RESTRICTED USE PESTICIDE
Due to Acute Toxicity And Toxicity to Birds and Mammals.
For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator’s certification.

DUPONT™ VYDATE® L INSECTICIDE/NEMATICIDE
FOR CONTROL OF STEM AND BULB NEMATODES IN GARLIC
IN THE STATE OF WASHINGTON

DIRECTIONS FOR USE:
It is a violation of federal law to use this product in a manner inconsistent with its labeling. This labeling must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DuPont™ VYDATE® L Insecticide/Nematicide is recommended for use in Washington for the control of stem and bulb nematodes in garlic.

HOW TO USE
At planting, apply 2 to 4 qts per acre as an in-furrow spray. Application must be incorporated into soil by water or by mechanical means.

For postemergence ground applications: Apply 2 to 4 qts per acre in 20 to 40 gals of water per acre as a 1 to 2 inch band placed on the soil surface at the base of the plants. Application to soil must be incorporated by water or by mechanical means. Make applications at 14-21 day intervals.

RESTRICTIONS/PRECAUTIONS
Do not apply more than 8 qts. (2 gal) DuPont™ VYDATE® L per acre per season. Do not apply more than 8 applications per acre per growing season.
Do not apply within 14 days of harvest.

Do not apply by air.
This product may be applied through irrigation systems. Apply this product only through overhead sprinkler, mini (micro) sprinkler and drip irrigation systems. Refer to the EPA registered label for additional chemigation directions.

For application through pressurized sprinkler systems: Apply 2 to 4 qts per acre. Apply 2 to 4 qts per acre in a minimum of 0.25 to 0.50 acre inch of water to move DuPont™ VYDATE® L into the crop root zone. Make applications at 14-21 day intervals.

WSDA Chemigation Guidance
Application off-site is prohibited. The chemigation application must be continuously observed whenever sensitive areas as defined in WAC 16-202-1002(44) (including but not limited to schools, parks, dwellings, occupied buildings or structures, public roadways, and waters of the state) are at risk of being exposed to drift, runoff, or overspray. In order to minimize the potential for application off-site, WSDA recommends that the product only be applied through low pressure irrigation systems (defined as 2 to 35 pounds/square inch measured at the nozzle) with a nozzle release height no higher than 3 feet above the target crop, and that end guns be disabled throughout the application.

Page 1 of 2
EPA SLN NO. WA-000018
An inspection port or a direct access point is required, and it must be positioned immediately upstream of the irrigation mainline check valve and be of sufficient size to allow visual and manual inspection of the check valve and low pressure drain. The inspection port or access point must have a minimum diameter of four inches, if feasible (WAC 16-202-1012[1]).

The chemigation application tank cannot be placed within 20 feet of the wellhead or other sensitive areas. Mixing or loading activities cannot occur within 20 feet of the wellhead or other sensitive areas (WAC 16-202-1008[1]).

WSDA Chemigation Rules (WAC 16-202-1001 through WAC 16-202-1024), and information on USEPA Authorized Alternative Chemigation Safety Equipment, Distribution Uniformity and other chemigation topics are available on the WSDA website (http://agr.wa.gov/PestFert/ChemFert/default.aspx).

**WSDA AQUATIC ADVISORY**

This pesticide is toxic to aquatic organisms (fish and invertebrates) and extremely toxic to birds and mammals. DuPont™ VYDATE® L Insecticide/Nematicide should not be used under this SLN label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Endangered Species Program web site at http://agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx, or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.

**WSDA Container Disposal Guidance**

Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.

This bulletin contains new or supplemental instructions for use of this product which do not appear on the EPA-registered package label. Follow the instructions carefully.
