3336®
TURF AND ORNAMENTAL SYSTEMIC FUNGICIDE
For the prevention and control of turf diseases and the diseases of annual and perennial flowers, bedding plants, foliage plants, ground covers, plus deciduous and evergreen trees and shrubs.

ACTIVE INGREDIENT:
Thiophanate-methyl (dimethyl 4,4'-o-phenylenebis[3-thioalophanate]) 41.25%
OTHER INGREDIENTS 58.75%
TOTAL 100.00%
This product contains 4.0 lb thiophanate-methyl per gallon.

KEEP OUT OF REACH OF CHILDREN

CAUTION

FIRST AID

• IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

• IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for further treatment advice.

• IF IN EYES: Hold eyes open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for further treatment advice.

• IF SWALLOWED: Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.

• Have the product container or label with you when calling a poison control center or doctor, or when going for treatment. For 24-Hour Emergency Assistance Call Chemtrec 1-800-424-9300.

PRECAUTIONARY STATEMENTS

• HAZARDS TO HUMANS AND DOMESTIC ANIMALS
  CAUTION: Harmful if swallowed, absorbed through the skin or inhaled. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling.

• PERSONAL PROTECTIVE EQUIPMENT (PPE)
  Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category C on an EPA chemical resistance selection chart.
  • WPS Uses: Applicators and other handlers who handle this pesticide for any use covered by the Worker Protection Standard, 40 CFR Part 170, must wear: long-sleeved shirt and long pants, chemical resistant gloves (such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton ≥ 14 mils) and shoes with socks.
  • FOR exposures in encloosed areas: a respirator with either an organic vapor-removing cartridge with a NIOSH approved organic vapor (OV) cartridge or canister with any N, R, P, or HE filters.
  • NON-WPS Uses: Applicators and other handlers who handle this pesticide for any use NOT covered by the Worker Protection Standard, 40 CFR Part 170, should wear: long-sleeved shirt and long pants, and shoes with socks.
  Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS: Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Remove PPE immediately after handling this product. Wash outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

• ENVIRONMENTAL HAZARDS
  This pesticide is toxic to fish. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water by disposal of equipment washwaters. Do not apply, allow to drift, or drain to groundwater onto non-target areas.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling, and with the Worker Protection Standard, 40 CFR part 170. This standard requires, among other things, the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. Exemption: If the product is applied by drenching, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water: inclocard, chemical resistant gloves, (such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton ≥ 14 mils), and shoes with socks.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box only apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Turf and Landscape Uses: Keep children and pets out of treated areas until sprays have dried.

DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING. Do not apply this product in a way that will contact workers or others persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage: Store in the original container in a cool, temperature controlled area. Do not store in a manner where cross-contamination with other pesticides, fertilizers, food or feed could occur. If spilled during storage or handling, contain/capture spillage and dispose of in accordance with the Pesticide Disposal instructions below.

Pesticide Disposal: Wastes resulting from the use of this product are toxic and may be disposed of on site or at an approved waste disposal facility.

Remove residue from empty container. Triple rinse (or equivalent), then pour for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. Burned, stovetop smoke.

GENERAL INFORMATION

3336®. F. is a broad spectrum fungicide exhibiting preventative, curative, and systemic properties. It is useful on a wide variety of turf and ornamental disease problems. Apply 3336 F with ground or overhead equipment, using sufficient volumes of spray to provide thorough coverage. Do not apply with boom wings or rotary aircraft. Use the higher rates under conditions of severe disease pressure. Also, see local State Extension Service recommendations for application schedules. This product is not for homeowner use and can only be used by individuals/layers licensed or registered by the state to apply ornamental or turf pest control products. Chemigation instructions follow “Directions For Use.” Read and follow these instructions carefully for this method of application.

Resistance Management: To avoid the development of tolerant strains of fungi, 3336 F should be used with fungicides of different modes of action. Cleary Chemical does not recommend the use of products containing thiadiazoxide in combination or rotation with 3336 F. These utilize similar chemistry and mode of action and can contribute to development of disease tolerance. If, after using 3336 F as recommended, and the treatment is not effective, a tolerant strain of fungi may be present. Consult your local Cleary Chemical representative, your State Agricultural Experiment Station, or your State Cooperative Extension Service for proper disease identification and advice on the prompt use of some other suitable fungicide or disease control strategy. As long as recommended precautions are followed, 3336 F can remain useful for disease control.

