2,4-D LV 6
LOW VOLATILE HERBICIDE
ACTIVE INGREDIENT: 2-ethylhexyl ester of 2,4-dichlorophenoxyacetic acid* ........................................ 86.5%
OTHER INGREDIENT** ............................................................. 13.5%
TOTAL ................................................................. 100.0%
*Equivalent to 57.4% of 2,4-dichlorophenoxyacetic acid or 5.5 lb./gal. leucon specific by AOAC method.
**Contains petroleum distillates.

KEEP OUT OF REACH OF CHILDREN
CAUTION
SEE INSIDE BOOKLET FOR ADDITIONAL PRECAUTIONARY STATEMENTS.

FIRST AID
IF SWALLOWED: Immediately call a poison control center or doctor. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.
IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.
IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

NOTE TO PHYSICIAN
May cause chemical pneumonitis if aspirated. If lavage is performed, suggest endotracheal and/or esophagoscopy.

EPA REG. NO. 42750-25-5905 NET CONTENTS: EPA EST. NO. 42750-MO-1 FOR CHEMICAL, SPILL, LEAK, FIRE, OR EXPOSURE, CALL CHEMTRAC (800) 424-9300

MANUFACTURED FOR:
HELENA CHEMICAL COMPANY
225 SCHILLING BOULEVARD, SUITE 300
COLLIERVILLE, TN 38017

Before buying or using this product, read "Conditions of Sale and Warranty" elsewhere on this label. If terms are not acceptable, return unopened package at once to seller for full refund of purchase price paid. Otherwise, use by the buyer or any other constitutes acceptance of the terms Conditions of Sale and Warranty.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Harmful if swallowed or absorbed through skin. Avoid contact with skin, eyes, or clothing.

PERSONAL PROTECTIVE EQUIPMENT
Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks
- Protective eyewear and
- Chemical-resistant apron when cleaning equipment, mixing, or loading.

If this container contains over 1 gallon and less than 5 gallons, mixers and loaders who do not use a mechanical system (probe and pump) to transfer the contents of this container must wear coveralls or a chemical-resistant apron in addition to the other required PPE. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. After each day of use, clothing or PPE must not be reused until it has been cleaned.

Engineering Controls Statements
If this container contains 5 gallons or more in capacity, do not open pour product from this container. A mechanical system (such as a probe and pump or siphon) must be used for transferring the contents of this container. If the contents of a non-refillable pesticide container are emplaced, the probe must be rinsed before removal. If the mechanical system is used in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4)], the handle PPE requirements may be reduced or modified as specified in the WPS. When handlers use enclosed cabs or enclosed in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d)(4)-6], the handle PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS
Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This product is toxic to aquatic invertebrates. Drift or runoff may adversely affect aquatic invertebrates and nontarget plants. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Most cases of groundwater contamination involving phenoxy herbicides such as 2,4-D have been associated with mixing/loading and disposal sites. Caution should be exercised when handling 2,4-D pesticides at such sites to prevent contamination of groundwater supplies. Use of closed systems for mixing or transferring this pesticide will reduce the probability of spills. Placement of the mixing/loading equipment on an impervious pad to contain spills will help prevent groundwater contamination.

PHYSICAL AND CHEMICAL HAZARDS
Do not use or store near heat or open flame.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation. Do not apply this product through any type of irrigation system.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains provisions for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water includes:
- Coveralls
- Waterproof gloves
- Shoes plus socks and
- Protective eyewear

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR, Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Do not allow people (other than applicator) or pets on treatment area during application. Do not enter treatment areas until spray dries.

STORAGE AND DISPOSAL
STORAGE: Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited. Do not store this product near fertilizers, seeds, insecticides, or fungicides. Do not store near heat or open flame. Recluse all partially used containers by thoroughly tightening screw cap. Absorb any spill with a suitable clay absorbent and dispose of as indicated under "Pesticide Disposal." For safety and prevention of unauthorized use, all pesticides should be stored in locked facilities.

To prevent accidental misuse, different pesticides should be stored in separate areas with enough distance between to provide clear identification. Opened, partially used pesticides should be stored in original labeled containers when possible. When transfer to another container is necessary because of leakages or damage, carefully mark and identify contents of the new container.

