MAVRIK AQUAFLOW
Insecticide/Miticide

For Commercial Use Only on Indoor Plants in
Greenhouses, Interior Plantscapes, and Flower and
Foliage Cuttings and on Outdoor Plants in Ornamental
Plantings, Plantscapes (including Trees, Shrubs), and
Containerized Nursery Stock. Also for Perimeter
Treatments Around Buildings and Outside Surfaces

ACTIVE INGREDIENT:
Tau-fluvalinate [CAS#: 102851-08-9] .......... 22.3%
OTHER INGREDIENTS: ......................... 77.7%
TOTAL: ............................................ 100.0%
MAVRIK AQUAFLOW® is a flowable formulation
containing 2 pounds tau-fluvalinate per gallon (240 g/L).

KEEP OUT OF REACH OF CHILDREN
CAUTION
See back panels for additional
Precautionary Statements and First Aid

Shake Well Before Using

NET CONTENTS: 1 GAL (128 FL OZ) 3.8 L
## Wellmark - DIACON II Gallon 4pg ECL

### Specific Directions
- Mix 0.1-0.25 fl oz of MAVRIK AQUAFLOW® in 2.5 gallons of water (equivalent to 0.2-0.5 fl oz per 5 gallons of water). Apply 5 gallons of spray solution per 1,000 square feet using a low pressure, coarse fan spray for plant-scale applications.

### MAVRIK AQUAFLOW®
**Insecticide/Miticide**

- Precautionary Statements – Hazards to Humans and Domestic Animals – Caution
  - Harmful if swallowed, absorbed through the skin, or inhaled. Causes moderate eye irritation. Avoid contact with eyes, skin, or clothing. Avoid breathing spray mist or vapor. Wear long-sleeved shirt, long pants, shoes, socks, and chemical-resistant gloves (such as or made out of any waterproof material, selection category A).

### FIRST AID:
- **If swallowed**
  - Call a poison control center or doctor immediately for treatment advice. • Have person sip a glass of water if able to swallow. • Do not induce vomiting unless told to do so by a poison control center or doctor. • Do not give anything by mouth to an unconscious person.

- **If on skin or clothing**
  - Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15-20 minutes.
  - Call a poison control center or doctor for treatment advice.

- **If inhaled**
  - Move person to fresh air. • If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. • Call a poison control center or doctor for further treatment advice.

- **In eyes**
  - Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes. • Call a poison control center for treatment advice. Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact 1-800-248-7763 for emergency medical treatment information.

For information or in case of an emergency, call 1-800-248-7763.

**Personal Protective Equipment (PPE):**
Some materials that are chemical-resistant to this product are made of any waterproof material. If you want more options, follow the instructions for category A on an EPA chemical resistance category selection chart.

- All mixers, loaders, applicators and other handlers must wear: • Long-sleeved shirt and long pants • Shoes and socks • Chemical-resistant gloves, and • A NIOSH approved respirator with a dust/mist filter with MSHA/NIOSH approval number prefix TC-21C or R, P, or HE filter.

See Engineering Controls for additional requirements.

- Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.
- Discard clothing or other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them.

**Engineering Controls Statements:** When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

**IMPORTANT:** When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for “applicators and other handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

**User Safety Recommendations:**
- Users should wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Users should remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Users should remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**Environmental Hazards:** This product is toxic to fish and aquatic organisms. This product is toxic to honey bees if bees are exposed to direct application. However, dried residues of this product are non-toxic to honey bees. Treat during non-foraging periods to minimize adverse effects. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Use with care when applying in areas adjacent to any body of water. Drift and runoff from treated areas may be hazardous to fish and aquatic organisms in adjacent aquatic sites. Do not apply when weather conditions favor drift from the target area. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

**Physical/Chemical Hazards:** Do not use or store near heat or open flame.

---

**Storage and Disposal:** Do not contaminate water, food, or feed by storage or disposal. **Pesticide Storage:** Store in a cool, dry place. Pesticides must be stored in a secured area away from other products, food, or feed. Keep pesticide storage areas clean. Always store pesticides in the original container. If a leaky container must be contained within another, mark the outer container to identify the contents. In case of a spill or leak, soak up with soil or other absorbent material. Do not use caustic agents. **Pesticide Disposal:** To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry). **Container Handling:** Non-refillable container. Do not reuse or refill this container. Triples rinse as follows. Empty the remaining contents into equipment application or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture or dispose of in a sanitary landfill, or if allowed by state and local authorities by burning. If burned, stay out of smoke.

**DIRECTIONS FOR USE:** It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.
- Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**Agricultural Use Requirements:** Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

- Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.
- PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is: • Coveralls • Chemical-resistant gloves made of any waterproof material • Shoes plus socks

**Non-Agricultural Use Requirements:** The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Keep unprotected people, children, and pets out of treated area until spray has dried. Some sensitive pets eating or coming in contact with freshly treated plants may demonstrate vomiting and respiratory distress.
Do not apply this product through any type of irrigation system. Not for broadcast use in nurseries. Not for use on sod farms, grass grown for seed, or on golf course turf. Do not apply this product by aerial application.

GENERAL DIRECTIONS

MAVRIK AQUAFLOR® controls insects and controls or suppresses mite pests when used at labeled rates. MAVRIK AQUAFLOR® works primarily through contact action, good spray coverage is necessary. Treat when pests are immature or at a susceptible stage and populations are manageable, before plant damage occurs. Repeat applications as needed, according to the specific use directions given in this label. Residues of MAVRIK AQUAFLOR® can continue to control certain insect pests for a week or longer. Growth dilution, climatic variables, and pest habits determine re-treatment needs.

