IMPORTANT: READ THIS LABEL:

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Disposing of equipment wash water or rinsate is hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when surface water is present or to intertidal areas below the mean high water mark. Runoff also may be

FIRST AID

HAYWIFELOWED

• Call a poison control center, doctor, or 1-877-854-2949 immediately for treatment advice.

If In Eyes

• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

NOTE TO VETERINARIAN

If swallowed or absorbed through the skin, this material may reduce the clotting ability of the blood and cause bleeding. If ingested, administer Vitamin K₁ intramuscularly or orally. Repeat as necessary based on monitoring of prothrombin times.

Pesticide Disposal:

Store only in original container in a cool, dry place inaccessible to children and pets. Keep containers closed and away from other chemicals.

PELLETED BAIT

Kills Warfarin Resistant Norway Rats

Norway rats, roof rats, and house mice may consume a lethal dose in one night’s feeding with first dead rodents appearing four to five days after feeding begins.

KILLS RATS, MICE, & MEADOW VOLES*

MICE AND MEADOW VOLES*: Place 1 Place Pac at 8 to 12 foot intervals in infested areas. Maintain 1 Place Pac per 75 to 100 square feet. Keep in corners and concealed places, between floors and walls, or in locations where rats, mice, or meadow voles* may be present.

When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations.

DIRECTIONS FOR USE

1. Store unused product out of reach of children and pets.

2. Apply bait in locations out of reach of children, pets, domestic animals and nontarget wildlife, or in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children under six years of age, and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be stolen from bait stations when they are lifted, units must be secured or otherwise immobilized. Stronger bait stations are needed in areas open to hosed livestock, raccoons, bears, or other potentially destructive animals, or in areas prone to vandalism.

3. Dispose of product container and unused, spoiled, or unconstructed bait as specified on this label.

Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used wherever children, pets, non-target mammals, or birds may have access to the bait placement location.

USE RESTRICTIONS: This product may only be used to control the following rodent pests in and around agricultural buildings and man-made agricultural structures: House mouse (Mus musculus), Norway rat (Rattus norvegicus), Roof rat (Rattus rattus), Cotton rat (Sigmodon hispidus), Eastern harvest mouse (Reithrodontomys hudsonicus), Golden mouse (Ochrotomys nuttalli), Polynesian rat (Rattus exulans), Meadow vole* (Microtus pennsylvanicus), White-throated woodrat* (Neotoma albicincta), Southern plains woodrat* (Neotoma micropus), and Mexican woodrat* (Neotoma mexicana). This product must be used in and within 100 feet of agricultural buildings and man-made agricultural structures constructed in a manner so as to be vulnerable to commensal rodent invasions and/or to harboring or attracting rodent infestations. Fence and perimeter baiting, beyond 100 feet from an agricultural structure as defined above, is prohibited. This product must not be applied directly to food or feed crops.

If sold in USDA inspected facilities, this product must be applied in tamper-resistant bait stations.

Do not sell this product in individual containers holding less than 8 pounds of bait.

SELECTION OF TREATMENT AREAS: Determine areas where rats, mice, or meadow voles* will most likely find and consume the bait. Generally, these areas are along walls, by grained openings, in corners and concealed places, between floors and walls, or in locations where rats, mice, or meadow voles* have been present. Keep bait from rain and snow. Remove as much alternative food as possible.

APPLICATION DIRECTIONS:

RATES: Apply 3 to 10 Place Pacs (at intervals of 15 to 30 feet) per placement in infested areas. Maintain an uninterrupted supply of fresh bait for at least 10 days.

MICE AND MEADOW VOLES*: Place 1 Place Pac at 8 to 12 foot intervals in infested areas. Maintain an uninterrupted supply of fresh bait for at least 15 days.

FOLLOW-UP: Replace contaminated or spoiled bait immediately. Wearing waterproof gloves, collect and dispose of all dead, exposed animals and leftover bait. To prevent reinfection, limit sources of rodent food, water, and harborage as much as possible. If reinfection does occur, repeat treatment. Where a continuous source of infestation is present, establish permanent bait stations and replenish as needed.

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.
**TREATMENT FOR PET POISONING**

If animal eats bait, call veterinarian at once.

**NOTE TO VETERINARIAN**

Anticoagulant Bromadiolone: For animals ingesting bait and/or showing poisoning signs (bleeding or elevated prothrombin times), give Vitamin K₁. If needed, check prothrombin times every 3 days until values return to normal (up to 30 days). In severe cases, blood transfusions may be needed.
