For use as an insecticide on ornamentals grown in interior spaces, for perimeter insect control on lawns, ornamental trees and shrubs around residential, institutional, public, commercial and industrial buildings, parks, recreational areas and athletic fields, treatment of preconstruction lumber and logs, and for use on buildings/structures.

For control of subterranean termites: For use by individuals/firms licensed or registered by the state to apply termite/pest products. States may have more restrictive requirements regarding qualifications of persons using this product. Consult the pest control regulatory authority of your state prior to use of this product.

**Total** 106.8%

**Dichlorvos rate:** Max. 42% (oz) and min. 56% (oz) max

**Contains 3.2 pounds per gallon as an emulsifiable concentrate.**

**KEEP OUT OF REACH OF CHILDREN CAUTION**

**FIRST AID**

- **Swallowed:** Immediately call a poison center or doctor.
- **Do not induce vomiting;** pulse to the victim by a poison center or doctor.
- **Do not give any liquid to the person.**
- **Do not give anything by mouth to an unconscious person.**
- **Do not give anything by mouth to an unconscious person.**

**IF ON SKIN OR CLOTHING**

- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison center or doctor for treatment advice.

**IF IN EYES**

- Avoid touching eyes and wash vigorously with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.
- Call a poison center or doctor for treatment advice.

**IF INHALED**

- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth to mouth if possible.
- Call a poison center or doctor for further treatment advice.

**NOTE TO PHYSICIAN:** Contains petroleum distillates—vomiting may cause aspiration pneumonia. For emergency medical assistance, contact the Florida Poison Control Center at 1-800-242-8123.

**NOTICE:** Before using this product, read the entire PRECAUTIONARY STATEMENTS, Conditions of Sale and Warranty, Directions for Use, Restrictions and Storage, and Disposal instructions inside the booklet. If the Conditions of Sale and Warranty are not acceptable, return the product unopened within thirty days of purchase to the place of purchase.

**FOR CHEMICAL EMERGENCY: SRF, hairs, fires, exposure, or accidental call CHEMTREC 1-800-424-8300**

**PRECAUTIONARY STATEMENTS**

**Hazards to Humans & Domestic Animals**

CAUTION: Harmful if swallowed, inhaled or absorbed through skin. Avoid contact with skin, eyes or clothing. Wash thoroughly with soapy water after handling and before eating, drinking, chewing gum, or using tobacco. Remove contaminated clothing and wash before reuse.

**Environmental Hazards**

This product is highly toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where water surface is present or to intertidal areas below the mean high water mark. Do not contaminate water by cleaning of equipment or disposal of equipment washwater. Do not apply when weather conditions favor drift to forested areas.

**Physical/Chemical Hazards**

Do not use or store near heat or open flame.

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. States may have more restrictive requirements regarding qualifications of persons using this product. Consult your State Pest Control Regulatory Agency prior to use of this product. Do not apply if exposed to weather conditions that would cause drift on sprayed areas. Do not allow people or pets on treated surfaces until the spray has dried.
Mixing Directions
Mixing Instructions: To produce an emulsion, mix Tengard SFR with water only. For the desired application amounts, refer to the chart below to determine the amount of product required for a given volume of finished emulsion.

Post-Construction Treatment
Applying Tengard SFR by Injection, rodding and/ or spraying a 0.5% emulsion for post-construction treatment. This is generally done during pouring to avoid water intrusion around the foundation.
Do not apply emulsion until location of wells, radiant heat pipes, water and sewer lines, and electrical conduits are known and identified. Care must be taken to avoid puncturing and injection into these elements.

Foundations: Tengard SFR applications made after the concrete has hardened and the framing is in place, and not before the foundation is backfilled. This is done to ensure a minimum depth of four feet. Actual depth of treatment will vary depending on soil type, degree of compaction, and location of existing utilities. Prior to the application of the emulsion, the slab should be backfilled with a minimum of 10 inches of gravel to a depth of 15 inches. It is also recommended to wet down the surface before the emulsion is applied.

Mixing and Application Directions

1. For each 100 square feet of floor area, apply 1 gallon of 0.5% emulsion (100 lbs of dry mix plus 900 lbs of water).
2. Apply the emulsion around the entire perimeter of the building, including all vertical and horizontal joints.
3. Be sure to wet down the surface before applying the emulsion.
4. Prior to the emulsion being applied, the floor and foundation must be clean and free of any debris or contamination.
5. The emulsion should be applied in a manner that ensures complete coverage of the entire floor area.
6. Avoid applying the emulsion over electrical conduits or other utility lines.

