SECTION 24[c] REGISTRATION

Simazine 4L Flowable Herbicide (simazine) is a state restricted use pesticide and is to be distributed only by licensed pesticide dealers. Only certified applicators or persons under the direct supervision of a certified applicator may apply Simazine 4L Flowable Herbicide (simazine).

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

SIMAZINE 4L FLOWABLE HERBICIDE
EPA Reg. No. 34704-687 EPA SLN No. WA-900005

DIRECTIONS FOR USE

- IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING.
- THIS LABELING MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF APPLICATION.
- FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS, WORKER PROTECTION STANDARD REQUIREMENTS, AND PRECAUTIONS ON THE EPA REGISTERED LABEL.

Brussels Sprout and Cabbage Grown for Seed Only / Annual weeds (such as Annual bluegrass, Chickweed, Groundsel, Pineappleweed, Prostrate knotweed, Smartweed, Wild buckwheat):
Make two applications of 1.6 pints (0.8lb active ingredient) each of SIMAZINE 4L per acre. Apply as a broadcast spray in a minimum 20 gallons of water per acre by ground.

Make the first application in the fall after the start of the winter rainfall period (to control fall germinating weeds), but before the ground is frozen. Make the second application in the early spring just after the last cultivation. Because these applications are broadcast over-the-top sprays, and not directed or shielded applications, they should be made before there is any significant emergence of seedling annual weeds.

Restrictions / Precautions:
- Do not enter or allow worker entry during the restricted entry interval (REI) of 12 hours.
- Simazine is a chemical which can travel (seep or leach) through soil and can contaminate ground water which may be used as drinking water. Simazine has been found in ground water as a result of agricultural use. Users are advised not to apply Simazine where the water table (ground water) is close to the surface and where the soil is very permeable, i.e., well-drained soils such as loamy sands. Your local agricultural agencies can provide further information on the type of soil in your area and the location of ground water.
- Do not apply Simazine 4L to sand, loamy sand or gravelly areas of the field. Do not apply to areas of the field where water will accumulate.
• For use under this SLN label do not apply Simazine 4L by air or through any type of irrigation system.
• Land treated with Simazine 4L should not be planted to any crop except corn until the following year as injury may occur. After harvesting the treated crop, plow and thoroughly till the soil in the fall or spring to minimize possible injury to spring-seeded rotational crops. Avoid rotating to crops susceptible to injury from simazine.
• All Brussels sprout / cabbage seed screenings shall be disposed of in such a way that they cannot be distributed or used for human food or animal feed. The seed conditioner shall keep records of screening disposal for three years from the date of disposal and shall furnish the records to the WSDA immediately upon request. Conditioner disposal records shall consist of documentation of on-farm disposal, disposal at a controlled dumpsite, incinerator, composter, or other equivalent disposal site and shall include the lot numbers, amount of material disposed of, the growers(s), and the date of disposal.
• No portion of the Brussels sprout / cabbage plant, including but not limited to green chop, hay, pellets, meal, whole seed, cracked seed, roots, bulbs, leaves and seed screenings may be used or distributed for food or feed purposes.
• Brussels sprout / cabbage seed shall bear a tag or container label which forbids the use of the seed for human consumption or animal feed.
• Brussels sprout / cabbage seed may not be distributed for human consumption or animal feed.

WSDA Container Disposal Guidance:
• Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.

This label for Simazine 4L Flowable Herbicide expires and must not be distributed in or used in accordance with this SLN registration after December 31, 2016.
