Turf and Ornamentals Fungicide
85% Water Dispersable Granule

ACTIVE INGREDIENTS:
Thiophanate-methyl (dimethyl [1,2-phenylene]-bis
(iminocarbonothioyl)] bis [carbamate])* 85%
INERT INGREDIENTS: 15%
TOTAL 100%

*Also known as dimethyl 4,4-o-phenylenebis [3-thioallophanate]

KEEP OUT OF REACH OF CHILDREN
CAUTION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

FIRST AID
If on skin or clothing - Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 – 20 minutes. Call poison control center or doctor for treatment advice.
If in eyes - Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present after the first 5 minutes, then continue rinsing. Call poison control center or doctor for treatment.
If inhaled - Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth to mouth, if possible. Call a poison control center or doctor for further advice.

HOT LINE NUMBER
Have the container or label with you when calling poison control center or doctor, or going for treatment. You may also contact 1-800-621-5208 for emergency medical treatment information.

EPA REG. NO. 48234-13
EPA EST. NO. 48234-GA-1
FIRST AID
If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15–20 minutes.
- Call poison control center or doctor for treatment advice.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
CAUSES MODERATE EYE IRRITATION. CAUSES SKIN IRRITATION. HARMFUL IF INHALED OR ABSORBED THROUGH SKIN. AVOID CONTACT WITH SKIN, EYES, OR CLOTHING. WASH THOROUGHLY WITH SOAP AND WATER AFTER HANDLING. AVOID BREATHING SPRAY MIST. REMOVE CONTAMINATED CLOTHING AND WASH CLOTHING BEFORE REUSE.

PERSONAL PROTECTIVE EQUIPMENT
Applicators and other handlers must wear:
- long-sleeved shirt and pants
- Chemical-resistant gloves made of any waterproof material
- shoes plus socks
Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS:
Users should wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
Users should remove clothing immediately if pesticide gets inside.
Then wash thoroughly and put on clean clothing.
Users should remove PPE immediately after handling this product.
Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash water.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. DO NOT apply this product in a way that will contact workers or other persons either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow worker entry into treated areas during the restricted entry level (RE) of 12 hours.

Agricultural Use Requirements (continued...)
PPE required for early entry to treated areas that is permitted under Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil, water, is:
- Coveralls
- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. DO NOT enter treated areas without protective clothing until spray has dried.

GENERAL INFORMATION
Apply SySTec 1998 WDG with ground equipment, using sufficient volume of spray to provide thorough coverage. Add required amount of SySTec 1998 WDG to partially filled tank agitated by mechanical or hydraulic means and then add remaining required amount of water. Continuous agitation is required to keep the material in suspension. Do not tank mix with copper-containing materials or with highly alkaline pesticides, such as Bordeaux mixture or lime sulf. No claim of compatibility with other pesticides is implied. Use the higher rates under conditions of severe disease pressure. Also, see local State Extension Service recommendations for application schedules. Chemigation instructions follow Directions for Use. Do not apply through any irrigation system unless these instructions are followed. Do not use on turf being grown for sale as sod. Not for homeowner use. For use by individuals / firms licensed or registered by the state to apply ornamental or turf pest control products.

IMPORTANT: If, after using SySTec 1998 WDG as recommended, treatment is not effective, a tolerant strain of fungi may be present (consult your local State extension service agent). Consult your State Agricultural Experiment Station or your State Agricultural Extension Service for advice on the prompt use of some other suitable fungicide.

TURF
For use on all fine turf applications such as industrial lawns, athletic fields, residential and public areas (home lawns, parks, athletic fields, schools and day care centers Professional application only), cemeteries, golf course greens, tees, and fairways of Bent grasses, Blue Grasses, Bermudagrasses, Fescues, Ryegrasses, St. Augustine grasses or their mixtures. SySTec 1998 WDG is not phytotoxic to any of the above mentioned grasses when used in accordance with the label. SySTec 1998 WDG is to be used for the prevention and control of the below mentioned diseases (provides both curative and protective action). Apply recommended amounts in sufficient water to obtain thorough coverage, usually three to five gallons per 1,000 square feet of turf area. When treating golf greens, always treat aprons and approaches. Use the highest recommended rate under conditions of severe disease pressure. Do not apply with fixed-wing rotary aircraft.

