PRECAUTIONARY STATEMENTS
HAZARD TO HUMANS AND DOMESTIC ANIMALS
DANGER
Corrosive. Causes irreversible eye damage. May be fatal if inhaled. Harmful if swallowed or absorbed through skin. Do not get in eyes, on skin or on clothing. Do not breathe dust, vapor or spray mist. Wear goggles, face shield or safety glasses. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash clothing before reuse.

ENVIRONMENTAL HAZARD - This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, aquaria, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARD - STRONG OXIDIZING AGENT. Contact with water slowly liberates irritating and hazardous chlorine containing gases. Decomposes at temperatures above 48°F with liberation of harmful gases. When spilled, will burn with the evolution of chlorine and equally toxic gases.

NEVER add water to product. Always add product to large quantities of water. Use clean, dry utensils. DO NOT add the product to any dispensing device containing remainder of any other product. Such use may cause a violent reaction leading to fire or explosion. Contamination with moisture, organic material, or other chemicals may start a chemical reaction with generation of heat, liberation of hazardous gases, and possible fire and explosion.

IN CASE OF FIRE OR SMOKE: Call the fire department. Do not attempt to extinguish the fire without a self-contained breathing apparatus (SCBA). Do not let the fire burn. Flood with copious amounts of water. DO NOT use ABC or other dry chemical extinguishing agents since there is the potential for a violent reaction.

IN CASE OF CONTAMINATION OR DECOMPOSITION: DO NOT reuse container. Follow disposal instructions on label.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.

STORAGE: Keep material dry and in a dry area. Store in original containers where temperatures do not exceed 125°F (52°C) for 24 hours. Keep container tightly closed.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or residue is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Thoroughly wash and drain containers into the trash or waste compactor. Do not contaminate materials could cause a reaction and fire. DO NOT transport wet or damp materials. Neutralize material in a non-solvent site for safe disposal.

FOR RECIRCULATING WATER SYSTEMS

This product may be added to the system by direct placement into the water at a point where the product will be uniformly mixed with water. The frequency of feeding and dosing of the treatment will depend on the severity of the contamination. Such treated systems must be cleaned before treatment begins.

Intermittent or skip method
INITIAL DOSE: When the system is noticeably fouled, add this product at the rate of 0.15 to 0.75 pounds per 1000 gallons (16 to 80 grams per 1000 liters) in the system to achieve 0.5-10 mg/L, total available chlorine, as measured by a suitable test kit. Repeat dosage until residual is achieved.

SUBSEQUENT DOSE: When microbial control is evident, add this product at the rate of 0.03 to 0.15 pounds per 1000 gallons (0.3 to 1.5 grams per 1000 liters) in the system to achieve 0.5-1 mg/L, total available chlorine, as measured by a suitable test kit. Repeat periodically as needed to maintain control.

Continuous feed method
INITIAL DOSE: When the system is noticeably fouled, add this product at the rate of 0.15 to 0.75 pounds per 1000 gallons (16 to 80 grams per 1000 liters) in the system to achieve 0.5-10 mg/L, total available chlorine, as measured by a suitable test kit. Repeat dosage until residual is achieved.

SUBSEQUENT DOSE: When microbial control is evident, add this product at the rate of 0.03 to 0.15 pounds per 1000 gallons (0.3 to 1.5 grams per 1000 liters) in the system to maintain 0.5-1 mg/L total available chlorine, as measured by a suitable test kit.
