**CIMARRON® MAX**

Part B contains 29.6% 2,4-dichlorophenoxyacetic acid (2,4-D) or 2.87 pounds per gallon (344 g/L).

**Other Ingredients**
- Dimethylamine salt of 2,4-dichlorophenoxyacetic acid
- Dimethylamine salt of dicamba (3,6-dichloro-o-anisic acid)

**For Use on Pastures, Rangeland or Established Grasses on Acreage Enrolled in the Conservation Reserve Program**

**KEEP OUT OF REACH OF CHILDREN**

**DANGER PELIGRO**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**DANGER! CAUSES EYE DAMAGE.**

**ENVIRONMENTAL HAZARDS**

This pesticide is toxic to fish and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present, or to the banks or sediments of ditches or streams. Do not contaminate water when applying this product or when cleaning equipment. Do not apply until 60 days before harvest. Do not contaminate irrigation or drainage waters by applying this product unless irrigation water is excluded by a properly working drainage system. Do not contaminate surface or ground water by disposal. Do not contaminate water supply or storage tank areas with this product. This chemical has properties and characteristics associated with the potential for leaching, volatilization, runoff, or erosion, and through these transport mechanisms may enter surface and ground water supplies. Use water recycling equipment, if used, when handling 2,4-D pesticides at such sites to prevent contamination. Application around a cistern or well may result where the water table is shallow, may result in groundwater contamination. Application around a cistern or well may result in contamination. Application around a cistern or well may result in contamination. Application around a cistern or well may result in contamination. Application around a cistern or well may result in contamination. Application around a cistern or well may result in contamination.

**USER SAFETY RECOMMENDATIONS**

**AGRICULTURAL USE REQUIREMENTS**

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**DANGER!**

**CAUSES EYE DAMAGE.**

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

- Chemical resistant apron when applying, mixing or loading, cleaning up spills or equipment, or otherwise exposed to the concentrate.
- Long-sleeved shirt and long pants.
- Face shield or goggles.
- Shoes and socks.
- Gloves.

**DUPONT™ CIMARRON® MAX PART B HIGHLIGHTS**

- W hen triple rinsing the pesticide container, be sure to add the rinsate to the spray mix.
- D o not discharge excess material on the soil at a single spot in the field or mixing/loading station.
- D uPont will not be responsible for losses or damages resulting from the use of this product in any manner not specified by the label. This includes situations where the product is used under non-recommended conditions, or in environments (such as extreme temperature or moisture), abnormal soil conditions, or cultural practices may be injured by the product. CIMARRON® MAX PAR T B is intended for use on non-leguminous pastures and rangelands, but certain conditions, such as seeding or interseeding, may be contraindicated due to the inclusion of active ingredients.
- W hen handlers use enclosed cabs or aircraft in a manner that meets the requirements listed in the Worker Protection Standard, they can apply the product without requiring personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are not spraying water contaminants.
- W hen using the product, always wear appropriate PPE, such as chemical-resistant gloves, protective eyewear, and protective clothing. Also, follow the precautions for application rate and method of application. The concentration of the product and the application method may affect its effectiveness and the need for additional treatments.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**KEEP OUT OF REACH OF CHILDREN**

- P ERIODIC USE: Herbicides are designed to be used periodically to control weeds or brush in pastures or rangelands. Always follow the label instructions carefully.

**FIRST AID**

<table>

**PRECAUTIONARY STATEMENTS**

- HAZARDS TO HUMANS AND DOMESTIC ANIMALS:
- D A M A G E C A U S E S E Y E :
- D A M A G E C A U S E S S KIN :
- D A M A G E C A U S E S M O U N T :

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

- W ear appropriate protective clothing, such as long-sleeved shirts, long pants, and gloves, when handling the product.
- W ear protective eyewear or goggles to protect your eyes.
- W ear chemical-resistant gloves to protect your skin.
- W ear protective footwear or closed-toe shoes to protect your feet.
- W ear a respirator or mask, if needed, to protect your respiratory system.

**ENVIRONMENTAL HAZARDS**

- W hile using the product, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using the product, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**IMPORTANT INFORMATION**

- D IE EMBRYONIC FERTILIZATION:
- D IES GROWING ON LAND ENROLLED IN THE CONSERVATION RESERVE PROGRAM (CRP):
- D IES GROWING ON LAND ENROLLED IN THE CONSERVATION RESERVE PROGRAM (CRP):

**PESTICIDE HANDLING**

- V egetables are typically not affected by CIMARRON® MAX PAR T B. However, if they are treated, wash thoroughly before consumption.

**DIRECTIONS FOR USE**

- W hen using CIMARRON® MAX PAR T B, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**AGRICULTURAL USE REQUIREMENTS**

- W hen using CIMARRON® MAX PAR T B, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**PRODUCT INFORMATION**

- W hen using CIMARRON® MAX PAR T B, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**ENVIRONMENTAL CONDITIONS AND Biological Activity**

- W hen using CIMARRON® MAX PAR T B, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**APPLICATION INFORMATION FOR PASTURES AND Rangeland Use Rates for Pastes and Rangeland**

- A pplications of CIMARRON® MAX PAR T B are intended for use on established grasses, including CRP. Do not apply to grasses that have not been established for at least 60 days after planting or in CRP. Do not apply to standing grasses that are less than 4" tall or in diameter and are actively growing.

**APPLICATION INFORMATION FOR CONSERVATION RESERVE PROGRAM (CRP)**

- A pplications of CIMARRON® MAX PAR T B are intended for use on established grasses in CRP. Do not apply to standing grasses that are less than 4" tall or in diameter and are actively growing.