Mixing Instructions: SHAKER WELL BEFORE USING. Some mixing may occur during prolonged periods of non-use. High pH environments cause a shortened tank life for diluted product. The buffering of tank water to pH 7.0 prior to the addition of 3336 F is recommended. Add required amount of 3336 F to partially filled tank (1/2 total volume), agitate by mechanical or hydraulic means, add tank mix product if used (Do not tank mix 3336 F with copper-containing materials or with highly alkaline pesticides, such as Bordeaux mixture or lime sulfur. For more information, see Tank Mixing Instructions below), agitate again and then add remaining required amount of water. Continuous agitation is recommended to keep the material in proper suspension. For best results, use spray mixture the same day it is prepared.
Tank Misting Instructions: 3336 F is compatible with most commonly used pesticides. If tank misting with other materials, add products in the following order: water soluble bags, wettable powders, dry flowables, liquid flowables, emulsifiable concentrates, and soluble materials such as fertilizers. No claim of compatibility with other products is implied. Do not tank mix with copper-containing materials or with high alkali value pesticides, such as Bordeaux mixture or lime sulfur. Consult the intended tank mix partner product label for appropriate application rates and use instructions. Follow the label directions for the most restrictive of label precautions and limitations. This product cannot be mixed with any product containing a label prohibition against such mixing. Read and observe the most restrictive precautionary statements and other information appearing on product labels used in mixtures. 3336 F may be applied in conjunction with chemical neutral liquid fertilizers. Application in conjunction with highly alkaline fertilizers, such as aqueous ammonia, may cause a degradation of the pesticide, resulting in reduced performance and should be avoided.

CHEMIGATION

GENERIC REQUIREMENTS
1. Apply this product only through the following types of systems: sprinkler including center pivot, lateral move, end tow, aids (wheel), roller, knapsack, or hand move; flood (basin); or drip trickle irrigation systems. Do not apply this product through any other type of irrigation system.
2. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
3. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts.
4. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
5. A person knowledgeable of the chemigation system and responsible for its operation, under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

SPECIFIC REQUIREMENTS
1. Public water systems means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 69 days out of the year.
2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank at least twice the inside diameter of the fill pipe.
3. The system must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back towards the injection pump.
4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being drawn from the supply tank when the irrigation system is either automatically or manually shut down.
5. The system must contain automatic interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stalls, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

TURF APPLICATIONS
1. Remove scale, pesticide residue, and other foreign matter from the chemical tank and entire injection system. Flush with clean water.
2. Prepare a suspension of product in the mix tank or stock bucket. Fill the tank with 1/2 or 3/4 of the desired amount of water. Stir agitation and add fine required amount of product to the solution along with the remaining volume of water.
3. Maintain a gentle agitation in the mix tank during application to assure a uniform suspension. Follow mixing instructions and tank mixing instructions previously indicated.
4. Start system and then uniformly inject the suspension of 3336 F into the irrigation line as to deliver the desired rate per acre. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation system.
5. Greater accuracy in calibration and distribution will be achieved by injecting a larger volume of a more dilute suspension per unit time.
6. The suspension of 3336 F should be injected with a positive displacement pump into the main line ahead of a right angle turn to ensure adequate mixing.
Table 1: Maximum Individual Application Rates and Minimum Re-Treatment Intervals
Do not exceed the amounts per acre or reduce the re-treatment interval indicated below.

*Remarks: For prevention in historic areas of disease pressure, apply twice at 14 day intervals when soil temperature reaches 60°F. For curative control, apply when disease first appears and continue at 14 day intervals. Rotations and/or tank mix combinations with chlorothalonil or triadimefon can be utilized.

Bermudagrass Decline
Apply in mid-July or when disease symptoms first appear and repeat at 14 day intervals for suppression. Use higher rates under most severe disease expression. Water treatment into active root zone. Follow proper agronomic recommendations to maintain plant vigor.

Cool Season Brown Patch
For prevention, apply in fall before turf has stopped all growth activity. Apply second application in early spring when soil temperatures reach 55-60°F or when disease first appears. For curative action, apply when disease first appears in early spring and continue at 14 day intervals. Water treatment into active root zone.