PESTICIDE DISPOSAL:
Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions, contact your state Pesticide or Environmental Control Agency or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL:
METAL CONTAINERS: Triple rinse (or equivalent), adding rinse to spray tank. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state or local authorities.

PLASTIC CONTAINERS: Triple rinse (or equivalent), adding rinse to spray tank. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

REFILLABLE CONTAINERS: If this container has been designated by the supplier as refillable, return empty container to the place of purchase.

Small grains (barley, oats, wheat, rye), not underseeded with a legume: See table for recommended use rates. Spray when seeds are small after grain begins filling but before boot stage (usually 4 to 8 inches tall). Do not apply before the tiller stage nor from early boot through milk stage. To control large weeds that will interfere with harvest or to suppress perennial weeds, preharvest treatment can be applied when the grain is in the dough stage. Best results will be obtained when soil moisture is adequate for plant growth and weeds are growing well.

Spring Planted Oats: Use 1/3 pint per acre in sufficient water to give good coverage. Apply after the fully tilled stage, except during the boot to dough stage.

Fall Planted Oats: Apply 1/6 to 1/3 pints per acre after full tillering but before early boot stage. Some difficult weeds may require the higher rates of 1/6 to 1/3 pints per acre for maximum control, but injury may result. Do not spray during or immediately following cold weather.

Wheat and Barley: Control of Wild Garlic and Wild Onion. For improved control of difficult weeds including Wild Garlic and Wild Onion, apply 1/3 to 1/2 pints of product per acre. Since these rates may injure the crop, do not use unless possible crop damage is acceptable. For the higher rates on spring wheat and barley, consult your local State Agricultural Experiment Station or Extension Service Weed Specialist for recommendations or suggestions to fit local conditions.

Control of Wild Garlic in Grain Stubble Fields: Following the harvest of small grains, Wild Garlic often produces new fall growth. This should be sprayed with 1/3 to 1/2 pints per acre. This is a useful practice as one part of a Wild Garlic control program. Do not spray for 14 days following applications. Do not plant any crop for three months after treatment.

Corn: See table for recommended use rates.

Pre-emergent: Apply product to emerged weeds from 3 to 5 days after planting but before corn emerges. Do not use on very light, sandy soils. Use the higher rates on heavy soils. Plant corn as deep as practical. Product will not control weeds which have not emerged.

Post-emergent: Best results are usually obtained when weeds are small and com is 4 to 16 inches tall. When com is over 6 inches tall, use drop nozzles to keep spray off foliage as much as possible. Do not apply from老乡ing to dough stage. If com is growing rapidly and temperature and soil moisture is high, use 1/3 pint per acre to rate control possibility of crop damage. Delay cultivation for 8 to 10 days to prevent stalk breakage due to temporary brittleness caused by 2,4-D. Application rates of up to 25 pint per acre may be used to control some hard to control weeds. However, the possibility of injury to the com is increased.

Do not use with atrazine, oil or other adjuvants. Since the tolerance to 2,4-D of individual hybrids varies, consult your seed supplier, local Extension Service, Agricultural Experimental Station, or University Weed Specialist information.

Preharvest: After the hard dough or denting stage, apply 2 to 3/8 pints per acre of product per acre by air or ground equipment to suppress perennial weeds, decrease weed seed production, and control tall weeds such as Bindweed, Cocklebur, Dogbane, Jimsonweed, Ragweed, Sunflower, Velvetleaf, and vines that interfere with harvesting. Do not forage or feed com fodder to livestock for 7 days following application.

Postharvest: Following the harvest of corn, Wild Garlic often produces new fall growth. This should be sprayed with 1/3 to 1/2 pints per acre. This is a useful as one part of a Wild Garlic control program. Do not forage for 7 days following application. Do not plant any crop for three months after treatment.