Dilute MAVRIK AQUAFLOR® in sufficient water to give thorough spray coverage based on previous experience. For best results under varying conditions, a range of use rates is recommended for most uses. Select the higher rates when pest pressure or damage potential is severe. The lower rates often give acceptable economic results. Buffer spray water to pH 5-7, if necessary.

For severe mite infestations, use the highest rate of MAVRIK AQUAFLOR® and use an acaricide in an alternate treatment program. The use of a spreader-sticker, insecticidal soaps, or piperonyl butoxide may improve control of mites and some insects, such as, whiteflies, aphids, thrips, and mealybugs. MAVRIK AQUAFLOR® may be used as a tank-mix. The more stringent product label will apply when tank-mixing two products. When MAVRIK AQUAFLOR® is tank-mixed with wettable powders, add powders to the tank first using good agitation. Check for physical and biological compatibility prior to use.

Dried residues of MAVRIK AQUAFLOR® are non-toxic and non-repellent to honey bees. Treat during non-foraging periods to minimize adverse effects.

Consult your local extension office, pest management consultant, or a Wellmark International specialist for guidance in selecting a rate and timing schedule or tank mix combination that has demonstrated good performance under specific conditions. Follow all use directions and precautions for products used in tank mix.

<tr>
<td>For Outdoor Applications: Use lower rates and greater re-treatment intervals for light to moderate insect pressure. Higher rates and shorter re-treatment intervals for green peach aphids, unexposed insects and heavy pressure of insects. Mite suppression can be obtained using the lower rate; for more residual control of mites, use up to 10 gal water. For maximum mite control, tank mix with an acaricide.</td>

| Perimeter Treatments for include Outside Surfaces | Aphids, Thrips, Mites, Clover Mites, Two-Spotted Spider Mite, Whiteflies, Mealybugs, Leaf-feeding Caterpillars (e.g., Ton, Diuris, Sypsa Moth, Bagnose, Canker Worm, etc.), Ticks, Brown Dog Ticks, American Dog Ticks, Deer Ticks, Paras, Ants, Fire Ants, Crickets, Armyworms, Cucumbermoths, Springtails (Collembola), Acrillids, Mosquitoes, Chips, Cane, Lygus Plant Bugs, Beetles (Flora, Cucumber, Elm Leaf), Leafloppers, Weevils, (Strawberry Root, Blackroot Root), Psyllids, MImites*, American Cockroaches, Smoky Brown Cockroaches, Oriental Cockroaches, Boxelder Bug, Spiders, Silverfish, Fleas, Chinch Bugs, Asian Lady Beetles*, Saw Bugs, Glassy-Wing Sharpshooters | 4-10 fl oz | 0.2-0.5 fl oz (1.3-3 teaspoons) | Apply MAVRIK AQUAFLOR® to perimeters and surfaces of residential, non-commercial, and commercial buildings such as industrial offices, institutional buildings, private homes, display homes, townhouses, condominiums, house trailers, apa complexes, carports, garages, storage sheds, etc. Apply MAVRIK AQUAFLOR® using a low-pressure course fan spray. Apply in even bands to surtax perimeters where pests are a problem. Apply mixture at a volume equivalent to 5 gallons per 1 square foot. Depending on the severity of pest infestations, a re-treatment may be necessary at 35 days. Apply no more than 4 times per month or more than 20 times per year. Typical re-treatment interval is 35 days. Perimeter applications are made to a band of soil vegetation 6 to 10 feet wide around and adjacent structure. Higher volumes of water may be necessary if mulch or leaf litter is present or foliage is dense. Sites may include refuse dumps, vegetation areas, shrubs of woody ornamentals, and fence lines adjacent to or around the structure, and other areas near structure where pests congregate or have been found. Surface applications can be made to all outside of structures listed above and includes porches, and door frames, sashes, and foundations. Apply crack and crevice treatment using a pinstream nozzle at harborage sites. Retreat from applying to th of runoff. |

| Aphids, Thrips, Mites, Whiteflies, Beetles (Beetle, Cucumber, Elm Leaf), Leaffoppers, Springtails (Collembola), Aleydids, Leaf-Feeding Catepillars (i.e., Tent, Orlando, Gypsy Moth, Bagworm, Canker Worm, etc.), Lygus Plant Bugs | 4-10 fl oz 0.2-0.5 fl oz (1.3-3 teaspoons) | Broadcast, fogger, or bench applications. Mix 4-10 fl oz of MAVRIRK AQUAFLOW® in 100 gallons of water (equivalent to 0.2-0.5 fl oz or 1.3-3 teaspoons per 5 gallons of water). Use a higher rate of MAVRIRK AQUAFLOW® for more residual activity. Apply 100 gallons of spray solution which will typically cover 20,000 square feet of greenhouse space using a low pressure, coarse fan spray for bench or broadcast applications. Spray interval is typically 14-28 days but not more than 4 applications per month or 16 applications per crop. When using ElectroStatic Spraying Systems (ESS*), pulseFOO® cold foggers, or other U/V delivery systems, apply the labeled amount of MAVRIRK AQUAFLOW® over the square footage with the equipment manufacturer’s requirement of water. Follow manufacturer’s calibration procedures. |