* Not recommended for subsoil injection.
Pest Control Specialty Applications

General Application Instructions

Tengard SFR has demonstrated excellent plant safety; however, not all cultivars have been tested. Before treating large numbers of plants of a particular cultivar, treat a few plants and observe prior to full scale application.

Use the higher rates for heavy infestations. Use sufficient volume to cover plant surfaces. Higher volumes should be used if wind or drought conditions exist. Repeat applications as necessary to maintain control.

Do not apply more than 2.0 lbs. a.i./Acres/year for lawn and ornamental use.

Spray Drift Precautions

Tengard SFR may be applied by most conventional ground application sprayers. Entrained cars not to apply when wind velocity favors non-target movement or temperature inversions.

Do not apply by air.

Do not apply within 25 feet of lakes, reservoirs, rivers, permanent swamps, marshes or natural ponds, estuaries, and commercial fish ponds.

Underground Structures and Services

Pools, Poles, and Other Constructions: Previously installed poles and posts may be treated by sub-surface injection. Treat at a depth of at least 3 feet below the surface. Do not treat at a depth insufficient to prevent liquid from running off the surface.

Exterior Treatment: If treatment must be made in difficult situations, such as near walls, chimneys, and above the foundation walls, walls, and around water main entrances, waists, and pipes and utilities which lead through the house to a well or pond, application may be made in the following manner:

a. Treat and remove soil to be treated on heavy plastic sheeting or similar material.

b. Treat the soil at the rate of 4 gallons of emulsion per 10 linear feet per foot of depth at the trench.

c. After the treated soil has absorbed the liquid emulsion, replace the soil in the trench.

Prior to treatment, make a trench near walls or chimneys, consult state, local or federal agencies for guidance regarding approved treatment practices in your area.

Foam Applications

Tengard SFR emulsions may be converted to a foam, and the foam used to control and prevent permanent infestation. When using a Foam Applicator in combination with an emulsion treatment, do not exceed the maximum labeled application rate. Exercise care and safety around electrical utility lines and areas around major electrical installations. Use foam injecitons to prevent liquid from running off the surface.

Localized Application

Foam may be used to treat voids to control or prevent localized infestations of: termites, ants, bees, wasps, and wasps. Ants are attracted to the sugar in the foam. In addition, foams may be used to control and prevent liquid from running off the surface.

Note location of electrical sources prior to foaming to avoid possible shock hazards.

Application Under Slab or in Soil in Crawlspaces to Prevent or Control Termites

Application may be made using Tengard SFR foam alone or in combination with liquid emulsion. The equivalent of at least 4 gallons (36 ounces of Tengard SFR concentrate) of 0.5% emulsion per 10 linear feet contact barrier, or at least 1 gallon (10 ounces of Tengard SFR concentrate) of 0.5% emulsion per 100 square feet of floor area in the treated area must be applied either as emulsion, foam, or a combination of both. For a foam only application, apply Tengard SFR concentrate in sufficient foam concentration and foam volume to deposit a 0.4 ounces of concentrate per 10 linear feet or 0.5 ounces of concentrate per 10 square feet. For example, 1 gallon of 2% emulsion generated as foam to cover 10 linear feet is equal to the application of 4 gallons of 0.5% emulsion per 10 linear feet.

Foam and foam applicator must be used in a manner consistent with volume and agent instructions in order to ensure proper application has been made. The volume and amount of active ingredients are essential to an effective treatment. At least 25% of the labeled liquid emulsion volume of product must be applied, with the remainder to be poured into appropriate areas using foam applicator. Refer to label and use recommended foam application equipment.

Foam applicators are generally a good supplement to liquid treatments in difficult areas, but may be used alone in difficult spots.

Sand Barrier Installation and Treatment

Termite can build mud tubes over treated surfaces as long as they have access to untreated soil and do not have to move Tengard SFR treated soil. Fill in cavities and spaces with builder’s sand or play sand and treat the sand with Tengard SFR. The sand should be treated as soil following the recommended rates listed on the Tengard SFR label.

