flasks have been punctured or damaged so as to leak, the container may be temporarily repaired with aluminum tape or the WEEVIL-CIDE® Pellets will be a grayish-white powder and contain only a small amount of unreacted aluminum phosphide. However, residual dust from incompletely exposed WEEVIL-CIDE® Pellets may require special care.

Pellets will greatly accelerate the production of hydrogen phosphide gas which could result in a toxic and/or fire hazard. Wear gloves of cotton or other material when handling aluminum phosphide.

Aluminum phosphide in WEEVIL-CIDE® Pellets reacts with moisture from the air, water, acids and many other liquids to release white powder and contain only a small amount of unreacted aluminum phosphide. However, residual dust from incompletely exposed WEEVIL-CIDE® Pellets may require special care.
