Agricultural Use Requirements

The requirements in this section apply to use of this product that are not in the scope of the Worker Protection Standard for agricultural production.(40 CFR Part 170). The WPS applies where this product is used to produce agricultural plants in forests, nurseries, or greenhouses.

Non-Agricultural Use Requirements

This product is considered non-agricultural if it is used for ornamental plants or trees in landscaping, recreation, or horticulture, or to produce crops where this product is not used in the scope of the Worker Protection Standard for agricultural production. The Worker Protection Standard, Standards for OSHA and NFPA, are available on this label, refer to supplemental labeling under "AGRICULTURAL USE REQUIREMENTS" in the DIRECTIONS FOR USE section for information about this standard.

If you have questions about the applicability of Federal law to use of this product, you may contact the Office of Pesticide Programs, USDA, at (202) 720-3365 or via email at pesticide@usda.gov. For other questions, contact the appropriate state or local regulatory agency.

To order the current version of the Supplemental Labeling, contact: Monsanto Company, Health and Safety Service, Roundup WeatherMAX Herbicide (EPA Reg. No. 524-537), 800 Lindbergh Blvd., St. Louis, MO 63167-1570.

STORAGE AND DISPOSAL

General information about storage and disposal is available on this label, refer to supplemental labeling under "AGRICULTURAL USE REQUIREMENTS" in the DIRECTIONS FOR USE section for information about this standard. To order the current version of the Supplemental Labeling, contact: Monsanto Company, Health and Safety Service, Roundup WeatherMAX Herbicide (EPA Reg. No. 524-537), 800 Lindbergh Blvd., St. Louis, MO 63167-1570.

To order the current version of the Worker Protection Standard, Standards for OSHA and NFPA, are available on this label, refer to supplemental labeling under "AGRICULTURAL USE REQUIREMENTS" in the DIRECTIONS FOR USE section for information about this standard.

Detailed information about storage and disposal and other requirements are in the Agricultural Use Requirements section of this label, refer to supplemental labeling under "AGRICULTURAL USE REQUIREMENTS" in the DIRECTIONS FOR USE section for information about this standard. To order the current version of the Supplemental Labeling, contact: Monsanto Company, Health and Safety Service, Roundup WeatherMAX Herbicide (EPA Reg. No. 524-537), 800 Lindbergh Blvd., St. Louis, MO 63167-1570.

Complete Directions for Use

Herbicide for Roundup Ready® Crops

Selective broad-spectrum weed control in Roundup Ready® crops
Non-selective, broad-spectrum weed control for many agricultural systems and farmsteads

ACTIVE INGREDIENT:
*Glyphosate, N-(phosphonomethyl)glycine, in the form of its potassium salt .................................................. 48.8%
OTHER INGREDIENTS: ...................................................................................... 51.2%

Contains 660 grams of the active ingredient glyphosate, in the form of its potassium salt, per liter or 5.5 pounds per U.S. gallon, which is equivalent to 540 grams of the acid, glyphosate, per liter or 4.5 pounds per U.S. gallon (39.8% by weight).

Keep out of reach of children

CAUTION

Avoid contact with eyes, skin, or clothing
Avoid breathing vapor or spray mist

FIRST AID

IF IN EYES
• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses if present after the first 5 minutes then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

See inside for additional Precautions.

Not all products listed on this label are registered for use in California. Check the...
All reference throughout this label to concentration of this product in a spray solution are in parts per million (ppm).

Keep by-pass and return lines on or near the bottom of the tank to minimize drift potential. The interaction of many equipment- and weather-related factors determines the potential for crop injury. Some tank-mix products have the potential to cause crop injury under certain conditions, which may include high temperatures, low humidity, and/or inversion conditions as described below.

Avoiding spray drift at the application site is the responsibility of the applicator. Do not apply this product within 100 feet of non-target crops or any desirable vegetation.

State Specific Limitations on Aerial Application

Selective application equipment allows this product to be applied to weeds in a manner that minimizes drift potential. Aerial application is the most effective method for reducing drift potential when applying tank mixtures with this product. For full details on the State Specific Limitations on Aerial Application, refer to the individual use section of this label and on separate supplemental labeling associated with this product. When using a tank-mix product, the user is responsible for ensuring that the specific application instructions on this label, the individual use sections of this label, and any supplemental labeling for this product are followed. This product will not prevent drift if the application is made improperly or under conditions that favor drift potential.

The State of California has developed a set of guidelines to ensure that aerial spray applications of tank mixtures containing this product are conducted in an environmentally responsible manner. These guidelines are intended to reduce the potential for drift, prevent or minimize injury to non-target vegetation, and ensure that all appropriate measures have been taken to protect the environment.