Retreatment Intervals

Retreatment for subterranean termites can only be performed if there is clear evidence of reinfestation or disruption of the barrier due to construction, excavation, or landscaping and/or evidence of the breaks in the existing barrier. Termites may be able to access the soil away from the treated areas by tunneling and cutting with applications techniques described in this product’s labeling. The timing and type of these retreatments may vary, depending on factors such as termite pressure, soil types, soil conditions and other factors that may be present. Follow the recommendations of the barrier manufacturer and the foaming equipment manufacturer.

Annual retreatment of the structure is prohibited unless there is clear evidence that reinfestation or barrier disruption has occurred.

Lawn and Ornamental Applications

General Application Instructions

Tengard SFR may be used to control insects pests on ornamental, lawn, trees, shrubs, and vines in land industries (including residential, public, institutional, commercial, and industrial buildings). On plants intended for aesthetic purposes in interior gardens and plant spaces. Not for use on plants being grown for commercial sale or on plants grown for sale production. Tengard SFR has demonstrated excellent plant safety; however, not all cultivars have been tested. Before treating large numbers of plants of a particular cultivar, treat a few plants and observe prior to full scale application.

Use the higher rates for heavy pest infestations. Use sufficient volume to uniformly cover plant surfaces. Higher volumes should be used if wind or drought conditions exist. Repeat application if necessary. Application in coordination with compatible surfactants or wetting agents may enhance penetration.

Application: Apply as a spray, as a dust, or as a soil drench. Use sufficiently low pressure to allow for good coverage. Use a spray nozzle set at 10 to 20 psi, as a soil drench, or with a paintbrush. Treat where pests are found or entry points of the structure such as window and door frames and along the foundation.

Mound Treatment: Apply 1 to 2 gallons of emulsion to mound base by sprinkling the mound until it is wet and treat a 4 foot diameter circle around the mound. Use the higher volumes for mounds larger than 12 inches. For best results, apply in cool weather, such as in early morning or late evening hours, but not in the heat of the day.

Bedding Bug: Elm Leaf Beetles and Gypsy Moth Caterpillars: Thoroughly spray tree trunks, building siding or wherever pests congregate, but not to the point of runoff.

Spiders and Bark Beetles: To prevent infestation of trees and woody ornamentals, thoroughly spray the bark but not to the point of runoff.

Lawn: 0.4 oz./100 sq. ft. Field Crops: Tengard SFR in 4 to 25 gallons of water per 1,000 square feet. Use the higher rates for fast knockdown and increased residual control. Dense or excessive (greater than 2 inches) lawn height and soil conditions may require higher volume application rates. Repeat application if necessary. Application in coordination with compatible surfactants or wetting agents may enhance penetration.

Application: Apply as a spray, as a dust, or as a soil drench. Use sufficiently low pressure to allow for good coverage. Use a spray nozzle set at 10 to 20 psi, as a soil drench, or with a paintbrush. Treat where pests are found or entry points of the structure such as window and door frames and along the foundation.

Livestock Spray
Consult a veterinarian before using this product on medicated, stall-bred, aged, pregnant or nursing animals. Sensitivities or allergies may occur even when using any pesticide product on pets. If signs of sensitivity occur, bathe your pet with mild soap and rinse with large amounts of water. If signs continue, consult a veterinarian immediately. Avoid contact with face, eyes, and genitalia. Repeat applications every 2 to 7 days.

Applications for Fruit and Nut Trees Around Residential Sites Only
Apply the appropriate amount of Tanger SFR (see table below) of 100 gallons of water per acre (1 gallon per 60 square feet) to Tanger SFR may be diluted and applied in water provided that the maximum application rate listed above is not exceeded on a per acre basis. For example: when attempting to control Naval-Orangeworm on almonds, using an application volume of 200 gallons per acre (22 gallons per 400 square feet), the maximum legal dilution of Tanger SFR is 6 fluid ounces per 100 gallons (1/2 teaspoon per gallon).

Directions for Application
To protect unwanted insects and pests from wood destroying insects, such as Termites, Carpenter Ants and Bees (Hymenoptera, Powder-post, Old House Bees and others), totally treat wood with a 0.5 to 1% solution of Tanger SFR. This solution can be applied by various methods including spraying, brushing, dipping, and pressure treatment. Frequent monitoring of sites and pressure systems are necessary to ensure that the desired level of Tanger SFR is maintained. Wood can be treated after treatment when dry.

1. For small treatments, totally submerge the wood in the tank for a few days until thoroughly wet and then allow to dry in a suitable location. Apply dipping solutions in which Tanger SFR has been added before use if it has not been used for long periods of time. Periodically check exterior, interior and other deposits from the tank.