Copper Snow Mold
Apply 2 treatments at 21 day intervals in late fall to early winter, with the last application made just prior to first permanent snow cover. Rotations and/or tank mix combinations with PCNB can be utilized.

### HORTICULTURAL APPLICATIONS

**NURSERY, GREENHOUSE, LANDSCAPE & INTERIORSCAPE**

Annual and Perennial Flowers, Bedding Plants, Foliage Plants, Ground Covers, plus Deciduous and Evergreen Trees and Shrubs

Do not apply to horse orchard/turf trees after fruit set.

3336 F is a broad spectrum systemic fungicide which controls a variety of foliar, stem, and root diseases on a wide range of commercially important plants. 3336 F is also effective as a pre-plant dip on cuttings and tubers. For chilli/pepper applications, best crop protection is achieved with preventative treatments repeated every 21-28 days. For foliar applications, begin treatments when disease first appears, or during suspected periods of disease incidence. Apply additional applications every 7-14 days or as otherwise instructed for the prevention or control of the listed diseases. Use of a wetting agent is recommended for plants that have leaves that are difficult to wet properly. Use of a spreader-sticker is recommended to enhance product performance in wet weather conditions or during periods of overhead irrigation. 3336 F may be applied as a ground application using hand held, mechanical or motorized spray equipment, or as a chemigation spray or through an applicable sprinkler irrigation system, or as an overhead application where applicable. See specific instructions below. For foliar applications, do not exceed thirty-six (36) pounds active ingredient per acre per crop season from all thiophanate-methyl containing products. For soil-drench applications, do not exceed 30 pounds active ingredient per acre per crop season from all thiophanate-methyl containing products.

Note: The Directions For Use of this product reflect the cumulative inputs from both historical field use and product testing programs. However, it is impossible to test this product on all species and cultivars. A preliminary trial is suggested on a small scale before a full treatment is applied to any plant type not shown on this label but found in a similar use site with a listed disease problem. Wait 7-14 days after treatment to evaluate results. This product is not recommended for use on Swedish Ivy (Nephrolepis exaltata), Boston Fern (Nephrolepis exaltata), and Easter Cactus (Hatoco gפשר). Application Instructions: Apply material with properly calibrated hand held, mechanical or motorized spray equipment or by chemigation through appropriate sprinkler irrigation, flood, or drip systems. Begin applications when disease first appears and repeat at every 7-14 day intervals or as needed during the growing season. Use the shortest interval when conditions are unusually favorable for the development of disease. For hand held, mechanical, or motorized applications, mix 8.24 fl oz of 3336 F per 100 gal water (0.5-1.5 teaspoons per gallon) and apply as a full coverage spray to drip for the prevention and control of the diseases listed below.
Spray volume may range up to 400 gallons of finished spray per acre depending upon plant species and plant growth stage. For applications through irrigation systems, refer to use rates indicated in the foliar application chart. For small volume applications less than 100 gallons, divide recommended rate by 16 to get the number of teaspoons of 3336 F per gal.

**SPECIAL INSTRUCTIONS FOR PROPORTIONAL INJECTORS**
(e.g. Dosatron, Dosmatic, Anderson, and similar equipment)
Determine the treatment rate for crop and pathogen from the foliar application table below. Determine the injection ratio for the individual system to be used for application. For systems using a 1:16 ratio, measure and add the exact amount of recommended material per 100 gallons to each gallon of water in a stock bucket or tank. For systems using a 1:20 ratio, multiply the recommended amount per 100 gallons by 2. For systems using a 1:30 ratio, divide the recommended amount per 100 gallons added by 2. For systems using a 1:16 ratio, divide the recommended amount per 100 gallons by 6. Greater accuracy in calibration and distribution will be achieved by injecting a larger volume of a more dilute suspension per unit time. An injection ratio of 1:100 is recommended for most greenhouse and nursery systems.

CLEARY CHEMICAL CORPORATION makes no other expressed or implied warranty of fitness or merchantability or any other expressed or implied warranty. In no case shall CLEARY CHEMICAL or seller be liable for consequential, special or indirect damages resulting from the use or handling of this product including, but not limited to, loss of profits, business reputation, or customers, labor costs, or other expenses incurred in planting or harvesting. CLEARY CHEMICAL and seller offer this product and the buyer and user accept it subject to the foregoing conditions of sale and warranty which may be varied only by agreement in writing signed by a duly authorized representative of CLEARY CHEMICAL CORPORATION.

