KILLS RATS & MICE

APPLICATION DIRECTIONS

1. Store unused product out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife, or in areas that are not accessible to them.
3. Do not apply directly to food or feed crops.
4. Do not apply directly to intertidal areas below the mean high water mark.
5. Do not apply to places where surface water is present or to areas that are likely to be contaminated by water.

MICE:

Apply 1/4 to 1/2 oz. (1 to 2 level tablespoons) of bait at 8 to 12 foot intervals in infested areas.

RATS:

Apply 4 to 16 oz. of bait (usually at intervals of 15 to 30 feet) per placement in infested areas.

Pesticide Storage:

Store only in original container in a cool, dry place inaccessible to children and pets. Keep container closed and away from other chemicals.

Pesticide Disposal:

Disposal of waste resulting from the use of this product in trash or at an approved waste disposal facility.

Container Handling:

For use on or near water, food or feed by storage or disposal.

WARNING:

To the extent that this product is compatible with applicable law, seller makes no warranty, expressed or implied, concerning the use of the product other than that indicated on this label. Buyer assumes all risk of use and handling of this material when such use and handling is contrary to label instructions.

NOTE TO PHYSICIAN

If ingested, administer Vitamin K1, intravenously or orally. Repeated as necessary based on monitoring of prothrombin time.

ENVIROMENTAL HAZARDS

This product is extremely toxic to mammals and birds and all wildlife. Dogs, cats and other pets may become poisoned if they eat or drink a lethal dose.

FOLLOW-UP:

Replace contaminated or spoiled bait immediately. Using waterproof gloves, collect and dispose of all bait, exposed animals and leftover bait. To prevent contamination, bird sources of rodenticide food, water, and harborage as much as possible. If neoplasms do occur in non-target wild animals, do not assume that rodenticide levels in the wild animal are above the LD50 for poisoning.