Sorghum (Milo): See table for recommended rate. Apply to sorghum when crop is 4 to 12 inches high with secondary rosettes well established. Use drop nozzles when crop is over 10 inches high. Do not apply from flowering to dough stage. Rates of up to 1/2 pint per acre may be used to control some hard to control weeds. However, the chance of crop injury is increased with the higher rates. Do not use with oils. Use lower rates if conditions of high temperature and high soil moisture exist.

**Soil Types**

**Wild band treatment is used, base the dosage rate on the actual arey sprayed.**

**Soybeans (Preplant Only):** For use in Crop Residue Management Systems: Apply 4/1 to 2,013 lbs per acre or not less than 10 days prior to planting soybeans or 2-6 to 1/3 pins per acre not less than 30 days prior to planting. Apply to postemergent weeds when small, actively growing, and free of stress caused by extremes in climatic conditions, diseases, or insect damage. The response of individual weed species is variable. Consult your local county agent or state Agricultural Extension Service or crop consultant for advice. See the higher rate on larger weeds and when perennial weeds are present. (See WEEDS CONTROLLED below.)

Apply using air or ground equipment in sufficient soilage to obtain adequate coverage of weeds. Use 2 or more gallons of water per acre in aerial application and 10 or more gallons of water per acre in ground equipment.

**WEEDS CONTROLLED:**

Alfalfa* Saltbush, saltgrass
Boltonia* Saltmeadow cordgrass
California goldenrod* Salsify, goosefoot
Crotalaria, common & tough Senna, cassia
Cucumber, red* Sunflower, annual
Dandelion Annual
Dock, curly* Volunteer
Evening primrose, cutleaf Thistle, Canada
Garlic, wild* Tumbleweed, annual

After applying, plant soybeans seeded as deep as practical or at least 1/2 to 2 inches deep. Adjust the planter press wheel, if necessary, to ensure that planted seed is completely covered.

If desired, this product may be applied preplant to soybeans in tank mixtures with other herbicides such as POAS®, POAS® PLUS, ROUNDUP®, ROUNDUP D-PALS®, HONCHO®, GRAMOXONE®, EXTRA, PROWLD® DG, PROWLD® 3.3 EC, PURSUIT® PLUS, SCEPTOR® 70 DG, SQUADRON® and others that are registered for preplant soybean use.

Compatible crop oil concentrates, agricultural surfactant, and fluid fertilizers approved for use on growing crops may increase the herbicidal effectiveness of 2,4-D on certain weeds and may be added to the spray tank. Read and follow all directions and precautions on this label and on all labels of adjuvants or fertilizers mixed with this product.

**Note:** Unsatisfactory injury to soybeans planted in treated fields may occur. Whether or not soybean injury occurs and the extent of the injury will depend on weather and agronomic factors such as the amount of weed vegetation and previous crop residue present. Injury is more likely under cool rainy conditions and where there is less weed vegetation and crop residue present.

Not registered for use in California.

**RESTRICTIONS AND LIMITATIONS FOR USE IN SOYBEANS:**

Do not apply this product prior to planting soybeans if you are not prepared to accept the results of soybean injury including possible loss of stand and yield. Do not use on low growing crops such as grasses, clover, and pasture. Do not apply this product when weather conditions such as temperature, air inversions, or wind favor drift from treated areas to susceptible plants.

Do not mow or cultivate weeds prior to treating with this product as poor control may result.

Do not feed treated hay, forage, or fodder or graze treated soybeans to livestock. Do not feed or graze treated cover crops to livestock.

Only one application of this product may be made prior to planting soybeans per growing season.

Do not replant fields treated with this product in the same growing season with crops other than those labeled for 2, 4-D use.

**Ornamental Turf:** Use 2/3 to 2/3 pins of product in enough water to give good coverage to one acre on established stands of perennial grasses, depending on type of weeds and stage of growth. Do not use on creeping grasases such as Bent except for spot spraying. Newly seeded turf should not be treated until after the second mowing and the lower dosage rate should be used. **Notes for all Turf Sites (excluding sod farms):** The maximum number of broadcast applications per treatment site is 2 per year.

