ATTENTION: VENTED CAP MAY LEAK WHEN TIPPED. WILL DAMAGE MATERIALS UPON CONTACT. TRANSPORT IN BLOCKED, UPRIGHT POSITION IN TRUNK ONLY. ENSURE CAP IS TIGHT BEFORE LEAVING STORE. KEEP BOTTLE UPRIGHT AND TIGHTLY CAPPED AT ALL TIMES.

ACTIVE INGREDIENT:
SODIUM HYPOCHLORITE: 10.0%
OTHER INGREDIENTS: 90.0%
TOTAL: 100.0%

CHLORINATING LIQUID FOR POOLS & SPAS

KEEP OUT OF REACH OF CHILDREN
DANGER

FIRST AID: Call a poison control center or doctor immediately for treatment advice. Have the product container or label with you when you call. IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. IF ON SKIN: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. IF SWALLOWED: Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person. NOTE TO PHYSICIAN: Possible mucosal damage may contraindicate the use of gastric lavage. See back panel for additional precautions.

NET CONTENTS 128 FL OZ (1 GALLON) 3.79 L

ATTENTION: VENTED CAP MAY LEAK WHEN TIPPED.

WILL DAMAGE MATERIALS UPON CONTACT.
TRANSPORT IN BLOCKED, UPRIGHT POSITION IN TRUNK ONLY.
ENSURE CAP IS TIGHT BEFORE LEAVING STORE.
KEEP BOTTLE UPRIGHT AND TIGHTLY CAPPED AT ALL TIMES.

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling.
NOTE: This product degrades with age. Use a chlorine test kit and increase dosage, as necessary, to obtain the required level of available chlorine.

SWIMMING POOL WATER DISINFECTION:
- For a new pool or spring start-up, superchlorinate with 60 to 126 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Adjust and maintain pool water pH to between 7.2 and 7.6.
- Adjust and maintain the alkalinity of the pool to between 50 to 100 ppm.
- To maintain the pool, add manually or by a feeder device 13 oz. of this product for each 10,000 gallons of water to yield an available chlorine residual between 0.5 to 1.6 ppm by weight. Stabilized pools should maintain a residual of 1.0 to 1.5 ppm available chlorine. Test the pH, available chlorine residual and alkalinity of the water frequently with appropriate test kits. Frequency of water treatment will depend upon temperature and number of swimmers.
- Every 7 days, or as necessary, superchlorinate the pool with 64 to 128 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Do not re-enter pool until the chlorine residual is between 1.0 to 2.0 ppm.
- At the end of the swimming pool season or when water is to be drained from the pool, chlorine must be allowed to dissipate from treated pool water before discharge. Do not chlorinate the pool within 24 hours prior to discharge.

WINTERIZING POOLS:
- While water is still clear & clean, add 4 oz. of product per 1000 gallons, while filter is running, to obtain a 3 ppm available chlorine residual, as determined by a suitable test kit. Cover pool, prepare heater, filter and heater components for winter by following manufacturers’ instructions.

SPAS/SAUNAS/TUBS:
- Apply 7 oz. of product per 1000 gallons of water to obtain a free available chlorine concentration of 5 ppm, as determined by a suitable test kit. Adjust and maintain pool water pH to between 7.2 and 7.6. Some oils, tannins, fragrance, cleaners, etc. may cause foaming or cloudy water as well as reduce the efficiency of the product.
- To maintain the water, apply 7 oz. of product per 1000 gallons of water per day to maintain a chlorine concentration of 5 ppm.
- After each use, shock treat with 10 oz. of this product per 500 gallons of water to control odor and algae.
- During extended periods of disuse, add 1 oz. of product daily per 1000 gallons of water to maintain a 3 ppm chlorine concentration.

HYDROTHERAPY TANKS:
- Add 1.8 oz. of this product per 1000 gallons of water to obtain a chlorine residual of 1 ppm. As determined by a suitable test kit. Pool should not be entered until the chlorine residual is below 5 ppm. Adjust and maintain the water pH to between 7.2 and 7.6. Operate pool filter continuously. Drain pool weekly, and clean before refilling.

PRECAUTIONARY STATEMENTS
Hazards to humans and domestic animals

DANGER: Corrosive, may cause severe skin and eye irritation or chemical burns to broken skin. Causes eye damage. Wear safety glasses or goggles and rubber gloves when handling this product. Wash after handling. Avoid breathing vapors. Vacuum poorly ventilated areas as soon as possible. Do not return until strong odors have dissipated.

Environmental Hazards
This product is toxic to fish and aquatic organisms. Do not discharge into lakes, streams, ponds, estuaries, oceans or public waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

Physical and Chemical Hazards
Strong oxidizer. Flush drains before and after use. Do not use or mix with other household chemicals, such as toilet bowl cleaners, rust removers, acid or ammonia containing products. To do so will release hazardous gases. Prolonged contact with metal may cause pitting or dissolution.

STORAGE AND DISPOSAL
Do not contaminate food or feed by storage, disposal or cleaning of equipment. Store this product in a cool, dry area away from direct sunlight and heat to avoid deterioration. In case of spill, scatter area with large quantities of water. Product rinsates that cannot be used should be diluted with water before disposal in a sanitary sewer. CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container. Offer for recycling if available or place in trash collection.

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling.
NOTE: This product degrades with age. Use a chlorine test kit and increase dosage, as necessary, to obtain the required level of available chlorine.

SWIMMING POOL WATER DISINFECTION:
- For a new pool or spring start-up, use 64 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Adjust and maintain pool water pH to between 7.2 to 7.4. Adjust and maintain free alkalinity of the pool to between 50 to 100 ppm.
- To maintain the pool, add 4 oz. or less of this product for each 10,000 gallons of water to yield an available chlorine residual between 0.5 to 1.0 ppm by weight. Stabilized pools should maintain a residual of 1.0 to 1.5 ppm available chlorine.
- Test the pH, available chlorine residual and alkalinity of the water frequently with appropriate test kits. Frequency of water treatment will depend on pool temperatures and number of swimmers.
- Evaporative losses (1 oz. per 3,000 gallons per week) or water use (1 oz. per 1,000 gallons per week) may be necessary, depending on swimming pool average size and number of swimmers.
- At the end of the swimming season or when water is to be drained from the pool, chlorine must be allowed to dissipate from treated pool water before discharge. Do not chlorinate the pool within 24 hours prior to discharge.

WINTERIZING POOLS:
- While water is still clear & clean, apply 4 oz. of product per 1000 gallons, while filter is running. To obtain a 2 ppm available chlorine residual, as determined by a suitable test kit. Cover pool, prepare heater, filter and heater component for winter by following manufacturer’s instructions.

SPAS/HOT-TUBS:
- Apply 7 oz. of product per 1000 gallons of water to allow a free available chlorine concentration of 6 ppm, as determined by a suitable test kit. Adjust and maintain pool water pH in between 7.2 and 7.4. Some oils, connecter, fragrances, cleaners, etc. may cause foaminess or cloudy water as well as reduce the efficiency of the product.
- To maintain the water, apply 7 oz. of product per 1000 gallons of water over the surface to maintain a chlorine concentration of 6 ppm.
- After each use, add 10 oz. or this product per 1000 gallons of water to control odor and algae.

HYDROTHERAPY TANK:
- Add 1.5 oz. of this product per 1000 gallons of water to obtain a chlorine residual of 1 ppm, as determined by a suitable chlorine test kit. Pool should be aerated until the chlorine residual is below 2 ppm. Adjust and maintain the water pH to between 7.2 and 7.6. Operate pool filter continuously. Drain pool weekly, and clean before refilling.
