FIFRA Section 24(c) Special Local Need Label (SLN)

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON

GALIGAN® 2E

EPA Reg. No. 66222-28  EPA SLN No. OR-210001

For Control of Broadleaf Weeds (Cheeseweed, Filaree, Groundsel, Henbit, Speedwell) in Red Clover and White Clover Grown for Seed

This label is valid until December 31, 2026 or until otherwise amended, withdrawn, cancelled, or suspended.

Active Ingredient: % by WT.
Oxyfluorfen: 2-chloro-1-(3-ethoxy-4-nitrophenoxy)-4-(trifluoromethyl) benzene* ............... 22.2%
Other Ingredients........................................................................................................................................... 77.8%
Total: ...................................................................................................................................................... 100.0%

*Equivalent to 2 lbs. active ingredient per gallon.
Contains petroleum distillate.

KEEP OUT OF REACH OF CHILDREN

WARNING-AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail).

ENVIRONMENTAL HAZARDS

This product is toxic to aquatic invertebrates and wildlife. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. See DIRECTIONS FOR USE for additional restrictions. Do not contaminate water when disposing of equipment washwaters.

DIRECTIONS FOR USE

• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This Section 24(c) Special Local Need (SLN) label and the Galigan 2E main product container labeling must be in the possession of the user at the time of pesticide application.
• Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered Galigan 2E product label, and this SLN label.

Use Instructions for Red Clover and White Clover Grown for Seed

Application Rate and Spray Volume
Galigan 2E may be applied at 2 to 6 fl. oz. (0.03 to 0.09 lb a.i.) per acre. Use lower rate in the rate range to control labeled weeds when applied preemergence or early postemergence up to the 6-leaf stage. Use higher rate for longer residual control of labeled weeds. Use a maximum of 6 fl. Oz. of product per growing season.

Apply Galigan 2E in a minimum spray volume of 20 gallons of water per acre. Spray volume should be increased as weed height and density increase. Use a low-pressure spray equipped with flat fan nozzles.
Application Timing
Make applications to established, dormant clover grown for seed only. For clover grown west of the Cascade Mountain Range, the dormancy period is generally from December 1 through February 15. For clover grown east of the Cascades, the dormancy period may extend from November 15 through March 1. Post emergence applications will cause burning, crinkling or bronzing of clover foliage, particularly to the youngest trifoliates or buds present at the time of application. Temporary growth suppression may also result.

Specific Use Restrictions
The following use restrictions must be observed when Galigan 2E herbicide is used as recommended on this label:
- Do not apply more than 6 fl. oz. (0.09 lb a.i.) of Galigan 2E per acre per application or more than 6 fl. oz. per acre per growing season.
- Apply with ground application equipment only.
- Apply only to healthy red clover or white clover. Do not apply to clover that has been weakened by disease, drought, excessive fertilizer or soil salts, freezing, nematodes, soil insects, winter injury, frost damage, flooding, hail or previously applied pesticides as severe injury may result.
- Do not enter or allow worker entry into treated areas during restricted entry interval (REI) of 24 hours. Refer to the label affixed to the Galigan 2E container for additional information concerning early entry of workers to treated areas.

Spray Drift Buffer Restrictions
- A 25 ft. vegetative buffer strip must be maintained between all areas treated with this product and lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish ponds.
- Do not allow spray to drift from the application site and contact people, structures people occupy at any time and the associated property, parks and recreational areas, non-target crops, aquatic and wetland areas, woodlands, pastures, rangelands, or animals.
- For groundboom applications, apply with nozzle height no more than 4 feet above the ground or crop canopy and when wind speed is 10 mph or less at the application site as measured by an anemometer.
- Use coarse spray according to ASAE 572 definition for standard nozzles or VMD of 475 microns for spinning atomizer nozzles.
- The applicator also must use all other measures necessary to control drift

Rotation Crop Restrictions
- Do not rotate to small-grain crops (includes barley, buckwheat, corn, pearl millet, proso millet, oats, popcorn, rice, rye, sorghum, triticale, wheat, wild rice) within 10 months following Galigan 2E treatment.
- Do not direct seed any crops other than Galigan 2E- labeled crops within 60 days following a Galigan 2E treatment.
- Do not transplant seedling crops other than Galigan 2E- labeled crops within 30 days following a Galigan 2E treatment.

Important: Treated soil must be thoroughly incorporated to a depth of 4 inches after harvest (or abandoning) of the treated crop but prior to planting of the rotational crop. Failure to achieve this thorough and complete incorporation or to follow the required minimum plant-back interval may result in crop injury, stand reduction, and/or vigor reduction of the plant-back crop. See product label for specific fallow bed crop planting information for applications of Galigan 2E made to a fallow bed or fallow field.

Special Crop Use Restrictions
The pesticide applicator, the producer of the crop, and the seed conditioner must be aware that use of this product according to this labeling is deemed a non-feed/non-food use by the Oregon Department of
Agriculture, and is regulated by Oregon Administrative Rule (OAR) 603-057-0535, Pesticide Use on Crops Grown For Seed. If the applicator of this pesticide is not the producer, the applicator must provide a copy of this labeling to the producer of the crop. Producers of this crop who use this product, or cause the product to be used on a field they operate, must provide a copy of this pesticide label to the seed conditioner.

This pesticide does not have an established pesticide residue tolerance for this crop. Consequently, no portion of this seed crop may be used or distributed for food or feed for 1 year (365 days) after the last application of this product. This restriction pertains to, but is not limited to: green chop, forage, hay, pellets, meal, whole seed, cracked seed, straw, roots, bulbs, foliage or seed screenings, and to the grazing of the crop field, stubble or regrowth. All seed screenings shall be disposed of in such a manner that the screenings cannot be distributed or used for food or feed purposes, as indicated in OAR 603-057-0535. Additional regulations concerning seed screenings are stated in OAR 603-057-0535.

Any seed from a field treated with this pesticide product shall bear specific and conspicuous container labeling, or if shipped in bulk, on the shipment invoice or bill of lading. The labeling shall contain the following statement:

“This seed was produced using one or more products for which the United States Environmental Protection Agency has not established pesticide residue tolerances. This seed, in whole, as sprouts, or in any form, may not be used for human consumption or animal feed. Failure to comply with this condition may violate requirements of the Federal Food and Drug Administration, the Oregon Department of Agriculture and other regulatory agencies.”
