REVENGE

Kills Gophers, Moles, Woodchucks, Rats, Skunks and Ground Squirrels

THIS PRODUCT MAY BE USED ON LAWNS, PARKS, GOLF COURSES, RANGELAND AND REFORESTED AREAS, OPEN FIELDS, MEADOWS, AND NON-CROP AREAS.

ACTIVE INGREDIENTS: Sulfur 39.4%, Potassium Nitrate 38.8%, Charcoal 12.5%. INERT INGREDIENTS: 12.5%, TOTAL 100.0%.

KEEP OUT OF REACH OF CHILDREN

WARNING USE BACK PANEL FOR ADDITIONAL PRECAUTIONARY STATEMENTS.

NET WT. 8 oz. (227g.) WHEN PACKED CONTENTS 4 UNITS

USE ONLY FOR RATS IN N.C. • NOT FOR MOLE USE IN INDIANA
**REVENGE**

**RODENT SMOKE BOMB**

**AN EFFECTIVE, QUICK AND RELIABLE CONTROL PRODUCT FOR GOPHERS, MOLES, WOODCHUCKS, RATS, SKUNKS AND GROUND SQUIRRELS. THE SMOKE WILL PENETRATE DEEPLY INTO TUNNELS TO DO THE JOB. CALL US FOR FREE EXTRA TIPS AT 1-800-431-5500.**

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

**USE RESTRICTIONS:** This product may be used to control pocket gophers, moles, woodchucks, Norway rats, skunks, and ground squirrel on lawns, parks, golf courses, range land,3 athletic fields, open fields, meadows, and non-crop areas. Do not use anywhere where use of gas cartridges is prohibited by local ordinances.

Insert cartridges into burrow, fuse-end-first immediately after fuse is lit. Do not hold burning cartridges in your hand. Do not use cartridges where vegetation is dry and likely to catch fire. Carefully observe areas to be treated. Apply cartridges only to burrow systems. Do not apply cartridges to burrows or dens known to contain non-target vertebrate animals. Before using product, read the entire label including the section titled Endangered Species Considerations.

**APPLICATION DIRECTIONS:** Before using this product, follow these steps:

1. Read and understand the specific directions for the type of animal that you intend to control.
2. Collect amounts of soil, rocks, and other noncombustible materials sufficient for closing burrow systems.
3. Test to make sure that holes into which cartridges are to be placed are large enough for easy, fuse-end-first insertion.
4. Assume a position that will permit you to light fusion and promptly insert cartridge into burrow. The minimum fusion burn time is 5 seconds. Try to avoid breathing cartridge smoke.

The effectiveness of this product will be limited under conditions of dry or porous soil which permit the escape of toxic gases from treated burrows.

**WOODCHUCKS:** Locate all burrow entrances if possible. Select one for treatment and close all others with rocks and soil. Light fuse and insert cartridge fuse-end-first, being careful not to smother cartridge. Consult state game laws before using this product for woodchuck control.

**GROUND SQUIRRELS:** Treat each burrow opening by lighting fuse and inserting cartridge into hole fuse-end-first. (Make sure burrow is large enough for easy insertion of cartridge before lighting fuse.) Cover burrow opening immediately, taking care not to smother cartridge with loose soil. Immediately cover all cracks or burrow openings from which gas escapes. Proceed to the nearest open burrow and follow same procedures.

**POCKET Gophers:** Locate fan-shaped mounds with signs of recent pocket gopher activity. Find the holes in the center of the mound and make a 15-18 inch cut on one side of the depression. The main runway has been located when ground friction on the probe releases. Dig down to main runway, taking care not to block it off with dirt. (If uncertain whether systems are active, mark open burrows with flags or stakes and return 24 hours later to treat all systems which have been closed by pocket gophers). Create an opening large enough for easy insertion of the cartridge, Light fuse and insert cartridge fuse-end-first. Immediately cover opening, taking care not to smother cartridge with loose dirt. Cover all nearby cracks or other openings in soil from which gas escapes. Treat all active mounds.

**MOLES:** If possible, treat main runways. To locate main runways, look for a series of fresh conical mounds of dirt. (If uncertain whether moles are active in the area, flatten portions of any surface ridges found near mounds. If ridges are reconstructed 24 hours later, a mole is active in the system.) Select the freshet conical mound and remove the plug and dig in direction of main runway. If lateral tunnel to mound is plugged, either dig past the plug or use a metal rod or similar implement to probe ground around plug to locate main runway. Main runway will be found when probe meets little or no soil resistance. When runway is found, prepare an opening into runway large enough so that cartridge can be inserted easily. Light fuse and insert cartridge into hole fuse-end-first. Cover cartridge quickly, but take care not to smother it with loose dirt. Quickly close any holes where gas escapes. If your excavations have divided main runway into sections, treat each portion.

