Spray Drift Management
A variety of factors including weather conditions (e.g., wind directions, wind speed, temperature, relative humidity) and method of application can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Droplet Size
When applying sprays that contain 2,4-D as the sole active ingredient, or when applying sprays that contain 2,4-D mixed with active ingredients that require a coarse to medium spray, apply only as a coarse or coarser spray (ASAE standard 572) in a volume mean diameter of 355 microns or greater for spraying atomizer nozzles. When applying sprays that contain 2,4-D mixed with other active ingredients that require a medium or fine spray, apply only as a medium or coarser spray (ASAE standard 572) in a volume mean diameter of 350 microns or greater for spraying atomizer nozzles.

Wind
Do not apply at wind speeds greater than 15 mph. Only apply this product if the wind direction favors on-target deposition and there are no sensitive areas (including, but not limited to, residential areas, bodies of water, known habitat for non-target species, non-target crops) within 250 feet downwind. If applying a medium spray, leave one swath unsprayed at the downwind edge of the treated field.

Temperature Inversions
If applying at wind speeds less than 3 mph, the applicator must determine if it is conditions of temperature inversion exist, or if stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

Susceptible Plants
Do not apply under circumstances where spray drift may occur to food, forage, or other plantings that might be damaged or crops thereof rendered unfit for sale, use or consumption. Susceptible crops include, but are not limited to, cotton, onion, tobacco, tomatoes, beans, and other vegetables, or tobacco. Small amounts of spray drift that might not be visible may irreversibly damage broadleaf plants.

Other State and Local Requirements
Applications must follow all federal, state and local pesticide drift requirements regardless of application of 2,4-D herbicide. Where states have more stringent regulations they must be observed.

Equipment
All ground application equipment must be properly maintained and calibrated using appropriate monitors or sprayers.

For ground pumps: check for leaks or十字形 Markers.
Do not apply with a nozzle height greater than 4 feet above the crop canopy. 2,4-D-resistant crops may be present or conditioned during conditions of low humidity and high temperatures. Do not apply during conditions of low humidity and high temperatures.

Application Restrictions
Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

Not to be used in any recreational areas or in or around homes. Postemergence (annual & perennial weeds): Limited to two applications per year. Maximum of 40 gallons per acre per application to non-cropland areas. Application to non-cropland areas are not applicable, to treatment of commercial timber or other plantings being grown for sale or other purposes, for commercial wood production, or for research purposes.

Entry Restrictions: Do not enter or allow people (or pets) to enter the treated areas until sprays have dried.

Prohibited for aerial applications.

STORAGE AND DISPOSAL
Do Not Contaminate Water, Food, or Feed By Dumping Storage or Discarding.

Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinse water is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal: Nonrefillable container. Do not reuse or refill container. Offer for recycling, if available. Clean container promptly after emptying. Store these as follows: Empty the remaining contents into application equipment or a mix tank. Fill container 1/4 full with water. Replace and tighten closures. Tie container on its side and roll 1/2 back and forth, wriggling at least one complete revolution, for 30 seconds. Stand the container on its end and turn back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank or store rinse for later use or disposal. Repeat this procedure more times.
