Atrazine 90 DF (Sipcam) – 25 lb. Bag – Mech
SCP-Dis..
Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use chemical-resistant gloves, such as barrier laminate or butyl rubber ≥ 14 mils.

Chemical-resistant gloves made out of any waterproof material must read and follow all precautionary statements.

Apply this product to the entire tile-outletted zone. If weeds develop, a shallow cultivation or rotary hoeing will generally result in better weed control.

For postemergence control of those weeds listed under resistent biotypes, we recommend the use of this product in combinations or in sequence with other registered herbicides.

General Use Directions for All Soil Types:

For preemergence control of giant foxtail, sicklepod, and velvetleaf (buttonweed) for grassy weeds, use one of the following:

- Metolachlor + Simazine (Sim-Trol®)
- Alachlor + Glyphosate
- Glyphosate
- Paraquat

For control of annual bluegrass and barnyardgrass, broadcast 2.2-4.4 lbs./A of product before harvest and before weeds emerge. Do not exceed 1.1 lbs./A of product (0.8 oz. per 1,000 sq. ft.) for control of the other weeds named above. Do not exceed 1.1 lbs./A of product (0.8 oz. per 1,000 sq. ft.) for control of the other weeds named above.

If weeds are present at time of treatment, apply in a tank mix combination with a contact herbicide (for example, paraquat). For broadcast, band, or interline as suggested with the final application being prior to close-in. Do not exceed the rate of 2.2-4.4 lbs./A of product before harvest and before weeds emerge.

For control of common lambsquarters, field pennycress, kochia, mustard, Russian thistle, wild lettuce, and suppression of infestation of insects, nematodes, and diseases, (4) On newly sprigged turfgrass, temporary slowing of growth may follow use for several days. If treated turfgrass is to be used for hay, hay should be cut within 10 days after treatment.

When applying Atrazine 90 DF, avoid dry conditions that can lead to poor seed germination. Do not apply when soil temperature is below 60°F or when moisture content of the soil is less than 10% of the soil's total water holding capacity. Do not apply Atrazine 90 DF if weeds are present at application, a tank mix with a product containing paraquat may be used. Broadcast 0.5-1.1 lbs. of product per acre. A cultivation may be necessary if pigweed and lambsquarters reach 6 inches in height and before all other weeds reach 4 inches in height. In CO, pigweed and lambsquarters reach 6 inches in height and before all other weeds reach 4 inches in height. In CO, pigweed and lambsquarters reach 6 inches in height and before all other weeds reach 4 inches in height. In CO, pigweed and lambsquarters reach 6 inches in height and before all other weeds reach 4 inches in height.
Atrazine 90 DF

HERBICIDE

For Season-Long Weed Control in Corn, Sorghum and Wheat-Sorghum-Fallow:

ACTIVE INGREDIENT:
Atrazine 90 DF is a three-component product containing 90% active ingredient, Atrazine DF, 5% technical grade emulsifier, and 5% technical grade dispersant. The active ingredient is a triazine herbicide that controls a wide range of broadleaf and grass weeds. Atrazine DF is formulated to provide easy handling and application in a variety of field conditions.

HOT WEATHER DOSAGES:

For best results, apply Atrazine DF when temperatures are cool and the soil is moist. Avoid applying Atrazine DF in hot weather conditions, as it may reduce the effectiveness of the product.

KEEP OUT OF REACH OF CHILDREN

CAUTION

See below for precautionary statements.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Read and follow all directions, precautions, and restrictions on the label.

DO NOT USE ON:

- Stone crops
- Wheatgrass
- Sand, loamy sand, sandy loam, or clay soil

STORAGE AND DISPOSAL:

- Store in a dry place.
- Do not mix with any other chemicals.
- Dispose of unused product in a safe manner.

USE PRECAUTIONS AND RESTRICTIONS FOR APPLICATIONS WITH EMULSIFIABLE OIL OR OIL BASED SPREADERS:

- Use only on loam, silt loam, silty clay loam, clay loam, and silty clay soils with at least 1% organic matter.
- Apply the recommended rate of ATRAZINE 90 DF shown in Table 3 up to 45 days prior to planting.
- Use only on turf grasses and ornamentals.
- Do not apply more than two weeks prior to planting.
- Refer to the section for information if weeds should develop following early treatment.

NOTE:

- Atrazine 90 DF is a good choice for controlling weeds in corn, sorghum, and wheat-sorghum-fallow systems.
- For best results, apply Atrazine 90 DF in late winter before the weeds emerge.

FOR ALL POSTEMERGENCE APPLICATION:

- Apply 0.4-0.6 lb/A of product in at least 40 gals. of water as a spray. Use screens to protect the pump and to prevent nozzles from clogging.
- Use only on loam, silt loam, silty clay loam, clay loam, and silty clay soils with at least 1% organic matter. Apply only once per year.
- Always apply Atrazine 90 DF following the recommended rate for the crop.

USE PRECAUTIONS AND RESTRICTION:

- Normal weed control programs may be used in the following: corn, grain sorghum, or forage sorghum crop.
- For postemergence control of cheatgrass (downy brome, purple brome, and hardhead), apply 0.06-0.12 lb/A of product plus 0.25 gals. of water per 1,000 sq. ft.
- Use only on turf grasses and ornamentals.
- Do not use north of NC (except may be used in recreational areas, and sports fields):
- Apply as a preemergence spray at the recommended rate for the crop.
- Apply as a preplant incorporated spray at the recommended rate for the crop.
- Apply as a preplant surface spray at the recommended rate for the crop.
- Do not apply more than two weeks prior to planting.

NOTE:

- Atrazine 90 DF in late winter before the weeds emerge. For all weeds, use 0.4 oz. of ATRAZINE 90 DF per 1,000 sq. ft.
- ATRAZINE 90 DF will control annual bluegrass even if other grasses have emerged.
- Do not use on golf greens.
- Do not use north of NC (except may be used in recreational areas, and sports fields):