2. For pressure treatments the wood must be placed in the pressure chamber, the Tanger SFR solution added to the system pressurized up to 220 psig for one hour depending on the density of the wood. After the pressure is released, the wood should be placed in a suitable location for drying.

3. For spray treatments, spray the wood thoroughly including back and ends.

4. For brush treatments, thoroughly treat all parts of wood surfaces.

STORAGE AND DISPOSAL
Pesticide Storage
Store at temperatures above 10°F (0°C). Shake container well before using. If crystals form, warm to room temperature by placing container in a room at ambient temperature. If crystals dissolve, do not use or store near sunlight or hot surfaces.

Keep out of reach of children and animals.

Store in a dry place and avoid excess heat in storage. Store in original containers only.

Carefully open containers. After partial use, replace lids and close tightly. Do not just concentrate or dilute material into food or drink containers. Do not contaminate other pesticides, fertilizers, water, food, or feeds by storage or disposal.

In case of spill, avoid contact, isolate area and keep out animals and unprotected persons. To confine spills, use surrounding area or absorb with sand, cat litter, commercial clay or gel absorbents. If dry material, cover with impermeable plastic, close in a building or container. Identify contaminate.

Pesticide Disposal
Pesticide waste is toxic, improper disposal of excess pesticide, spray mixture, or residue is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact the State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal
Non-compatible waste: Do not reuse or refill this container.

Once cleaned, all agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer or contact the Age Container Recycling Council at www.containerrecycling.com.

Three rinse container promptly after each use. If recycling is not available or suitable and disposal is in a sanitary landfill or incineration or if allowed by state and local authorities, burying, burning, and disposal by incineration is permissible. For containers containing smaller than 5 gallons, triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for at least 30 minutes after the last application. Fill the container with full water and recap. Shake for 15 minutes. Pour rinse into application equipment or a mix tank or store rinse for later use or disposal. Drain for at least 30 minutes before the next use. Repeat this procedure two or more times.

For containers larger than 5 gallons, triple rinse as follows: Empty the remaining contents into application equipment or mix tank. Fill the container with full water, recirculate and drain for at least 1 hour. Fill the container with full water and recap. Shake for 15 minutes. Pour rinse into application equipment or mix tank or store rinse for later use or disposal. Repeat this procedure two or more times.
ATTENTION

Do not apply to sources of electricity.
Do not allow people or pets on treated surfaces, such as carpets until the spray has dried.
Do not use concentrate or emulsion in logging equipment.

Firewood is not to be treated.

Use only in well ventilated areas.

During any application to overhead areas of structures, cover surfaces below with plastic sheeting or similar material except where exempt.

Do not allow spray to contact food, foodstuffs, food contacting surfaces, food utensils or water supplies. Thoroughly wash dishes and food-handling utensils with soap and water if they become contaminated by application of this product.

Do not treat areas where food is exposed.

During indoor surface applications do not allow dripping or run-off to occur.

Do not apply this product to any room while occupied by patients, the elderly or infirm.

Do not use in aircraft cabins. For use in cargo areas only.

Do not apply when occupants are present in the immediate area in institutions such as libraries, sport facilities, etc.

Do not apply to classrooms when in use.

Do not touch treated surface until dry.

Dealers Must Sell in Original Packages Only.

IMPORTANT INFORMATION
READ BEFORE USING PRODUCT

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product reflect the opinion of experts based on field use and tests, and must be followed carefully. It is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of United Phosphorus, Inc., or Seller. Handling, storage, and use of the product by Buyer or User are beyond the control of United Phosphorus, Inc. and Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold United Phosphorus, Inc. and Seller harmless for any claims relating to such factors.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, UNITED PHOSPHORUS, INC. AND SELLER MAKE NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ON THIS LABEL.

To the extent consistent with applicable law, United Phosphorus, Inc. or Seller shall not be liable for any incidental, consequential or special damages resulting from the use or handling of this product and THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF UNITED PHOSPHORUS, INC. AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF UNITED PHOSPHORUS, INC. OR SELLER, THE REPLACEMENT OF THE PRODUCT.

United Phosphorus, Inc. and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of sale and limitations of warranty and of liability, which may not be modified except by written agreement signed by the duly authorized representative of United Phosphorus, Inc.
