It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This product is used to control the growth of algae in swimming pools, heated swimming pools, fountains, exterior spas, whirlpools, hot tubs and decorative fountains that do not contain fish. It is also used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers and recirculating systems.

WATER COOLING TOWERS: Prior to the use of this product in water cooling towers, clean the systems to remove algal growth, microbiological slime, and other deposits. Then make an initial slug addition of 4 to 10 fluid ounces of this product per 100,000 gallons of water to provide 32 to 80 ppm this product, based on the total weight of water in the system. Repeat initial dosage until control is evident. Make subsequent slug additions of 1 to 0.5 fluid ounces of this product per 1000 gallons of water (8 to 0.8 ppm) every 2 to 5 days as needed. The frequency of addition depends upon the relative amount of bloom and the severity of the microbiological problem. Make slug additions into the sump of water cooling towers.

SWIMMING POOLS, HEATED SWIMMING POOLS, EXTERIOR SPAS, WHIRLPOOLS AND HOT TUBS: For maximum effectiveness of this product in pools, spas, whirlpools, hot tubs, clean these systems with heavy growth of algae prior to using this product. For pools having just visible algae growth, add an initial dose of 50 to 70 fluid ounces of this product per 100,000 gallons of water and remove settleable algae debris by cleaning. For treatment of a freshly cleaned and filled pool, add initially 0 to 50 fluid ounces of this product per 10,000 gallons of water. To maintain pools free of visible algae growth, make subsequent additions of 9 to 10 fluid ounces of this product per 10,000 gallons of water every 5 to 7 days after initial treatment. Uniform distribution of this product throughout the water in the pool is necessary for maximum effectiveness.

Swimming pool operators must prevent growth of algae during the off-season winter months when pools are not in use. For pools with a water flow exceeding 2000 gallons per minute, the swimming season will be free of visible algae, added at 27 to 43 fluid ounces of algicide per 10,000 gallons of water. If, at the end of the swimming season, pools have some visible algae growth, add 50 to 77 fluid ounces per 10,000 gallons of water. It is necessary that a uniform distribution of algicide throughout the water and the pool be made for maximum effectiveness. If the pool is not covered, it may be necessary to repeat the treatment one or more times during the season.

This product is compatible with those chemicals normally used to treat pools and spas and is effective at both acidic and alkaline pH. This product can be used in pools and spas treated with chlorine chemicals and may reduce the amount of those chemicals normally required. However, do not mix this product with concentrated dry or liquid chlorine products.

DECORATIVE FOUNTAINS: This product is used to control algae in decorative fountains that do not contain fish. Manually clean heavy growths of algae prior to treatment. Fountains with just visible algae growth require an initial dose of 5 to 8 fluid ounces of this product per 100,000 gallons of water. To treat a freshly cleaned and filled waterway, add 0 to 5 fluid ounces of this product per 10,000 gallons of water. For maintenance additions, add 1 to 2 fluid ounces of this product per 10,000 gallons of water every 5 to 7 days after initial dose for maintenance.

INDUSTRIAL AIR WASHING SYSTEMS: This product is used to control bacteria in industrial air washing systems that maintain adequate pH. This product can be used in pools and spas treated with chlorine chemicals and may reduce the amount of those chemicals normally required. However, do not mix this product with concentrated dry or liquid chlorine products.

This product is used to control bacteria in industrial air washing systems that maintain adequate pH.

DIRECTIONS FOR USE

STORAGE AND DISPOSAL

Nonrefillable Container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and clean equipment thoroughly. Rinse equipment with water for 30 seconds. Stand the container on its end and tip it back and forth, ensuring at least one complete revolution, for 30 seconds. Repeat this procedure two more times.

Then offer for recycling if available or reconditioning, if appropriate, or by other procedures if approved by state and local authorities.

Nonrefillable Container, capacity of greater than 5 gallons

Commercial use only. Do not pour on water, food, soil or into drain or sewer. Contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Residential/Homeowner

STORAGE AND DISPOSAL: Keep container closed when not in use and away from children and persons unfamiliar with its use. Store away from food. Leaking or damaged containers must be placed in a plastic bag and discarded in the trash. Mop up spills with clean water. Nonrefillable container. Do not reuse or refill empty container. Wrap container in place and dispose. Before use:

Pesticide wastes may be hazardous. Improper disposal of sewage, pesticides, spray residues, or containers may result in violation of Federal law. If these wastes are emptied into or upon any water, soil, or other land, or into any storm drain or ditch, you may be subject to civil or criminal penalties.

STORAGE: Keep container closed when not in use. In case of spills, use sawdust or sand to absorb the spilled pesticide and dispose of in a sanitary landfill. Do not contaminate water, food, soil or into drain or sewer. Contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.