FUSARIUM BLIGHT (Fusarium roseum), SUMMER PATCH (Magnaporthe poae), NECROTIC RING SPOT (Lepiospora korotae)- Apply SySTec 1998 WDG at 3.53 ounces per 1,000 square feet. Water into the root zone by irrigating with one inch of water immediately after application. Make two applications at 14 day intervals, beginning applications when the disease first appears.

GRAY LEAF SPOT (Puccinia grisea)-Apply SySTec 1998 WDG at 2.35 to 3.53 oz./100 sq. ft. beginning when conditions are favorable for disease development. Continue at 14 day intervals. Spray should dry on leaves with no “watering in.”

DOLLAR SPOT (Sclerotinia homoeocarpa), ANTHRACONOSE BASAL AND FOLIAR (Colletotrichum graminicola) – Apply SySTec 1998 WDG at 2.3 to 3.53 oz./1000 sq. ft. when disease first appears repeat application at 14 days. Rotations and/or tank mix combinations with ChloroStar or ConSyst WDG.

RUST (Puccinia, Uromyces) – Apply SySTec 1998 WDG at 2.3 to 3.53 oz./1000 sq. ft. when disease first appears repeat application at 14 days. Rotations and/or tank mix combinations with ChloroStar or ConSyst WDG.

LARGE BROWN PATCH (Rhizoctonia solani), ZOYSIA PATCH (Rhizoctonia solani), COPPER SPOT (Gloeocercospore sorghi), ASCOCHYTA LEAF SPOT, RED THREAD (Corticium fuciforme), FUSARIUM PATCH (Fusarium nivale)- Apply SySTec 1998 WDG at 2.3 to 1/3 ounces per 1,000 square
feet, beginning when the disease first appears and continue at 10 to 14 day intervals through the season or as needed. Spray should dry on leaf surfaces with no "wetting out".

**STRIPE SMUT** (Ustilago striiformis) - Apply SyTec 1998 WDG at 3 to 3.53 ounces per 1,000 square feet. Water into the root zone by irrigating with one inch of water immediately after application. Make two applications at 14 to 21 day intervals. Begin applications when the disease first appears, either in the spring or fall.

Observe the maximum individual application rates and maximum seasonal application limits in the SyTec WDG Maximum Application Rates table.

**ORNAMENTALS (FIELD AND GREENHOUSE)**

SyTec 1998 WDG is a broad-spectrum systemic fungicide, which controls a variety of diseases on woody and herbaceous ornamental crops. SyTec 1998 WDG is also effective as a preplant dip on cining and bulbs. SyTec 1998 WDG may be used to control the listed diseases on noncommercial bearing, and non-bearing fruit trees, almond, apple, apricot, cherry, peach, pecan, plum, and prune trees. Do not apply to home orchards / fruit trees after fruit set, if fruit is intended for consumption.

**KEY TO NOTES:**

1. Begin at bud and make 2 or 3 additional applications at 10 to 14 day intervals.
2. Begin treatment as flowers open. Addition of a surfactant to the spray mixture improves distribution of the spray on hard-to-wet plants such as roses.

**I. FOLIAR SPRAY-HYDRAULIC APPLICATION**

**Mixing instructions:** Add required amount of SyTec 1998 WDG to partially filled tank agitated by mechanical or hydraulic means and then add remaining required amount of water. Maintain continuous agitation to keep the material in suspension and apply with properly calibrated spray equipment. Apply until leaves glisten, but not to point of runoff.

**Application Rates and Timing for Diseases:** Begin applications when disease first appears and repeat at 10 to 14 day intervals, during the growing season. Shorten the interval during humid, rainy weather.