### CLEARY MATERIAL SAFETY DATA SHEET

**338F**

Please read the entire document. This Material Safety Data Sheet contains important environmental/health and toxicity information for your employees, and anyone else who will store, transport, display or handle this product. Please make sure this information is given to them. It also contains information to help meet community right-to-know/emergency response reporting requirements under SARA Title III and many other laws. If you sell this product, this MSDS must be given to the buyer or the information contained therein must be incorporated into the product.

#### SECTION 1: PRODUCT AND COMPANY IDENTIFICATION

<table>
<thead>
<tr>
<th>PRODUCT NAME:</th>
<th>338F</th>
</tr>
</thead>
<tbody>
<tr>
<td>EPA REGISTRATION NUMBERS:</td>
<td>100396</td>
</tr>
<tr>
<td>CHEMICAL NAME:</td>
<td>Dimethyl 4,4'-oxydiphenylmethane</td>
</tr>
<tr>
<td>SYNONYM:</td>
<td>Thiophane methyl</td>
</tr>
<tr>
<td>GENERAL USE:</td>
<td>Turf and ornamental fungicide</td>
</tr>
</tbody>
</table>

#### SECTION 2: INFORMATION ON INGREDIENTS

#### SECTION 3: HEALTH HAZARD INFORMATION

<table>
<thead>
<tr>
<th>Inhalation</th>
<th>N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eye Contact</td>
<td>May cause transient irritation.</td>
</tr>
<tr>
<td>Ingestion</td>
<td>May cause irritation.</td>
</tr>
<tr>
<td>Skin Contact</td>
<td>Non-irritating, not a known sensitiser. Chronic Effects of Overexposure: Irritation of eyes, nose and throat, dermatitis, headache and nausea.</td>
</tr>
</tbody>
</table>

#### SECTION 4: FIRST AID MEASURES

**IF INHALED**: Move person to fresh air. If person is not breathing, call 911 or an ambulance. If not, give artificial respiration, preferably mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

**IF ON SKIN OR CLOTHING**: Take off contaminated clothing and wash immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for further treatment advice.

**IF IN EYES**: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for further treatment advice.

**IF SWALLOWED**: Call a poison control center or doctor immediately for further treatment advice. Have person take a glass of water to drink. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person. Have the product container or label with you when calling a poison control center or doctor or when giving for treatment.

**For 24-Hour Emergency Assistance Call Chemtrec: 1-800-424-9300.**

Effective Date: 10/12/2005

SECTION 5: FIRE AND EXPLOSION INFORMATION

Flash Point (Method): NA
Flammable Limits (vol % in air): NA
Autoignition Temperature: NA
Extinguishing Media: Carbon dioxide, foam, water, earth, dry chemical.
Special Fire Fighting Procedures: Self-cooled breathing apparatus.
Unusual Fire and Explosion Hazards: None

SECTION 6: ACCIDENTAL RELEASE MEASURES

Steps to be Taken In Case Material is Released or Spilled: Absorb with sand or inert material, sweep or scoop up and remove, flush area with water. Dispose of in accordance with all federal, state and local laws.

SECTION 7: HANDLING AND STORAGE

Precautions to be Taken in Handling and Storage: Store in original sealed containers in a cool dry area not accessible to children or unauthorized persons.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

Protective Clothing: Long sleeve shirt, pants, or coveralls, water resistant boots.
Eye Protection: Chemical goggles or safety glasses with side shields recommended when handling concentrate.
Respiratory Protection: (exposures in enclosed areas): a respirator with either an organic vapor removing cartridge with NIOSH approved organic vapor (OV) cartridge or canister with any R, P, or HE filters.
Other Protective Measures: Wear appropriate respiratory protection when handling this material.

