RESTRICTED USE PESTICIDE

Due to eye and skin effects. For retail sale to and use by Certified Applicators, or persons under their direct supervision, and only for those uses covered by the Certified Applicator’s certification.

FIFRA SECTION 24(c) SPECIAL LOCAL NEED LABEL (SLN)
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON

Comite®
AGRICULTURAL MITICIDE

EPA Reg. No. 400-104
EPA SLN No. OR-200010

REDUCED APPLICATION TIME INTERVAL FOR POTATOES

This label is valid until December 31, 2025 or until otherwise amended, withdrawn, canceled, or suspended.

ACTIVE INGREDIENT: % BY WT.
Propargite (Sulfurous acid, 2-[4-(1,1-dimethyl-ethyl) phenoxy] cyclohexyl-2-propynyl ester)* .............................................. 73.6%
OTHER INGREDIENTS: .......................................................................................................................................................... 26.4%
TOTAL: ............................................................................................................................................................................. 100.0%

*Contains 6.55 lbs. active ingredient per gallon.
*Contains petroleum distillates.

KEEP OUT OF REACH OF CHILDREN
DANGER / PELEGRRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

ENVIRONMENTAL HAZARDS
This pesticide is toxic to fish and aquatic invertebrates and may cause reproductive effects in wildlife. Do not apply directly to water or areas where surface water is present or to intertidal areas below the mean high water mark. Runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash water.

DIRECTIONS FOR USE

• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This Special Local Need (SLN) label and the federal label for this product must be in the possession of the user at the time of pesticide application.
• Follow all applicable directions, precautions, restrictions, and Worker Protection Standard requirements on the main product label for COMITE®, EPA Reg. No. 400-104, and on this SLN label.
• Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State Tribe, consult the agency responsible for pesticide regulation.

GENERAL INSTRUCTIONS
COMITE is a liquid emulsifiable concentrate for preparing sprays to control mites.
COMITE is not systemic in action, therefore, complete coverage of both upper and lower leaf surfaces is necessary for effective control.

MIXING INSTRUCTIONS
After three-quarters full of water, add recommended dosage (from table) of COMITE to the spray tank. Fill tank, agitate and spray thoroughly to cover foliage for best results.

Ground Application: Apply in 20 - 50 gallons total volume per acre.
Aerial Application: Apply in a minimum of 10 gallons total volume per acre.
Chemigation Application: Apply in 0.1-0.2 acre inches of water. (See CHEMIGATION PRECAUTIONS FOR CORN AND POTATOES section of main product label)

POTATO RESTRICTIONS:
Apply no more than 80 fl. oz. COMITE (4.1 lbs. propargite a.i.) per acre per year. Do not make more than 2 applications per season.

Minimum Spray Interval: 14 days between applications.

Restricted Entry Interval (REI): 2 days. See AGRICULTURAL USE REQUIREMENTS section of main product label for general REI exemptions. There is no exception allowed for hand weeding or thinning.

Pre-harvest Interval: Do not harvest within 14 days of the last application.

RESTRICTIONS/PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS:
- Do not apply by ground within 50 feet or by air within 75 feet of lakes, reservoirs, rivers, permanent streams, marshes, natural ponds, estuaries, or commercial fish farm ponds.
- The above excludes irrigation canals and wasteways as well as man-made irrigation conveyance structures and impoundments, unless an exclusion contains water year-round.
- Risk of exposure to sensitive aquatic areas can be reduced by making applications when the wind direction is away from the aquatic area.

RUNOFF PRECAUTIONS:
- Under some conditions, propargite may have a high potential for runoff into surface water for several days after application.
- Do not apply in the following areas:
  - Frequently flooded areas (excluding crop irrigation areas).
  - Areas where intense or sustained rainfall is forecasted to occur within 48 hours.
- Care should be taken when making applications where the following conditions exist:
  - Poorly draining or wet soils with readily visible slopes toward adjacent surface water.
  - Areas with in-field canals or ditches that drain to surface water.
  - Areas not separated from adjacent surface waters with vegetated filter.
- Consult your soil conservation service for recommendations in your use area.

ENDANGERED/THREATENED SPECIES:
- You may contact the Oregon Department of Fish & Wildlife, National Marine Fisheries Service or US Fish & Wildlife Service for information on listed threatened or endangered species.

THIS LABEL IS IN ADDITION TO THE STANDARD FEDERAL LABEL PRINTED ON THE CONTAINER

Follow all applicable directions, restrictions, and precautions on the EPA registered label.
This label must be in the possession of the user at the time of the pesticide application.

RE: **New Special Local Need Registration** (replacement for EPA SLN No. OR-080019)
MacDermid Agricultural Solutions / Comite® (a.i. propargite)
EPA Reg. No. 400-104, **EPA SLN No. OR-200010**
Site/Purpose: Potatoes, reduced application time interval

The Oregon Department of Agriculture (ODA) is pleased to enclose SLN No. OR-200010, a Special Local Need registration under FIFRA Section 24(c), to allow use of the MacDermid Agricultural Solutions product Comite®, EPA Reg. No. 400-104, with a reduced application time interval of 14 days, for control of twospotted spider mites in potatoes grown in Oregon.

The FIFRA Section 3 label for Comite® has directions for use on potatoes (limited to Pacific Northwest states only) that allow "... 2 applications per season; the minimum spray interval is 21 days (14 days in Washington only)." ODA has had SLN registrations since 2003 to also allow the 14-day minimum spray interval for potatoes grown in Oregon. Research/Extension entomologists with Oregon State University who are experienced with mite control programs for potatoes report that the improved efficacy of Comite® from reducing the interval between applications to 14 days is essential for season-long mite suppression.

As with our predecessor SLNs for this same use, the maximum application rate, number of applications, total maximum amount applied per season, and preharvest interval (PHI) under SLN No. OR-200010 remain exactly the same as on the Section 3 registration. Based upon residue data submitted several years ago, there is no concern about increased residue levels in the harvested potatoes as a result of this reduction in the application time interval. This use of Comite® on potatoes is supported by the propargite residue tolerance of 0.1 ppm in/on potato established in 40 CFR 180.259.

SLN No. OR-200010 is a direct replacement for SLN No. OR-080019 (for use of Chemtura Corporation brand Comite®). OR-080019 has been cancelled since the federal registration of the product has been transferred to MacDermid Agricultural Solutions. Except for some minor formatting changes, the SLN No. OR-200010 label is identical to the predecessor SLN label.

Please do not hesitate to contact me if you have any questions about this SLN.
Sincerely yours,

David L. Priebe