**WEEDS CONTROLLED OR SUPPRESSED IN PASTURES OR Rangeland**

- E nvironmental conditions, such as the presence of high water tables, may affect the effectiveness of CIMARRON® MAX PAR T B. Consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**TANK MIXES**

- T he tank mixture of CIMARRON® MAX PAR T B plus CIMARRON® MAX PAR T A may be applied postemergence to labeled grasses for weed control or suppression. However, the application rate and method of application may affect its effectiveness and the need for additional treatments.

**WEEDS AND BRUSH CONTROLLED OR SUPPRESSED WITH TANK MIX OF DUPONT™ CIMARRON® MAX PAR T A PLUS CIMARRON® MAX PAR T B**

- W hen using CIMARRON® MAX PAR T B, always follow the label instructions carefully. Do not apply the product in a manner that could lead to water contamination.
- W hen using CIMARRON® MAX PAR T B in areas with high water tables, consult the label for specific recommendations on application techniques to ensure proper mixing and avoid groundwater contamination. If the mixture is not applied properly, it may result in contamination of drinking water or groundwater.

**PROTECTIVE CLOTHING AND EQUIPMENT**

- W eed control in areas of thin grass may not be as satisfactory. However, a grass canopy that is too dense at application can intercept water and nutrients, potentially affecting the outcome of weed control.

**USER SAFETY RECOMMENDATIONS**

- W ear appropriate protective clothing, such as long-sleeved shirts, long pants, and gloves, when handling the product.
- W ear protective eyewear or goggles to protect your eyes.
- W ear chemical-resistant gloves to protect your skin.
- W ear protective footwear or closed-toe shoes to protect your feet.
- W ear a respirator or mask, if needed, to protect your respiratory system.

**APPLICATION INFORMATION FOR CONSERVATION RESERVE PROGRAM (CRP)**

- A pplications of CIMARRON® MAX PAR T B are intended for use on established grasses in CRP. Do not apply to standing grasses that are less than 4" tall or in diameter and are actively growing.

Do not apply to grasses that have not been established for at least 60 days after planting or in CRP. Do not apply to standing grasses that are less than 4" tall or in diameter and are actively growing.
SPECIFIC WEED PROBLEMS FOR CIMARON® MAX PART A  
+ CIMARON® MAX PART B TANK MIXTURES

Note: Thermophiles cause some discoloration of weed species directly in contact.

1. Where routine spraying practices include shared equipment, frequently be switched between applications of CIMARON® MAX PART A.

2. When CIMARON® MAX PART B is tank mixed with other pesticides, all required cleanout procedures should be examined and the most rigorous procedure should be followed.

3. In established Bermudagrass pasture, Pensacola bahiagrass control: Cold-weather failures, if any, are usually the result of low temperature episodes that interfere with the dissolution of the CIMARON® MAX PART A.

4. For best results, apply from two weeks before blooming to two weeks after blooming. Application height should be consistent with pest control objectives, and that allow safe operation of the aircraft.

5. Where routine spraying practices include shared equipment, frequently be switched between applications of CIMARON® MAX PART A.

6. As the tank is filling, add tank mix partners (if desired) then add the necessary volume of a spray adjuvant, as recommended by your applicator. The necessary volume of a spray adjuvant should be based on the volume of the tank, the application rate, and the application method.

7. To reduce the potential for movement of treated soil due to wind erosion, do not apply to powdery dry or light sandy soils.

8. Do not apply to irrigated land where the tailwater will be used to irrigate crops.

9. For best results, apply the tank mixture at Rate I plus 2,4-D Low Volume Ester at 8 ounces ai/acre in the fall. Applications of the tank mixture in the spring, if necessary, for best results, apply from two weeks before blooming to two weeks after blooming.

10. For product information call: 1-888-6- DUPONT (1-888-638-7668).

11. Internet address: http://cropprotection.dupont.com/

12. All rights reserved.

13. Application height. Application height is the lowest height consistent with pest control objectives, and that allow safe operation of the aircraft.

14. Boom length (aircraft), and application height.

15. Boom length (aircraft). Distance from the boom to the ground. The height at which the boom touches the ground is determined by the weight and configuration of the boom, and the height of the aircraft.

16. Mixture of tank mix partners, fertilizers, and pesticides. The mixture of tank mix partners, fertilizers, and pesticides should be selected based on the pest control objectives, and the most rigorous procedure should be followed.

17. Temperature and humidity. Temperatures and humidity affect the rate of evaporation of water from the application. The rate of evaporation is directly proportional to the temperature, and inversely proportional to the humidity.

18. Shielded sprayers. Shielded sprayers are designed to reduce spray drift potential. The spray drift potential is high during a surface temperature inversion. Surface inversions restrict vertical air mixing, which may cause the droplets to drift to the ground.

19. neighbors. Neighbors may be affected by drift. If you live near a neighbor, it is recommended that a sprayer be dedicated to CIMARON® MAX PART B to further reduce the chance of crop injury.

20. Air assisted (air blast) field sprayers. Air assisted (air blast) field sprayers are designed to reduce spray drift potential. The spray drift potential is high during a surface temperature inversion. Surface inversions restrict vertical air mixing, which may cause the droplets to drift to the ground.

21. Temperature inversions. Temperature inversions occur when the temperature of the atmosphere decreases with altitude. This can result in the formation of a layer of cool air near the surface, which prevents vertical air mixing.

22. Setting up equipment to produce larger droplets to compensate for droplet evaporation can reduce spray drift potential. Droplet size is affected by the size of the orifice and the pressure of the air blast.

23. For product information call: 1-888-6- DUPONT (1-888-638-7668).
