Prowler

PALATABLE FORMULA

RESULTS GUARANTEED

WITH

Bromethalin

KILLS RATS, MICE & MEADOW VOLES*

Net Weight: 5 lbs (2.26 kg)

ACTIVE INGREDIENT: Bromethalin (CAS #63333-35-7): 0.01%

OTHER INGREDIENTS: 99.99%

†Contains Denatonium Benzoate TOTAL 100.00%

KEEP OUT OF REACH OF CHILDREN

CAUTION

See back panels for First Aid, additional Precautionary Statements, and Directions for Use.

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.

RESULTS GUARANTEED

†Bell Laboratories, Inc.

GUARANTEE: If for any reason you, the consumer, are not satisfied with this product, mail us your original proof of purchase to obtain a full refund of your purchase price.

**FIRST AID**

**HAVE LABEL WHEN OBTAINING TREATMENT ADVICE**

If swallowed:
- Call a poison control center, doctor, or 1-877-654-3944 immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not give anything by mouth to an unconscious person.
- Do not induce vomiting unless told to do so by the poison control center or doctor.

**TREATMENT FOR PET POISONING**

If an animal eats this bait, call a veterinarian or 1-877-654-3944 at once.

**NOTE TO PHYSICIAN OR VETERINARIAN**

Contains the nerve poison bromethalin. This product is not an anticoagulant type rodenticide. For humans or animals ingesting bait and/or showing poisoning signs (such as muscle tremors, loss of hind limb use, or seizures for animals), limit absorption by either emesis or gastric lavage. Subtlethral symptoms, if present, would be the result of cerebral edema and should be treated accordingly through administration of an osmotic diuretic and corticosteroid.

**PRECAUTIONARY STATEMENTS**

**Hazards to Humans and Domestic Animals**

**CAUTION:** Harmful if swallowed. Keep away from children, domestic animals and pets.

All handlers (including applicators) must wear shoes plus socks, and waterproof gloves. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

**User Safety Requirements**

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing them. As soon as possible, wash hands thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

**ENVIRONMENTAL HAZARDS**

This product is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water, or to areas where surface waters present or to intertidal areas below the mean high water mark. Runoff also may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment wash water or waste.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. **READ THIS LABEL:** Read the entire label and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on this label.

**IMPORTANT:** Do not expose children, pets, or non-target animals to rodenticides. To help prevent exposure:
1. Store unused product out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife, or in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children under six years of age, and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be shaken from bait stations when they are closed, units must be secured or otherwise immobilized. Stronger bait stations are needed in areas open to hoofed livestock, raccoons, bears or other potentially destructive animals, or in areas prone to vandalism.
3. Dispose of product container and unused, spoiled or un consumed bait as specified on this label.

Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used whenever children, pets, non-target mammals or birds may have access to the bait placement location.

**USE RESTRICTIONS:** This product may only be used to control the following rodent pests in and around buildings and man-made structures: House mouse (*Mus musculus*), NORWAY RATS, ROOF RATS AND HOUSE MICE

(Continued from other panel)

(Chloethys mubellii), Polynesian rat (*Rattus exulans*), Meadow vole* (*Microtus pennsylvanicus*), White-footed woodrat* (*Neotoma albigula*), Southern plains woodrat* (*Neotoma micropus*), and Mexican woodrat* (*Neotoma maculosa*). This product must be used in and within 100 feet of man-made structures constructed in a manner so as to be vulnerable to commercial rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (trucks, trains, aircraft), docks and port or terminal buildings and related structures around and associated with these sites. Fence and perimeter baiting, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops.

**Prowler® Pelleted Bait** may be applied to active rodent burrows to control rats within or beyond 100 feet of buildings and man-made structures, provided that infestations of these rodents have been confirmed. Bait must be placed no less than 6 inches into active rat burrows. Do not broadcast bait. Because Norvay nor rat infestations may occur in areas farther than 100 feet from buildings and man-made structures when the rodents have ample supplies of food and cover, efforts should be made to remove food, trash, garbage, clutter and debris.

Do not place bait near or inside ventilation duct openings. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or milk handling equipment or surfaces that come into direct contact with food. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations.

Do not sell this product in individual containers holding less than 4 pounds of bait.

**SELECTION OF TREATMENT AREAS:** Determine the area's rodent problem by evaluating the following:

- Rice vole or field mouse or meadow vole will likely find and consume the bait. Generally, these areas are along walls, by gnawed openings, in corners and concealed places, between floors and walls, or in locations where signs of rodents have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

**APPLICATION DIRECTIONS:** The active ingredient in this product is different from anticoagulant rodenticides. Individual rats and mice typically feed less or cease feeding altogether after consuming a toxic dose.

**Rats:** Apply 1 to 6 ounces of bait per placement (usually at intervals of 15 to 30 feet.). Adjust the amount of bait applied to the level of rat feeding expected at each bait placement.

For treating burrows, use a long-handled scooper to place ¼ to 1 ounce of bait deep into each active burrow entrance. Close burrows with soil 3 to 7 days after application. Rats are entombed within replete burrows that are reopened by rats. If the area where treated burrows are located is accessible to children and non-target animals, check burrows every morning and evening to make sure that they have not been pushed out of burrows. Remove and properly dispose of any bait that has become accessible to children or non-target animals.

**Mice and Meadow Voles:** Apply ¼ to 1 ounce of bait per placement. Space placements at intervals of 8 to 12 feet in infested areas. Larger placements, up to 2 ounces, may be applied at points of extremely high mouse or meadow vole activity.

**Baiting Strategy:** Highest bait consumption is expected to occur on the first day or two after treatment begins. After several days, inspect the placement and replenish bait stations at sites where there is evidence of heavy feeding or where there is continued evidence of rodent activity. Normally, the volume of bait consumed will be significantly less with bromethalin baits than with anticoagulant baits. Although one night’s feeding will usually provide a lethal dose for mice and rats, maintain bait for at least one week to provide all individuals a chance to feed on the bait. Continue baiting until all signs of feeding have ceased.

**FOLLOW-UP:** Replace contaminated or spoiled bait immediately. Wearing waterproof gloves, collect and dispose of all dead, exposed animals and leftover bait. To discourage reinfection, limit sources of rodent food, water, and harborage as much as possible. If reinfection does occur, repeat treatment. Where a continuous source of infestation is present, establish permanent bait stations and replenish them as needed.