Written Directions

Written directions MUST be submitted by or on behalf of the applicator to the Fresno County Agricultural Commissioner at least 30 minutes prior to sunrise and/or later than 30 minutes after sunset without the use of any commercial helicopter, fixed-wing aircraft, or other aircraft. Written directions MAY be submitted by or on behalf of the applicator to the Fresno County Agricultural Commissioner at least 30 minutes prior to sunrise and/or later than 30 minutes after sunset with the use of any commercial helicopter, fixed-wing aircraft, or other aircraft.

Written directions and supplemental labeling for this product are published in the November 13, 2019 California Environmental Quality Act (CEQA) Notice of Completion and the California Environmental Quality Act (CEQA) Notice of Completion, respectively. Written directions are not necessary when applying this product in the manner described below.

RECOMMENDATION: It is recommended that all aerial applications be performed by a Certified Spray Operator.

Use only the correct nozzle for the intended application as specified on the equipment manufacturer's nozzle selection chart.

APPLICATION EQUIPMENT AND TECHNIQUES

APPLICATION EQUIPMENT AND TECHNIQUES

AERIAL APPLICATION EQUIPMENT

Aviation agencies must follow the guidelines of the Federal Aviation Administration (FAA) and the California Environmental Quality Act (CEQA) as they apply to aerial applications in California. All aircraft must be inspected and certified at a Fresno County Agricultural Commissioner approved fly-in. Nozzles must be used to ensure proper spray pattern and performance. All aircraft must be equipped with a sight or surveillance system and be operated according to the manufacturer's instructions. The selection of the appropriate nozzle for the intended application is critical to minimizing drift potential. The nozzle to be used must be specified on the label or on separate supplemental labeling for this product. The nozzle must be selected based on the droplet size that will be produced by the aircraft and the field conditions. The nozzle must be selected based on the droplet size that will be produced by the aircraft and the field conditions.

APPLICATION EQUIPMENT AND TECHNIQUES
This product is a selective herbicide that can be used to control a variety of weeds. It is a systemic herbicide, meaning it is absorbed through the plant's leaves and translocated to all parts of the plant, including the roots. It is used to control weeds that are not residual or that are not killed by previous herbicide treatments. This product is effective for controlling weeds in a wide range of crops and can be used as a tank mixture with other herbicides or fungicides to control a broader range of weeds.

**Recommendations**

1. **Applicators**
   - Before applying this product, it is important to read and follow all label instructions and precautions. The label provides specific instructions for the use of this product in various crops and situations. The label also includes information on the use of this product in conjunction with other herbicides or fungicides.

2. **Special Considerations**
   - This product can be used in a variety of crops, including corn, soybeans, cotton, peanuts, rice, and sugar beets. It is effective against a wide range of weeds, including broadleaf weeds, grasses, and sedges. It is important to follow the label instructions carefully to ensure the proper use of this product.

3. **Environmental Considerations**
   - This product is a systemic herbicide, meaning it is absorbed through the plant's leaves and translocated to all parts of the plant, including the roots. It is important to follow all label instructions and precautions to minimize the risk of off-site movement and drift. This product is not effective against weeds that are not residual or that are not killed by previous herbicide treatments.

4. **Storage and Handling**
   - This product should be stored in a cool, dry place away from direct sunlight and out of the reach of children. It should be handled with care to prevent contamination of the environment or injury to people."
TANK MIXTURES: This product may be tank-mixed with the following products and applied prior to crop emergence. Ensure that the products in the tank mixture are labeled for use with the crop and that the tank mixture does not exceed the maximum application rate for any product in the tank mixture.

USE INSTRUCTIONS: This product may be applied using a hooded sprayer or shielded spray equipment. For directions for use with Roundup Ready soybean and Roundup Ready 2 Yield soybean, see the “ROUNDUP READY CROPS” section of this label.

TYPES OF APPLICATION: Those listed in Section 9.0, plus Preharvest (except buffalo gourd) and Postharvest (except soybean, sorghum, and sugarcane). For hard-to-control annual weeds, such as fall panicum, barnyardgrass, blue finger grass, brown pigweed, redroot pigweed, wild and slender amaranth, and wild goosefoot, apply 16 to 22 fluid ounces of this product per acre using aerial application equipment. Allow a minimum of 7 days after application before planting any crops in the treated area. For control of annual weeds in sugarcane, apply a maximum of 7 fluid ounces of this product per acre using aerial application equipment. Allow a minimum of 7 days between application and harvest of LAST RATOON CANE ONLY.

