HORMEX
Rooting Powder No. 16

AN EXCELLENT STRENGTH
Especially recommended for Juniperus torulosa, Thuja pyramidalis, and other similar plants

DIRECTIONS OF USE

Take 3 parts of Hormex Rooting Powder No. 16 and mix with 1 part of water.

IMPORTANT: Hormex Rooting Powder No. 16 is not a substitute for growth regulators. It is not intended to stimulate growth, but rather to encourage root initiation.

Before application, it is recommended to mix Hormex Rooting Powder No. 16 with water in a的比例 for the specific plant being treated.

1. Prepare the rooting medium: Mix Hormex Rooting Powder No. 16 with water to a consistency suitable for your plant.

2. Apply the mixture to the plant: Pour the mixture directly onto the roots of the plant, or use it as a dip for the plant's stems.

3. Place the plant in the rooting medium: After applying the hormone mixture, place the plant in a rooting medium that is suitable for the plant.

4. Watering: Water the plant regularly to maintain the moisture level of the rooting medium.

5. Monitor the growth: Keep an eye on the plant's growth. New roots should begin to form within a few weeks.

NOTES:
- Hormex Rooting Powder No. 16 is effective for a wide range of plants, including woody ornamentals and conifers.
- Always follow the label instructions and use the product as directed.
- Keep Hormex Rooting Powder No. 16 out of reach of children and pets.