**Ground Application:** Use 0.5 to 0.8 pounds of SyTec 1998 WDG per 100 gallons of water. For control of Powdery Mildew and Botrytis (Gray Mold), use 0.4 pounds of SyTec 1998 WDG per 100 gallons of water.

| **Foliar Spray for bearing and nonbearing fruit trees** |
|----------------|----------------|
| **Plant Type** | **Disease** | **Rate Lbs/Acre** | **Remarks** |
| Almonds | Brown Rot Blight Scab | 80 – 1.24 | Apply at bud and petal fall. |
| Apples | Apple Scab Flyspeck Powdery Mildew Sooty Blotch Black Rot Brooks Fruit Rot | 0.2 – 0.4 | Apply at 5 – 10 day intervals from green tip through petal fall. Repeat 7 – 14 day intervals or as needed. |
| Pecans | Scab Brown Spot Downy Powdery Mildew Liver Spot Stem End Blight Zonale Leaf Spot | 40 – 80 | Begin applications when first leaves are showing and repeat at 3 – 4 week intervals until shuck split. Do not apply after shuck split. |
| Stone Fruit | Apricots Cherries Nectarines Peaches Plums Prunes | 1.24 | Apply at early bloom. Make a second application at full bloom. In addition for Fruit Brown Rot, apply 1 to 2 sprays starting 3 weeks before harvest. If needed under severe disease pressure, apply additional sprays at 10-14 day intervals between pre-harvest sprays. Do not apply within 1 day of harvest. |
| Chickies | Powdery Mildew | 1.24 | Apply at early bloom. Make a second application at full bloom. Plus Apply at shuck fall and first cover. Do not apply within 1 day of harvest. |
| Peaches | Brown Rot Blight Peach Scab | 1.24 – 1.85 | Apply at early bloom. Make a second application at full bloom if conditions favor disease development. Plus Apply at shuck split at first cover sprays. Do not apply within 1 day of harvest. |
| Plums and Prunes | Brown Rot Blight Leaf Spot | 1.24 | Apply at petal, full shuck, and at first, second, and third cover sprays at 10-14 day intervals and 1 spray 14 to 21 days after harvest. Do not apply within 1 day of harvest. |

**NOTE:** SyTec 1998 WDG does not control Phytophthora spp. or Phytophthora spp.

**Mixing instructions:** Add required amount of SyTec 1998 WDG to partially filled tank agitated by mechanical or hydraulic means and then add remaining required amount of water. Maintain continuous agitation to keep the material in suspension.
Application Rates and Timing for Disease Control: Use 0.8 pounds of SyStec 1998 WDG per 100 gallons of water. Apply as a drench or heavy spray to 800 sq. ft. of bench area (1 to 2 pints per square foot) after transplanting into propagation beds or containers. Repeat at 2 to 4 week intervals during periods favorable for disease.

III. PREPLANT DIP TREATMENT
14 PLANT TYPES AND DISEASES CONTROLLED

DISEASE(S) PLANT TYPES
Bacotryis plants or cuttings of woody and herbaceous ornamentals
Freiarina plants or cuttings of woody and herbaceous ornamentals
Sclerotinia stem, plants or cuttings of woody and herbaceous ornamentals
crown & roots
Cynidrocladium woody ornamentals (such as azaleas, roth rhododendrons, conifers, poinsettias)
Thielaviopsis and woody ornamentals (such as azaleas, rhododendrons, confiers, poinsettias)
Fuariaria and bulbs (Easter, Lily, Tulip, Gladiolus, Daffodil, Iris)
Penicillium and rots
Ramularia perennial and annual bedding plants

Application Rates and Timing for Disease Control:
Plants or Cuttings – Use 0.8 pounds of SyStec 1998 WDG per 100 gallons of water, immerse plants or cuttings for 10 to 15 minutes; remove and allow to drain. Bulbs for storage or pre-plant – Use 1.4 pounds of SyStec 1998 WDG per 100 gallons of water. Soak cleaned bulbs for 15 to 30 minutes in warm water (80° to 85°F) preferably within 48 hours after digging. Dry bulbs after treatment. If bulbs are for forcing, treat bulbs that have been heatered.
NOTICE TO USER: Plant tolerance to SyStec WDG has been found to be acceptable on all ornamentals that it has been tested on. Due to the large number of species and varieties of ornamental and nursery plants, it is impossible to test every one for tolerance to SyStec WDG. Neither the manufacturer nor the seller has determined whether or not SyStec WDG can be used safely on ornamental plants not specified on this label. The professional user should determine if SyStec WDG can be used safely prior to commercial use. In a small area test the recommended rates on a small number of plants for phytotoxicity prior to widespread use. Before using SyStec WDG in tank mixture with other products, test the mixture on a small number of plants for phytotoxicity prior to widespread use.

