NOTICE
Federal Law requires that this product be sold in its original container and in the quantity shown on the label.

PRECAUTIONARY STATEMENTS
Hazard to Humans and Domestic Animals
JANGER - Highly corrosive. Causes skin and eye irritation. May be fatal if swallowed. Do not get into eyes, in skin or on clothing. Wear goggles or safety glasses and rubber gloves when handling. Inhaling to nose and throat. Avoid breathing dust. Remove and wash contaminated clothing before reuse.

Environmental Hazards
This product is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewersystems without previously notifying the sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

Physical and Chemical Hazards
Strong Oxidizing Agent: Mix only with water. Use only in areas free of fire and explosion. Contamination with moisture, acids, organic matter or other chemicals will start a chemical reaction with generation of heat, liberation of hazardous gases and possible generation of fire and explosion. In case of contamination or decomposition, do not reseal container. If possible, isolate container in open air or well-ventilated area. Flood with large volumes of water, if necessary.

Active Ingredient:
Calcium Hypochlorite ........................................... 73%
Other Ingredients .................................................. 27%
Minimum Available Chlorine .................................. 70%
EPA Registration Number - 83243-I

KEEP OUT OF REACH OF CHILDREN

DANGER

FIRST AID:
IF IN EYES: Hold eyes open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present after the first 5 minutes, and continue rinsing eye. Call a poison control center or doctor for treatment advice.
IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.
IF SWALLOWED: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage. Contact 1-800-221-1222 or your poison control center for 24-hour emergency medical treatment information. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

Manufactured By:
Norwalk Wastewater Equipment Co.

Directions for Use
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Sewage & Wastewater Effluent Treatment
The distribution of sewage effluent must be evaluated by determining the total number of coliform bacteria and/or fecal coliform bacteria, as determined by the Most Probable Number (MPN) procedure, or the chlorinated effluent has been reduced to or below the maximum permissible by the controlling regulatory limitation. On the average, satisfactory disinfection of secondary wastewater effluent can be obtained when the chlorine residual is 0.5 ppm after 15 minutes contact. Although the chlorine residual is the critical factor in disinfection, the importance of controlling chlorine residual with bacteria kill must be emphasized. The MPN of the effluent, which is directly related to the water quality standards requirements, should be considered an operating standard valid only to the extent verified by the coliform quality of the effluent.

The following are critical factors affecting wastewater disinfection:
1. Mixing: It is imperative that the product be intimately mixed and completely mixed to assure reaction with every chemically active surface and visible component of the wastewater.
2. Contacting: Upon flash mixing, the flow through the system must be maintained.
3. Discharge/Residual Control: Successful disinfection is extremely dependent on contact time as much as on the amount of chlorine added. Secondary effluent should contain 0.02 to 1.0 ppm chlorine residual after a 15 to 30 minute contact time. A reasonable average of chlorine is 0.5 ppm after 15 minutes contact time.

Disinfection of Drinking Water
Public Water Systems: Begin feeding this product with a tablet hydrosolubilization tube or a free available chlorine residual of 0.2 ppm and no more than 0.5 ppm is obtained throughout the distribution system. Check water frequently with a chlorine test kit. Potentiometric testing must be conducted at a frequency no less than that prescribed by the National Interim Primary Drinking Water Regulations. Contact your local health department for further details.

Storage and Disposal
Keep this product dry in a tightly closed container when not in use. Store in a cool, dry, well-ventilated area away from heat or open flame. In case of decomposition, isolate container (if possible) and flood area with large amounts of water to dissolve all material before discarding this container. Noncombustible container. Do not re-use or refill container. Offer for recycling if available or place in trash collection. Do not containate food or feed by storage, disposal or cleaning of equipment. Rinse empty container thoroughly with water to dissolve all material prior to disposal.