RESTRICTIONS: Do not exceed a total application rate of 5.3 quarts of this product per acre per year. Do not apply more than 3.3 quarts of this product per acre for preharvest applications. Use of this product is limited to one application per field per season. This product is not effective on pre-emergence weed control. For hard-to-control annual weeds in sugarcane, apply 16 to 22 fluid ounces of this product per acre using aerial application equipment and a minimum of 7 days after application. Apply this product at the following rates and timing according to the State in which it is used:

- Apply 9 to 21 fluid ounces of this product per acre 4 to 10 weeks before first or second ratoon cut.
- Apply 9 fluid ounces per acre 3 to 5 weeks before first or second ratoon cut.

Sugarcane Ripening

Aim EC; Aim EW; Assure II; Authority Assist; Authority Elite; Authority First

- Apply 11 fluid ounces per acre 4 to 6 weeks before harvest of LAST RATOON CANE ONLY. Do not apply this product more than 300 days prior to harvest.

Preharvest

TruFlex

- Apply 5 fluid ounces per acre 3 to 5 weeks before harvest of LAST RATOON CANE ONLY. Do not apply this product more than 300 days prior to harvest.

- For hard-to-control annual weeds in sugarcane, apply 16 to 22 fluid ounces of this product per acre using aerial application equipment. **USE INSTRUCTIONS:** This product may be applied up to the day of harvest or emergence of forage grasses using a wiper applicator or the control of weeds within 3 months before applying this product. This product may be applied in pastures to suppress weeds, including wild oats, wild barley and other grasses. In pastures, the product may be applied up to 30 days before the date of livestock grazing.

- **APPLICATION RATES:** Use 1 to 3 gallons of water per acre to control weeds. At 1 gallon per acre, apply this product in the early spring, just before the weeds begin to grow. At 3 gallons per acre, apply this product in the late spring or early summer. At 2 gallons per acre, apply this product in the late spring or early summer.

- **PRECAUTIONS:** Avoid contact of spray, drift or mist of this product with foliage or plant parts. Take care not to spray or allow spray to drift outside the target area in order to avoid damage to other plants.

- **RESTRICTIONS:** For spot treatment or use with a wiper applicator at rates of 2 to 4 quarts per acre, the application may be made up to 3 months before the date of livestock grazing.
This product will control or suppress many annual weeds growing on or near the treated area. Ammonium sulfate may be applied to enhance herbicide activity on rangeland. Do not add ammonium sulfate to the spray mixture before application. If ammonium sulfate is added, the resulting spray mixture will be extremely dangerous to livestock. Ammonium sulfate may also be toxic to many aquatic organisms if used on stream banks or irrigation ditches. Follow-up applications in infestations can be made 30 days after the initial application. Use of ammonium sulfate may injure certain crops or cause injury to desirable grasses if used too soon after treatment. Ammonium sulfate may be injurious to certain turfgrasses if used too soon after treatment. Do not apply to frozen or snow covered ground. Remove livestock before application on rangeland. Reduce number of livestock grazing after application since a small amount of the herbicide may remain in the leaf blades and be ingested with the forage. Non-ionic surfactant is mixed in the spray mixture for improved weed control. This product is a postemergence herbicide. Do not apply more than 2 quarts of this product per acre for pasture grasses except for renovation use as described on this label and the label directions for each product. Do not use on rangeland or pasture grasses which are not Roundup Ready seeds. Do not apply to frozen or snow covered ground. Remove livestock before application. Do not apply more than 4.1 quarts per acre in subsequent years to eliminate the seedbank before reestablishment of the pasture. Do not apply more than 11.5 quarts per acre in sequential years to eliminate the thatch layer produced by slowly decaying culms. Allow new growth to resume growing under moist soil conditions as effects of this product wear off. Some weeds with multiple germination times, or suppressed (stunted) weeds, might require a second application. Follow-up applications in sequential years can be made 30 days after application before planting any crop not listed on this label. DO NOT combine these directions for use with the product that may be made onto a specified Roundup Ready crop during the crop-growing season. Application rates during stand establishment (seeding year). Bayer Reference ID: 2018-NFY266
TYPES OF APPLICATION: Preplant; At-Planting; Preemergence; Postemergence

Field corn hybrids with Roundup Ready 2 Technology include Roundup Ready Corn (RHS) and Staple Corn. 

**USE INSTRUCTIONS:** Refer to the following table for the maximum application rates of this product. Do not apply this product in combination with 2,4-D or any of its esters.

**PRECAUTIONS:** Do not apply this product for preharvest weed control to cotton and soybeans. Reading and following label directions for all products in the tank mixture is required.