CHEMIGATION
GENERAL INSTRUCTIONS
Apply this product only through sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, trailer, big gun, solid set, or hand move. Do not apply this product through any other type of irrigation system. Crop injury from phytotoxicity, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water. If you have any questions about calibrations, you should contact State Extension Service specialists, equipment manufacturers or other experts. A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person shall then the system down and make necessary adjustments should the need arise.
Do not connect chemigation system to any public water system. Public water system means a system for the provision of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

SYSTEM REQUIREMENTS
The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow. The pesticide injection pipeline must contain a functional, automatic, quick-closing valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
Systems must use a metering pump, such as positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment.

INSTRUCTION FOR SPRINKLER (OVERHEAD) IRRIGATION:
Observe the requirements in the System Requirements section above. Do not apply when wind speed favors drift beyond the area intended for treatment.
Maintain a gentle continuous agitation in mix tank during mixing and application to assure a uniform suspension.
Greater accuracy in calibration and distribution will be achieved by injecting a larger volume of a more dilute suspension per unit time. Application of more than recommended quantities of irrigation water per acre may result in decreased product performance. Do not apply when wind speed favors drift, when system connections or fittings leak, when nozzles do not provide uniform distribution or when lines containing the product cannot be flushed and must be disassembled and drained. In a center pivot system, block the nozzle set nearest the well/pivot/injection unit to prevent spray being applied to this area. When sprinkler distribution patterns do not overlap sufficiently unacceptable disease control may result. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. SysTec 1998 WDG may be applied in conjunction with chemically neutral liquid fertilizers. Application in conjunction with highly alkaline fertilizers, such as aqueous ammonia, may cause a degradation of the pesticide, resulting in reduced performance and should be avoided. Check local restrictions and requirements regarding sprinkler irrigation applications, as they may vary from state to state.

SPRAY PREPARATION
Remove scale, pesticide residues, and other foreign matter from the chemical tank and entire injection system. Flush with clean water.
Prepare a suspension of SyStec 1998 WDG in a mix tank. Fill the tank with 1/2 to 3/4 the desired amount of water. Start mechanical or hydraulic agitation. Slowly add the required amount of SysTec 1998 WDG and then the remaining volume of water.
APPLICATION INSTRUCTIONS
Set sprinkler system to deliver 0.1 to 1.25 inches of water per acre.
Volumes of water higher than this may reduce efficacy. Start sprinkler and then uniformly inject the suspension of SyStec 1998 WDG into the irrigation water line so as to deliver the desired rate per acre. The suspension of SysTec 1998 WDG should be injected with a positive displacement pump into the main line ahead of a right angle turn to insure adequate mixing.
NOTE: When treatment with SysTec 1998 WDG has been completed, do not irrigate the treated area for 24 to 48 hours to prevent washing the chemical off the crop.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.
PESTICIDE STORAGE: Store in original container in a dry area. Do not store in a manner where cross-contamination with other pesticides, fertilizers, food or feed could occur. If spilled during storage or handling sweep up spillage and dispose of in accordance with Pesticide Disposal Instructions listed below.
PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal Law. If wastes cannot be disposed of according to label instructions, contact your State or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.
CONTAINER DISPOSAL: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill or by incineration, or if allowed by State sand local authorities, by burning. If burned, stay out of smoke.

WARRANTY AND LIMITATION OF DAMAGES
REGAL CHEMICAL COMPANY
Alpharetta, Georgia 30004
Regal Chemical Company warrants that this product conforms to the chemical descriptions on its label. When used in accordance with label directions under normal conditions, this product is reasonably fit for its intended purpose. Since timing, method of application, weather, plant and soil conditions, mixtures with other chemicals, and other factors affecting the use of this product are beyond our control no warranty is given concerning the use of this product contrary to label directions or under conditions which are abnormal or not reasonably foreseeable. The user assumes all risks of any such use.