**Grass Seed Crops:** Apply 2/3 to 2/3 pins of product per acre in the spring or fall to control broadleaf weeds in grass being grown for seed. Do not apply from early boot to milk stage. Spray seeding grass only after the five leaf stage, using 1/2 to 3/2 pins per acre to control small seedling weeds. After the grass is well established, higher rates of up to 20% to 2/3 pins per acre or a total area of 1/2 inch to 1/2 inch of soil is recommended. For best results, apply when soil moisture is adequate for good growth. Do not use on Bent unless injury can be tolerated. Do not graze dairy cattle within 7 days of application. Do not apply this product within 30 days of cutting grass for hay. Remove meat animals from treated areas 3 days prior to slaughter.

**Fallow Land:** On established perennial species such as Canada thistle and Field bindweed, apply up to 4 quarts of product per acre. For annual broadleaf weeds, apply 1-3/10 to 2-3/10 pins per acre. Do not plant any crop 3 months after treatment or until 2, 4-D has disappeared from soil.

**Established Pasture and Rangeland:** Use 2/3 to 2/3 pins of product in sufficient water to give good coverage to one acre depending on type of weeds and stage of growth. Use only on established stands of perennial grasses. Do apply this product within 30 days of cutting grass for hay. Remove meat animals from treated areas 3 days prior to slaughter.

**Wild Garlic and Wild Onion Control:** Apply 2/3 to 4 pins of product per acre making three applications, fall-spring-fall or spring-fall-spring, starting in the late fall or early spring. Do NOT graze daily animals nor cut for hay within 7 days of application.

**General Weed Control:** (Airfield, Roadsides, Vacant Lots, Fence Rows, Industrial Sites and similar areas): Use 1/10 to 1/3 pins of product. Do not apply during rain or until 7 days after application. Do not use on herbaceous ground covers or creeping grasses such as Bent. Legumes will usually be damaged or killed. Deep-rooted perennial species may require repeat applications. Do not use on freshly seeded turf until grass is well established. Delay reseeding for 30 days.

**Woody Plant Control:** To control woody plants susceptible to 2,4-D, such as Alder, Buckbrush, Elderberry, Sumac, and Willow on non-crop areas, use 1-3/10 to 2 quarts, product per acre in阴阳/100 gallons of water. Wet all parts of the plants thoroughly, including stems and foliage, to the point of runoff. Higher volumes of up to 400 gallons per acre are necessary where the brush is very dense and over 6 to 8 feet high. Applications are more effective when made on actively growing plants. Treatment should not be made during time of severe drought or in early fall when leaves lose their green color. Hard-to-control species may require re-treatment next season.

**USES IN FOREST MANAGEMENT:**

**Cutover Release:** For control of cutover, apply 2/3 to 4 quarts of product per acre in 4 to 25 quarts of water, and apply as a fog spray. Treat when 3/4 of the brush foliage has attained full size leaves and before new conifer growth reaches 2” in length. This is usually between early May and mid-June. Adjust treatment date depending on stage of growth and brush species. This may cause leader defoliation on exposed trees, but should not cause damage to the trees during the second year after spraying.

To control susceptible brush species such as Ceanothus spp., Chihuahuan Madrone, Manzanita, Oak and Tannock and to eradicate Douglas fir, Hemlock, Sitka spruce or Grand fir, apply up to 2 quarts per acre before new growth on Douglas fir is 2” long. To control Manzanita and Ceanothus in Ponderosa pine, apply up to 2 1/2 quarts per acre before pine growth begins in spring. To increase performance, add 2 to 4 quarts of diesel fuel, oil, kerosene, or a suitable approved agricultural surfactant at recommended label rate.

After Northern conifers, Jack pine, Red Pine, Black spruce, and White spruce cease growth and "harden off" in late summer, a spray of 1 to 2 quarts of product in 8 to 25 gallons of water per acre may be applied by air to control certain hardy species such as Alder, Aspen, Birch, Hazel and Willow. Since these treatments may cause occasional conifer injury, do not use if injury cannot be tolerated. Consult your regional or extension forester or state herbicide specialist for recommendations for local conditions.

