EFFECTS ON TARGET INSECTS

FLEA AND TICK CONTROL (OUTDOORS)

In summer months, fleas and ticks frequently become established in lawns and pet resting areas surrounding the home. For best control of fleas and ticks (including but not limited to Bitter Tick, Black and Brown Dog tick, Deer Tick (Hindes Infestations), Lone Star Tick, Western Black-legged Tick, Wood Tick) a regular treatment program should be followed. Treat once a month when pets first appear in lawn in May-June and continue until late summer (September-October). Fall temperatures below 50°F decrease pest activity. Eliminating weeds around the home and mowing lawns frequently reduces the hiding places for these pests. Note Dogs, cats, their kennel or bedding area should also be treated with a registered product. In addition, if fleas and ticks are indoors on carpets or pet resting areas, use a registered product. It is very important that at all times – outdoors, indoors and also the pet be treated with appropriate labeled products to achieve satisfactory control of any of these areas. In addition, it would serve as a source of contamination to the entire premises.

WARRANTY AND DISCLAIMER: This product is guaranteed to the extent of the purchase price only when used according to label directions.
