DELTAGARD G Insecticide Granule is a granular formulation. Apply with a fertilizer spreader or Broadcast Spreader as a broadcast application with suitable and calibrated application equipment. The application rate depends on the target pest:

- **Ants, Boxelder Bugs, Brown Dog Ticks, and Earwigs:** 1 to 2 teaspoons per 1,000 square feet may be used as a broadcast application. Do not apply more than once per week. For ants, the purpose of such applications is to kill workers or winged ants that have entered the treatment area. The application is made to nests or mounds with water. In addition to treating ant nests or mounds, entry points of buildings and the soil surface along the perimeter of the building should be treated. Application at dusk when wasps are not active is recommended. To control SOD WEBWORMS, the application rate is 1 to 2 teaspoons per 1,000 square feet. Water must be applied to thoroughly moisten treated area and dissolve the insecticide granule. Do not apply on or near flower, shrub, ornamental plant beds and interior plantscapes. Application to golf courses or sod farms is not allowed.

- **Ants:** The application rate is 1 to 2 teaspoons per 1,000 square feet. Water must be applied to thoroughly moisten treated area and dissolve the insecticide granule. Do not apply on or near flower, shrub, ornamental plant beds and interior plantscapes. Application to golf courses or sod farms is not allowed.

- **FIRE ANTS:** The application rate is 1 to 2 teaspoons per 1,000 square feet. Water must be applied to thoroughly moisten treated area and dissolve the insecticide granule. Do not apply on or near flower, shrub, ornamental plant beds and interior plantscapes. Application to golf courses or sod farms is not allowed.

- **Mole crickets:** 2 to 3 pounds per acre is used as a broadcast application with water dispersible carrier. Treat as directed. Use with care when applying in areas adjacent to any body of water. This product is extremely toxic to fish and aquatic invertebrates. Use with care when applying in areas adjacent to any body of water. Application is prohibited directly into sewers or drains, or to any area like a gutter where drainage to sewers, storm drains, water bodies, or aquatic habitat can occur. Do not allow the product to enter any drain during or after application. Do not contaminate ornamental fish ponds.

- **Insect Dosage of Product.** The dosage is 1 to 2 teaspoons per 1,000 square feet when pests first appear in late spring (May-June) and continue until late summer (August-September) into the fall. Follow the application rate according to the table provided.

- **Environmental Hazards:** This product is extremely toxic to fish and aquatic invertebrates. Use with care when applying in areas adjacent to any body of water. Application is prohibited directly into sewers or drains, or to any area like a gutter where drainage to sewers, storm drains, water bodies, or aquatic habitat can occur. Do not allow the product to enter any drain during or after application. Do not contaminate ornamental fish ponds.

- **Directions for Use:** Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. Attend to the table for the dosage rate of application. The product container or label must be with you when calling a poison control center or doctor or going for treatments.