**RESTRICTIONS:** Maximum quantity of this product that may be applied for annual and perennial weed control prior to crop harvest after 20% plant emergence is 4.1 quarts (132 fluid ounces) per acre.

**RESTRICTIONS:** Maximum application rates of 4.1 quarts per acre may be made before weeds exceed 4 inches in height.

**RESTRICTIONS:** Total for all Preplant, At-Planting, Preemergence, and Postemergence (In-crop) applications from cracking to layby combined is 2.5 quarts per acre.

**RESTRICTIONS:** A preharvest application may be made only if the combined total for all Preplant, At-Planting, Preemergence, and Postemergence (In-crop) applications from cracking to layby does not exceed 5.3 quarts per acre. (At this crop stage, use the V13 stage or 100 GDU [Growing Degree Units] before flowering.)

**RESTRICTIONS:** Maximum Preplant application rate 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate is 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate is 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate is 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate is 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate is 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rate is 44 fluid ounces per acre.

**RESTRICTIONS:** Maximum application rates of 4.1 quarts per acre may be made before weeds exceed 4 inches in height.

**RESTRICTIONS:** Maximum quantity of this product may be applied for all applications in the state of Arizona only, up to 32 fluid ounces of this product per acre either as an over-the-top application or as a spot application for annual weeds. Read and follow label directions for all products in the tank mixture.

**RESTRICTIONS:** Maximum quantity of this product may be applied for annual and perennial weed control prior to crop harvest after 20% plant emergence is 32 fluid ounces per acre.

**RESTRICTIONS:** Maximum quantity of this product that may be applied for annual and perennial weed control prior to crop harvest after 20% plant emergence is 4.1 quarts (132 fluid ounces) per acre.
**Types of Application:**

- **Preplant:**
  - Use on Roundup Ready cotton or Roundup Ready Flex cotton on labeling for the "Roundup Ready Cotton" section of this label, or with any other directions for Roundup Ready Soybean, preharvest application rate:
    - 12.8 fluid ounces per acre
  - Surfactant to this product for preharvest application to Roundup Ready Flex cotton using ground application equipment.

- **At-Planting:**
  - Maximum single application rate: 22 fluid ounces per acre.
  - Maximum combined total amount of this product may be applied during flowering stages of soybean.
  - Applications for this product must not be pre-harvest applications.

- **Preemergence:**
  - Annual and perennial weeds are normally found approximately 2 to 5 weeks after planting. If the initial application is delayed and weeds are larger, apply a higher rate of this product. This product may be applied up to the main stem with a fully developed leaf (R3 stage). Refer to the "ANNUAL WEEDS SECTION" of this label for more information on Roundup Ready Soybean.

- **Postemergence (In-crop):**
  - Use an initial application using ground application equipment. This product may be tank-mixed with the following products for in-crop application using Roundup Ready Soybean.

- **Post-Harvest:**
  - Applications to soybean may be made for weed control prior to harvest of soybean grain or feeding of soybean grain, forage or hay.

**Restrictions:**

- Allow a minimum of 14 days between application and harvest for soybean. Read and follow label directions for all products in the tank mixture.

- Applications of this product to Roundup Ready Soybean are restricted to the use of this product in Roundup Ready Soybean. See the "PRODUCT INFORMATION" section of this label for more information on Roundup Ready Soybean.

- Up to 22 fluid ounces of this product per acre may be applied in Roundup Ready Soybean. Different rates might be needed for control of new flushes of weeds. Higher rates might be needed for control of late flushes of weeds.

- This product may be applied before, during or after planting. This product may be applied for weed control after harvest of soybean. Read and follow label directions for all products in the tank mixture.

**Restrictions:**

- Application of this product to Roundup Ready Soybean is restricted to the use of this product in Roundup Ready Soybean. See the "PRODUCT INFORMATION" section of this label for more information on Roundup Ready Soybean.

- This product may be applied as a single application or in combination with any registered herbicide for weed control in soybean. Read and follow label directions for all products in the tank mixture.

**Restrictions:**

- Applications of this product to Roundup Ready Soybean are restricted to the use of this product in Roundup Ready Soybean. See the "PRODUCT INFORMATION" section of this label for more information on Roundup Ready Soybean.

- This product may be applied for weed control after harvest of soybean. Higher rates might be needed for control of new flushes of weeds.

