DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Follow all applicable directions, restrictions and precautions on the federally-registered label.

This label and the entire Satellite HydroCap herbicide label, EPA Reg. No. 70506-230, must be in the possession of the user at the time of pesticide application.

This Supplemental Label expires March 1, 2020 and must not be used or distributed after this date.

CAUTION
KEEP OUT OF REACH OF CHILDREN

For Use in Crops in the Bushberry Crop Group
Aronia berry, Blueberry (highbush, lowbush), buffalo currant, Chilean guava, Cranberry (highbush), Currant (black, red), Elderberry, European barberry, Gooseberry, Honeysuckle (edible), Huckleberry, Jostaberry, Juneberry (Saskatoon berry), Lingonberry, Native currant, Salal, Sea buckthorn

For Use in Crops in the Caneberry Crop Group
Blackberry, Loganberry, Raspberry (black, red, wild)

Application Method:  Apply by ground only, including by chemigation, flood, flooded basin, and gravity flow irrigation systems.

Use Methods, Timings and Use Rates
Apply either in a single application or sequentially with an interval of 30 days or more. Apply Satellite HydroCap herbicide at between 2.0 to 6.3 quarts per acre depending on the grower’s weed control program, level of weed infestation, and desired use strategy (see chart below) per application, not exceeding a total of 6.3 quarts/A per year in bushberries and caneberries.

| Low use rate | 2.0 quarts (2 lbs ai/A) |
| High use rate | 4.0 - 6.3 quarts (4 - 6 lbs ai/A) |

Ground Applications (Bearing)
Use Satellite HydroCap herbicide surface incorporated or (surface) preemergence. Apply Satellite HydroCap herbicide as a broadcast or banded treatment using ground equipment before weed germination. Apply the spray directly to the ground beneath the bushes and/or in areas between rows or trellised rows. Do not apply over the top of bushes, canes, or primocanes with leaves, buds, or fruit because this may cause injury.
Application may be made to (wild) lowbush blueberries after spring or fall pruning but before emergence of new growth in the spring. **Satellite HydroCap herbicide** may be applied over the top of dormant bushes before new growth/emergence in the spring; DO NOT apply over the top of (wild) lowbush blueberries if new spring growth or emergence is imminent.

**Ground Applications (Nonbearing)**
Apply for preplant incorporated, preplant surface, surface incorporated, or preemergence weed control in nonbearing bushberries and caneberries. **Satellite HydroCap herbicide** may be used before or after transplanting and the establishment of the nonbearing crops.

**Preplant Surface**
Prior to transplanting, apply uniformly with ground equipment. Avoid allowing roots to contact treated soil when placing transplants into the hole, as injury may occur.

**Preplant Incorporated**
Apply **Satellite HydroCap herbicide** uniformly before transplanting but before weeds germinate. Incorporate to a depth of 1 to 2 inches. In order to avoid mechanical injury to the crop, apply and incorporate before transplanting. Avoid allowing roots to contact treated soil when placing transplants into the hole, as injury may occur.

**Preemergence**
Apply in a band or broadcast.

**Chemigation Applications**
**Satellite HydroCap herbicide** may be applied through sprinkler irrigation and drip irrigation systems. Follow all directions, special instructions, and precautions about chemigation in the Spraying Instructions section of the product label. Do not apply **Satellite HydroCap herbicide**-treated irrigation water over top of bushes, canes or primocanes with leaves or buds or fruit. Contact with these plant parts by spray mixture may cause injury.

**Flood, Flooded Basin, and Gravity Flow Irrigation Systems** – **Satellite HydroCap herbicide** may be applied through these types of systems. Follow all directions, special instructions, and precautions about chemigation in the Spraying Instructions section of the product label.

**Restrictions**
- Preharvest Interval (PHI): 30 days.
- Do not apply more than 6.3 quarts of **Satellite HydroCap herbicide** per acre per year.
- Do not apply by air.
- Do not feed forage or graze livestock in treated fields or plantings.
- Do not apply to newly seeded nursery stock.
