REGISTRATION FOR SPECIAL LOCAL NEED
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

Imidan® 70-W
EPA Reg. No. 10163-169
EPA SLN No. WA-030031

DIRECTIONS FOR USE
• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• Follow all applicable directions, restrictions, Worker Protection Standard requirements and precautions on the EPA registered label.
• This labeling must be in the possession of the user at the time of application.

CROP
Potato

PESTS CONTROLLED
Loopers

USE RATE
1 1/3 - 2 1/2 lbs. Imidan 70-W (1 – 1.75 lbs ai) per acre

METHOD OF APPLICATION
Use higher rate to control small, actively feeding looper larvae. Apply by ground or air in a minimum of 2 gallons water per acre. Obtain uniform foliar coverage for best results. As needed, repeat applications at 10 day intervals following an application of 1 1/3 lb Imidan 70-W (1 lb ai) per acre, but no sooner than 21 days following an application of greater than 1 1/3 lb Imidan 70-W (1 lb ai) per acre.

RESTRICTIONS / PRECAUTIONS
• Do not apply more than 6 2/3 pounds Imidan 70-W (4.67 lbs ai) per acre per season.
• Do not apply more than two times when using the maximum use rate of 2 1/2 lbs Imidan 70-W (1.75 lbs ai) per acre per season.
• Do not harvest within 7 days following an application of 1 1/3 lb Imidan 70-W (1 lb ai) per acre. Do not harvest with 21 days following an application greater than 1 1/3 lb Imidan 70-W (1 lb ai) per acre.
• Potatoes must be harvested mechanically.
• This product may be applied through irrigation systems. Refer to the EPA federally registered label for chemigation directions.

WSDA Chemigation Guidance:
• Application off-site is prohibited. The chemigation application must be continuously observed whenever sensitive areas as defined in WAC 16-202-1002(44) (including but not limited to schools, parks, dwellings, occupied buildings or structures, public roadways, and waters of the state) are at risk of being exposed to drift, runoff, or overspray. In order to minimize the potential for application off-site, WSDA recommends that the product only be applied through low pressure irrigation systems (defined as 2 to 35 pounds/square inch measured at the nozzle) with a nozzle release height no higher than 3 feet above the target crop, and that end guns be disabled throughout the application.
• An inspection port or a direct access point is required, and it must be positioned immediately upstream of the irrigation mainline check valve and be of sufficient size to allow visual and manual inspection of the check valve and low pressure drain. The inspection port or access point must have a minimum diameter of four inches, unless an alternative access system is approved by WSDA (WAC 16-202-1012[1]).

• The chemigation application tank cannot be placed within 20 feet of the wellhead or other sensitive areas. Mixing or loading activities cannot occur within 20 feet of the wellhead or other sensitive areas (WAC 16-202-1008[1]).

• WSDA Chemigation Rules (WAC 16-202-1001 through WAC 16-202-1024), and information on USEPA Authorized Alternative Chemigation Safety Equipment, Distribution Uniformity and other chemigation topics are available on the WSDA website (http://agr.wa.gov/PestFert/ChemFert/default.aspx).

• Severe bee kills have resulted from insecticides that were applied to potatoes, but drifted onto blooming seed crops. Do not allow this product to drift onto blooming seed crops.

• This pesticide is extremely toxic to fish. IMIDAN 70-W should not be used under this SLN label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Endangered Species Program web site at http://agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx, or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.

• To protect endangered aquatic organisms, use one of the following options: (1) Apply only when there is sustained wind away from fish-bearing waters, or (2) Leave an untreated buffer (25 feet for ground applications, 50 feet for chemigation applications, 150 feet for aerial applications) between treatment area and fish-bearing waters.

WSDA CONTAINER DISPOSAL GUIDANCE

• Completely empty the contents of the pesticide container into application equipment, and apply to a labeled crop or site. The empty container may be disposed of in a sanitary landfill. Burning is not a legal method of container disposal in Washington.

This label for Imidan 70-W expires and must not be distributed or used in accordance with this SLN registration after December 31, 2014.