- This product may be applied for weed control in Roundup Ready Soybean. Read and follow label directions for all products in the tank mixture.
products and applied postemergence (in-crop) over the top of Roundup TANK MIXTURES: This product may be tank-mixed with the following products, in fences, in dry ditches and canals, along ditch banks, driveways, farm roads, greenhouses and shadehouses. For control of weeds listed in the "ANNUAL WEEDS RATE TABLE," apply a 0.4-percent solution of this product for control of annual and perennial weeds, and a 4- to 8-percent solution of this product for control of annual and perennial weeds, respectively. For enhanced results on hard-to-control perennials, such as bermudagrass, dock, field bindweed, hemp dogbane, milkweed and Canada thistle, apply a 1.5-percent solution of this product to control these weeds, apply this product in a tank-mix with 2,4-D.

3.13 ANNUAL WEEDS—Tank Mixtures for Fallow and Reduced Tillage Systems

For use in cotton, corn, sugar, barley, alfalfa, vegetables, soybeans, wheat and field corn. In corn and soybeans, the product may be applied in cropping systems that do not allow tillage operations. This product is applied in a tank-mix with 2,4-D, Dicamba or Tordon 22K.

3.14 PERENNIAL NEEDS RATE SECTION

Enhanced control of certain hard-to-control weeds can be achieved by tank-mixing this product, as indicated in the following rate table, in 2 to 15 gallons of water per acre. For control of weeds listed in the "ANNUAL WEEDS RATE TABLE," apply a 0.4-percent solution of this product for control of annual and perennial weeds, and a 4- to 8-percent solution of this product for control of annual and perennial weeds, respectively. For enhanced results on hard-to-control perennials, such as bermudagrass, dock, field bindweed, hemp dogbane, milkweed and Canada thistle, apply a 1.5-percent solution of this product to control these weeds, apply this product in a tank-mix with 2,4-D.

**Weed Control**

For partial control, apply when most plants have reached the 2-leaf stage of growth. If needed, repeat treatments at 21-day intervals for multiple or re-germination until target plants are under control. For complete control, apply additional treatments at 21-day intervals for multiple growth stages until target plants are under control. For additional information, refer to the Bayer Reference ID: 2018-NFY266.

1. Partial Control
2. Thorough coverage of foliage is necessary for enhanced results.

## Limit of Warranty and Liability

Monsanto Company (“Company”) warrants that this product conforms to the chemical description on the label. In the event of any discrepancies between the chemical description on the label and the product itself, the chemical description on the label will control. The Company makes no other warranty or representation, expressed or implied, with respect to any product other than that set forth in this warranty. To the extent consistent with applicable law, no other express warranty or implied warranty of merchantability or fitness for any particular purpose is made. The warranty is subject to the conditions and limitations stated herein.

Buyer and all users shall use this product only for the purposes and in accordance with the complete directions for use label (“Directions”) and shall promptly notify this Company of any claims whether based in contract, negligence, strict liability, or otherwise.

To the extent consistent with applicable law, Buyer and all users are responsible for all loss, injury, or damage from use or handling which results from conditions beyond the control of this Company, including, but not limited to, incompatibility with products other than those set forth in the Directions, application to or contact with desirable vegetation, crop injury or failure of this product to control weed biotypes which develop resistance to glyphosate, unusual weather, weather conditions which are outside the range considered normal at the application site and for the time period when the product is applied, as well as weather conditions which are outside the application ranges set forth in the Directions, use and/or application in any manner not explicitly set forth in or inconsistent with the Directions, moisture conditions outside the moisture range specified in the Directions, or the presence of products other than those set forth in the Directions in or on the soil, crop or treated vegetation.

This Company does not warrant any product reformulated or repackaged from this product except in accordance with this Company’s stewardship requirements and with express written permission from this Company.

For in-crop (over-the-top) uses on Roundup Ready crops, crop safety and weed control performance are not warranted by Monsanto when this product is used in conjunction with “brown bag” or “bin run” seed saved from previous year’s production and replanted.

To the extent consistent with applicable law, the exclusive remedy of the user or buyer, and the limit of the liability of this Company or any other seller, for any and all losses, injuries or damages arising out of the use or handling of this product (including claims based in contract, negligence, strict liability, or otherwise) shall be the purchase price paid by the user or buyer for the quantity of this product involved, or, at the election of this Company or any other seller, the replacement of such quantity, or, if accepted by the user or buyer, the replacement of such quantity or such credits as may be agreed upon in writing by the user or buyer and the Company. In no case shall the Company or any other seller be liable for any incidental, consequential, or other damages.

Upon opening and using this product, buyer and all users are deemed to have accepted the terms of this LIMIT OF WARRANTY AND LIABILITY which may not be varied by any verbal or written agreement. If terms are not acceptable, return at once unopened.
