EPA SLN NO. WA-010004

A HORMONE TYPE PRODUCT FOR CONTROL OF PRE-HARVEST DROP IN D’ANJOU PEARS

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

To Reduce Pre-Harvest Drop in D’Anjou Pears

K-Salt Fruit Fix 200 becomes effective in 3 to 4 days after application and controls drop for two (2) weeks. K-Salt Fruit Fix 200 may be applied by ground or air. For optimum results, apply 7 to 14 days before harvest. For maximum effectiveness, sprays should be applied when the temperature is 70°F or higher. The lower rate of K-Salt Fruit Fix 200 can be used under normal weather conditions. If warmer temperature conditions (i.e. 90-95°F) are expected to occur for a period greater than 3 consecutive days following the application, then the higher rate of K-Salt Fruit Fix 200 (up to 32 fl. oz. per acre) may be used. A repeat application of K-Salt Fruit Fix 200 is recommended only if the efficacy of the first application of product is declining, such as due to high temperatures. Consult your local Extension Pomologist as to time of application and rates to be used in your area for your specific stop drop situation.

GROUND APPLICATION: For dilute spray, mix 3.6 to 4.8 fl. oz. K-Salt Fruit Fix 200 per 100 gallons of water and apply 300 to 600 gallons of the spray mixture per acre of trees. For concentrate spray, use 16 to 32 fl. oz. K-Salt Fruit Fix 200 (25 to 50 grams of active ingredient) per acre in sufficient water to ensure good coverage of trees.

AERIAL APPLICATION: Use 16 to 32 fl. oz. K-Salt Fruit Fix 200 (25 to 50 grams of active ingredient) in 5 to 10 gallons of water per acre. Aircraft should utilize spray equipment which gives thorough coverage to all portions of the trees. Apply only when weather conditions favor minimal spray drift.
USE RESTRICTIONS

1. Do not make more than two (2) applications of K-Salt Fruit Fix 200 at 16 fl. oz (25 grams a.i./A) or one (1) application of K-Salt Fruit Fix 200 at 32 fl. oz. (50 grams a.i./A) per stop drop season. Allow 7 to 14 days between applications.
2. Do not delay picking beyond optimum maturity.
3. PHI - Do not apply within two (2) days of harvest.
4. Do not apply this product through any type of irrigation system.

**WSDA Container Disposal Guidance:** Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the internet from WSU at [http://pep.wsu.edu/waste/wd.html](http://pep.wsu.edu/waste/wd.html) or from WSDA at [http://agr.wa.gov/PestFert/Pesticides/WastePesticide.html](http://agr.wa.gov/PestFert/Pesticides/WastePesticide.html). Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.

**IMPORTANT**

This labeling must be in the possession of the user at the time of pesticide application.

This bulletin contains new or supplemental instructions for use of this product, which may not appear on the package label. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

This label for K-Salt Fruit Fix 200 expires and must not be distributed or used in accordance with this SLN registration after December 31, 2011.
