NEW KILLS RATS, MICE & MEADOW VOLES

**Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat**

**Net Weight:**
4 lbs (1.81 kg)

**ACTIVE INGREDIENT:**
Bromethalin (CAS 66333-35-7) . . . . . . 0.01%

**OTHER INGREDIENTS†:** . . . . . . . . . . . . . . . . . . . . 99.99%

†Contains Denatonium Benzoate

**TOTAL 100.00%**

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**
See Back Panel for First Aid and additional precautionary statements.

*This Product May Only be Used Inside and Within 100 Feet of Man-made Structures*

*based on no-choice laboratory testing

FIRST AID

HAVE LABEL WITH YOU WHEN OBTAINING TREATMENT ADVICE

IF SWALLOWED:
• Call a poison control center, doctor, or 1-877-864-2044 immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

TREATMENT FOR PET POISONING
If an animal eats this bait, call a veterinarian at once.

NOTE TO PHYSICIAN OR VETERINARIAN
Contains the nerve poison Bromethalin. This product is not an anticoagulant type rodenticide. For humans or animals ingesting bait and/or showing poisoning signs (such as muscle tremors, loss of hind limb use, or seizures for animals), limit absorption by either emesis or gastric lavage. Sublethal symptoms, if present, would be the result of cerebral edema and should be treated accordingly through administration of an osmotic diuretic and corticosteroids.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

READ THIS LABEL: Read this entire label and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on this label.

IMPORTANT: Do not expose children, pets, or non-target animals to rodenticides. To help prevent exposure:
1. Store unused product out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife, or in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children under six years of age, and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be shaken from bait stations when they are filled, units must be secured or otherwise immobilized. Stronger bait stations are needed in areas open to hoofed livestock, raccoons, bears or other potentially destructive animals, or in areas prone to vandalism.
3. Dispose of product container and unused, spoiled or uncompleted bait as specified on this label.

Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used wherever children, pets, non-target mammals or birds may have access to the bait placement location.

USE RESTRICTIONS: This product may only be used to control the following rodent pests in and around man-made structures: House mouse (Mus musculus), Norway rat (Rattus norvegicus), Roof rat (Rattus rattus), Cotton rat (Sigmodon hispidus), Eastern harvest mouse (Reithrodontomys hudsoni), Golden mouse (Ochrotomys nuttalli), Polish rat (Rattus oxidentis), Meadow vole* (Microtus pennsylvanicus), White-throated woodrat* (Neotoma albifrons), Southern plains woodrat* (Neotoma micropus), and Mexican woodrat* (Neotoma mexicana). This product must be used in and within 100 feet of man-made structures constructed in a manner so as to be vulnerable to commensal rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft), docks and port or terminal buildings and related structures around and associated with these sites. Fenceline and perimeter baiting, beyond 100 feet from a structure, is prohibited. This product must not be applied directly to food or feed crops. Burrow baiting with PROWLER Bait Chunx is prohibited.

Do not place bait near or inside ventilation duct openings. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or meat handling equipment or surfaces that come into direct contact with food. When used in USA inspected facilities, this product must be applied in tamper-resistant bait stations. Do not broadcast bait.

XXXX

USE RESTRICTIONS (Continued from other panel)
Do not sell this product in individual containers holding less than 4 pounds of bait.

SELECTION OF TREATMENT AREAS: Determine areas where rats, mice or meadow voles* will most likely find and consume the bait. Generally, these areas are along walls, by gnawed openings, in corners and concealed places, between floors and walls, or in locations where signs of rodents have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

APPLICATION DIRECTIONS:
Rats: Place 2 to 12 blocks per placement (usually at intervals of 15 to 30 feet). Adjust the amount of bait applied to the level of rat feeding expected at each bait placement.

Mice: For use in sewers, thread wire through block and securely attach to a stationary structure such as the bottom step of a manhole ladder or a sewer grate. Allow just enough wire for the block to rest on manhole benches. If benches are not present, suspend block a few inches above the high water mark or secure block on a board supported by opposing steps of the ladder. Securing block in this manner may inhibit removal by rats or water. Use at least 15 blocks per manhole. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there no longer are fresh signs of rat activity.

Mice and Meadow Voles*: Use 1 bait block per placement. Space placements at intervals of 8 to 12 feet in infested areas. Larger placements, up to 2 blocks, may be needed at points of extremely high mouse or meadow vole activity.

Baiting Strategy: Highest bait consumption is expected to occur on the first day or two after treatment begins. After several days, inspect the placement and replenish bait at sites where there is evidence of heavy feeding or where there is continued evidence of rodent activity.

Normally, the volume of bait consumed will be significantly less with bromethalin baits than with anticoagulant baits. Although one夜晚’s feeding will usually provide a lethal dose, maintain bait for at least one week to provide all rodents a chance to feed on the bait. Continue baiting until all signs of feeding have ceased.

FOLLOW-UP: Replace contaminated or spoiled bait immediately. Using gloves, collect and properly dispose of all dead, exposed animals and leftover bait. To discourage reinfection, limit sources of rodent food, water, and harborage as much as possible. If reinfection does occur, repeat treatment. Where a continuous source of infestation is present, establish permanent bait stations and replenish them as needed.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION: Harmful if swallowed. Keep away from children, domestic animals and pets.

All handlers (including applicators) must wear shoes plus socks, and gloves. Any person who retrieves carcasses or unused bait following application of this product must wear gloves.

User Safety Requirements

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash outside of gloves before removing them. As soon as possible, wash hands thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff also may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment wash water or rinsates.

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polishian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.