**NORWAY RATS:** Use only where burrows are isolated from homes, barns, and all other man-made structures. DO NOT USE inside buildings or anywhere where gases could enter buildings. Treat each burrow opening by lighting fuse and inserting cartridge fuse-end-first into hole. (Make sure hole is large enough for easy insertion before lighting fuse.) Cover hole immediately, taking care not to cover cartridge with loose dirt. Immediately cover all other openings from which gas escapes. Proceed to the next closest burrow and treat as above.

**SKUNKS:** Locate all entrances to den. DO NOT treat dens under inhabited structures or buildings where toxic gases could reach humans, pets, or domestic animals including livestock. Openings to dens should be large enough to permit easy insertion of cartridge. Close all known openings to den other than the one to be treated. Use dirt, sod, and/or large rocks for this purpose. Light fuse and insert cartridge fuse-end-first. Close opening, being careful not to cover cartridge with dirt. Close any previously undetected openings where gas escapes.

**FOR LARGE ANIMALS OR LONGER RUNWAYS, USE MORE THAN ONE CARTRIDGE.**

**NOT FOR MOLE USE IN INDIANA**

**USE ONLY FOR RATS IN N.C.**

**PRECAUTIONARY STATEMENTS**

Hazards to humans and domestic animals:

**WARNING:** After ignition, cartridge produces a foul-smelling, smoky mixture of gases, (including carbon monoxide, carbon dioxide, and nitrogen) and solids (including potassium carbonate, potassium sulfate, sulfides and uncombined carbon). Fumes may be harmful if inhaled.

**STATEMENT OF PRACTICAL TREATMENT:** If inhaled, and person has poisoning symptoms (headache, nausea, dizziness, and weakness), have individual ingest fresh air. Have victim lie down and keep warm. If respiration is inadequate, recovery will be rapid. If breathing has stopped, use artificial respiration. If available, pure oxygen should be used. Call a physician immediately.

**STORAGE AND DISPOSAL:** Do not contaminate water, food or feed by storage or disposal. Storage: Store in cool, dry place away from fire, heat and direct sunlight. Pesticide Disposal: To dispose of unused cartridges, soak in water crush and bury at least 6" in soil. Consumer Disposal: Place in trash collection.

**CHEMICAL HAZARDS:** Onset of the fire, this cartridge will burn vigorously until completely spent and is capable of causing severe burns to exposed skin and clothes, and of igniting dry grass, leaves and other combustible materials.

**ABSOLUTE SATISFACTION**

DIRECTIONS: USE WITH EXTREME CAUTION

1. Read the enclosed instruction sheet and understand the specific directions for the type of animal that you intend to control.
2. Have handy a board, a garbage can (preferably metal) or a large rock to cover hole. It is recommended that safety glasses, gloves and a long sleeve shirt be worn.
3. Test to make sure that holes into which cartridges are to be placed are large enough for easy, fuse-end first, insertion.
4. Place the cartridge into the hole, being careful not to block the entrance with the cartridge. Consult state game laws before using this product for woodchuck control.

ENDANGERED SPECIES CONSIDERATIONS

1. Black-Footed Ferret: Do not use this product in the range of the Black-footed ferret. Contact the nearest U.S. Fish & Wildlife Service Office, Endangered Species Specialist, before the product is used. They will arrange for a survey of the proposed use site.
2. Utah Prairie Dog: Do not use this product in the range of the Utah Prairie Dog. (Utah)
3. San Joaquin Kit Fox: This pesticide should not be used within one mile of active dens of the San Joaquin kit fox in the following California counties: Kern, Kings, Fresno, San Luis Obispo, Merced, Monterey, Santa Barbara, Ventura, Tulare and San Benito. Prior to use, contact the California Department of Fish and Game for recommendations.
4. Blunt-Nosed Leopard Lizard: This pesticide should not be used in the range of the Blunt-nosed leopard lizard in the following California counties: Kern, Fresno, Kings, Madera, Merced and Tulare. Prior to use, contact the California Department of Fish and Game for recommendations.
5. Eastern Indigo Snake: Do not use this product in the range of the Eastern Indigo snake in the following states: Mississippi, Alabama, South Carolina, Georgia and Florida.
6. Desert Tortoise: This pesticide should not be used in the critical habitat of the Beaver Dam slope population of the Desert tortoise in Utah. This comprises an area extending from the southwest facing slope of the Beaver Dam Mountains, across Highway 91, west along the Arizona border and 10 miles to the Nevada border.

FOR BEST RESULTS, USE ALL CARTRIDGES.

1. Woodchucks: Locate all burrow entrances if possible. Select one for treatment and close all others with rocks and soil. Light fuse and insert cartridge fuse-end first, being careful not to smother cartridge. Consult state game laws before using this product for woodchuck control.