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

Appearance: Dark liquid or solid material
Boiling Point: 71°F
Vapor Pressure (20°C C): 7.0 x 10^-8 mm Hg
pH: 6.8 - 7.2
Melting Point: NA
Freezing Point: 23°F
Specific Gravity (20°C C): 1.156 at 20/20°C
Vapor Density: NA
Evaporation Rate: NA
Solubility In Water: Insoluble (insoluble)
% VOC: Zero

SECTION 10: PHYSICAL AND CHEMICAL PROPERTIES

Incompatibility: Strong oxidizing agents, solutions of sodium hydroxide, other strong bases, peroxides, metal alkoxides.
Conditions to Avoid: Extremes of heat.
Hazardous Decomposition: Thermal decomposition generates oxides of nitrogen, sulfur, and carbon.

SECTION 11: TOXICOLOGICAL INFORMATION

Oral (acute) LDD50: > 6000 mg/kg (rat)
Dermal (acute) LD50: > 2,000 mg/kg (rabbit)
Inhalation (acute): > 20.6 ml/m^3 (30.56 at 4 he)
Chronic (oral): No carcinogenic or non-carcinogenic effect seen, 150 ppm in diet for two years (rat) and 50 mg/kg/day in single case for two years (dog).
Subchronic (oral): No observable effect level, 1,600 ppm in diet for 30 days (rats and mice).
Neurotoxicity: No delayed neurotoxicity or chronic neurotoxic effects seen.
Genotoxicity: No genotoxicity or increase in mutations seen when administered subchronically.
Teratogenicity: No teratogenic effects seen, no increase in congenital anomalies.
Reproductive Toxicity: No effect on spermatogenesis, testicular weight, or sex ratio in rats or mice.
Maternity Toxicity: No increase in spontaneous abortions, stillbirths, or birth defects in rat studies.

SECTION 12: ECOLOGICAL INFORMATION

This product is toxic to fish. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water by disposal of equipment washwater. Do not allow to drift, or drain or flush equipment onto navigable waters.

SECTION 13: DISPOSAL CONSIDERATIONS

Waste Disposal Methods: Improper disposal of excess product, spray mixture or residue is a violation of federal law. If these wastes cannot be disposed of by methods generally accepted for such products, contact the appropriate agency in your state or the nearest EPA Regional Office for guidance.

SECTION 14: TRANSPORTATION INFORMATION

DOT Shipping Description: Nonmaximum, 301/383, UN 3336.
DOT Hazard Classifications: 3-H3, 22, 4, 3336.
DOT Label Requirement: NA
OSHA Hazard Classification: NA
Reportable Quantity: NA
Hazardous Substance: NA
UN Identification Number: NA

SECTION 15: REGULATORY INFORMATION

EPA SARA TITLE III DATA: NA
Section 313 Substance: NA
Section 311/312 Hazardous Category: NA
Immediate Health: No
Reactive: No
Sudden Impact: No

SECTION 313: TOXIC CHEMICALS: NA
CERCLA: No
CALIFORNIA Prop 65: Developmental Toxic
This product does contain the following chemical(s), as indicated below; currently on the California List of Developmental Toxins.

HPPA RATING: Flammability: 0
Reaction: 0
Health: 1
Effective Date: 10/12/95
NDA = No Data Available NA = Not Applicable
### SECTION 16: OTHER INFORMATION

Please note: Cleary Chemical Corp. believes that the information and recommendations contained herein are accurate as of the date hereof. The information provided herein applies only to the specific product designated and may not be valid where said product is used in combination with any other material or in any process. It is the user's responsibility to determine the suitability of the information for their purposes. No warranty of fitness for any particular purpose, warranty of merchantability, or any other warranty, expressed or implied, is made concerning the information provided.

Effective Date: 10/22/06
For the prevention and control of turf diseases and the diseases of annual and perennial flowers, bedding plants, foliage plants, ground covers, plus deciduous and evergreen trees and shrubs.

ACTIVE INGREDIENT:
Thiophanate-methyl (dimethyl 4,4'-o-phenylenebis[3-thialo]phanate]) .................. 41.25%
OTHER INGREDIENTS ...................................................................................... 58.75%
TOTAL .............................................................................................................. 100.00%
This product contains 4.0 lb thiophanate-methyl per gallon.

KEEP OUT OF REACH OF CHILDREN
CAUTION

FIRST AID

• IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

• IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for further treatment advice.

• IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for further treatment advice.

• IF SWALLOWED: Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.

Have the product container or label with you when calling a poison control center or doctor, or when going for treatment. For 24-Hour Emergency Assistance Call Chemtrec 1-800-424-9300.