**Tree Injection (Pine Release):** To control hardwoods, such as Oaks, Hickory, Maple, Pecan, Elm, Samsen, Sweetgum, and Hawthorn in forest and noncrop areas. Apply undiluted product in a concentrates tree injector calibrated to apply .71 percent injection. Concentrate is 2 1/2 parts, and dilute product is 1 part and give 4 pins of oil. Do not use in dikes, slurry sprays, or with sprayer. Use 1/10 to 2/3 pins of product per acre in sufficient diesel, fuel oil or kerosene for good coverage. Application may be made by ground or air and should be made after conifer bud break.

**Pine Only:** Make application white pine buds are still dormant. Apply 1-3/10 quarts of product per acre in sufficient water for good coverage by air or ground equipment. Do not use this application unless some pine injury is acceptable. Use of diesel, kerosene, or other oil, or addition of surfactants to spray mix may cause unacceptable pine injury. Herbaceous Weed Control: To control over-wintering susceptible weeds such as False dandelion, Saltbush, Weeds, Grass, Hawkweed, P tumex, and Tanney ragwort, apply 2/3 to 2 quarts of product per acre in sufficient water for good coverage. Make application at rates and timing indicated above if pines are present. For control of hazel brush and similar species in the Lake States area, apply 1-3/10 quarts of product per acre in 8 to 25 gallons of water, when new shoot growth of Hazel is complete.

**Site Preparation: (As Dormant Spray):** For control of Alder prior to planting seedlings, apply 1-3/10 to 2-2/3 quarts of product per acre in diesel, fuel oil, or similar oil before foliage is 1/2 inch long. Application may be made by air or ground. (As Fog Spray): For control of Alder prior to planting seedings, apply 1-3/10 to 2-2/3 quarts of product per acre in 8 to 25 gallons of water, after most Alder leaves are full size. To increase penetration, 2 to 4 quarts of product per acre, diesel, fuel oil, kerosene, or a suitable
approved agriculture surfactant at recommended label rates may be added to the spray mixture.

CONDITIONS OF SALE WARRANTY

The DIRECTIONS FOR USE of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and should be followed carefully. However, it is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness, or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of ALBAUGH, INC. or the Seller. All such risks shall be assumed by the Buyer.

ALBAUGH, INC. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purpose referred to in the DIRECTIONS FOR USE subject to the inherent risks referred to above. ALBAUGH, INC. MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR ANY PARTICULAR PURPOSE OR OF MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY. THIS WARRANTY DOES NOT EXTEND TO, AND THE BUYER SHALL BE SOLELY RESPONSIBLE FOR, ANY AND ALL LOSS OR DAMAGE WHICH RESULTS FROM THE USE OF THIS PRODUCT IN ANY MANNER WHICH IS INCONSISTENT WITH THE LABEL DIRECTIONS, WARNINGS OR CAUTIONS.

BUYER’S EXCLUSIVE REMEDY AND MANUFACTURER’S OR SELLER’S EXCLUSIVE LIABILITY FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES, OR INJURIES RESULTING FROM THE USE OF HANDLING OF THIS PRODUCT, WHETHER OR NOT BASED IN CONTRACT, NEGLIGENCE, STRICT LIABILITY IN TORT OR OTHERWISE, SHALL BE LIMITED, AT THE MANUFACTURER’S OPTION, TO REPLACEMENT OF OR THE REPAYMENT OF THE PURCHASE PRICE FOR THE QUANTITY OF PRODUCT WITH RESPECT TO WHICH DAMAGES ARE CLAIMED. When Buyer suffers losses or damages resulting from use or handling of this product (including claims based on contract, negligence, strict liability, or other legal theories), Buyer must promptly notify Seller in writing of any claims to be eligible to receive either remedy stated above. IN NO CASE SHALL ALBAUGH, INC. OR THE SELLER BE LIABLE FOR CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT. ALBAUGH, INC. and the Seller offer this product, and the Buyer accepts it, subject to the foregoing Conditions of Sale and Warranty, which may be varied only by agreement in writing signed by a duly authorized representative of ALBAUGH, INC. No employee or agent of ALBAUGH, INC. or the Seller is authorized to vary or exceed the terms of this Warranty in any other manner.

REV 12/97
