Me-Too-Lachlor™ II
Herbicide

For weed control in Field corn, Sweet corn and Popcorn.

ACTIVE INGREDIENT:
Metolachlor: 2-chloro-N-(2-ethyl-6-methylphenyl)-N-(2-methoxy-1-methylethyl) acetamide ............ 84.4%
OTHER INGREDIENTS: .......................................... 15.6%
TOTAL: ............................................................ 100.0%

This product contains 7.8 pounds of active ingredient per gallon.

KEEP OUT OF REACH OF CHILDREN
See FIRST AID Below

EPA Reg. No. 19713-549 Net Content: 2.5 Gals. (9.46 L)
EPA Est. No. 19713-MS-1

FIRST AID

IF INHALED:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.

IF ON SKIN OR CLOTHING:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.

IF IN EYES:
• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

IF SWALLOWED:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything by mouth to an unconscious or convulsing person.

Call a poison control center or doctor for treatment advice. Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For information on this pesticide product (including health concerns, medical emergencies or pesticide incidents), call the National Pesticide Information Center at 1-800-858-7378.

FOR CHEMICAL SPILL, LEAK, FIRE OR EXPOSURE CALL TOLL FREE 1-800-424-9300.

PRECAUTIONARY STATEMENTS (Cont.)
Applicators and other handlers must wear:
• Coveralls over short-sleeved shirt and short pants
• Chemical-resistant gloves made of any waterproof material such as barrier laminate or viton
• Chemical-resistant footwear plus socks
• Chemical-resistant headgear for overhead exposure
• Chemical-resistant apron when cleaning equipment

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:
1) Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
2) Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
3) Remove PPE immediately after handling this product.

Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENGINEERING CONTROL STATEMENTS

Mixers and loaders supporting aerial applications are required to use closed systems. The closed system must be used in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4)]. When using the closed system, the PPE requirements for mixers and loaders may be reduced or modified as specified in the WPS.

When handlers use closed systems, enclosed cabs or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

ENVIRONMENTAL HAZARDS

Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of rinsate or equipment washwater.

Groundwater Advisory
This chemical is known to leach through soil into groundwater under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Surface Water Advisory
Metolachlor can contaminate surface water through ground spray drift. Under some conditions, metolachlor may also have a high potential for runoff into surface water (primarily via dissolution in runoff water), for several months post-application. These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas, areas over-laying extremely shallow groundwater, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips and areas over-laying tile drainage systems that drain to surface water.

ME-TOO-LACHLOR II Page 1 of 10
Mixing/Loading Instructions

Care must be taken when using this product to prevent back-siphoning into wells, spills or improper disposal of excess pesticide, spray mixtures or rinsates.

Check-valves or anti-siphoning devices must be used on all mixing and/or irrigation equipment.

This product may not be mixed or loaded within 50 feet of Perennial or intermittent streams and rivers, natural or impounded lakes and reservoirs. This product may not be mixed/loaded or used within 50 feet of all wells, including abandoned wells, drainage wells and sink holes. Operations that involve mixing, loading, rinsing or washing of this product into or from pesticide handling or application equipment or containers within 50 feet of any well are prohibited unless conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be positioned on or moved across the pad. Such a pad shall be designed and maintained to contain any product spills or equipment leaks, container or equipment rinse or wash water and rain water that may fall on the pad. Surface water shall not be allowed to either flow over or from the pad, which means the pad must be self-contained. The pad shall be sloped to facilitate material removal. An unroofed pad shall be of sufficient capacity to contain at a minimum 110% of the capacity of the largest pesticide container or application equipment on the pad. A pad that is covered by a roof of sufficient size to completely exclude precipitation from contact with the pad shall have a minimum containment capacity of 100% of the capacity of the largest pesticide container or application equipment on the pad. Containment capacities as described above shall be maintained at all times. The above-specified minimum containment capacities do not apply to vehicles when delivering pesticide shipments to the mixing/loading site.

PRODUCT INFORMATION

Observe all use precautions and limitations on the labels of each product used in tank-mixtures. Tank-mixtures are permitted only in those states where the tank-mix partner is registered.

ME-TOO-LACHLOR II is a herbicide for use as a pre-plant surface-applied, pre-plant incorporated or pre-emergence treatment in water or fluid fertilizer for control of most Annual grasses and certain Broadleaf weeds in Field corn, Sweet corn and Popcorn.

This product is a Group 15 herbicide. Any weed population may contain or develop plants naturally resistant to this product and other Group 15 herbicides. Weed species with acquired resistance to Group 15 may eventually dominate the weed population if Group 15 herbicides are used repeatedly in the same field or in successive years as primary method of control for targeted species. This may result in partial or total loss of control of those species by this product or other Group 15 herbicides.

To delay herbicide resistance, consider:
- Avoiding the consecutive use of this product or other target site of action Group 15 herbicides that have a similar target site of action on the same weed species.
- Using tank-mixtures or pre-mixes with herbicides from different target site of action Groups as long as the involved products are all registered for the same use, have different sites of action and are both effective at the tank-mix or pre-pack rate on the weed(s) of concern.
- Basing herbicide use on a comprehensive IPM program.
- Monitoring treated weed populations for loss of field efficacy.
- Contacting your local extension specialist, certified crop advisors and/or manufacturer for herbicide resistance management and/or integrated weed management recommendations for specific crops and resistant weed biotypes.

MIXING INSTRUCTIONS

This Product Alone: Mix this product with water or fluid fertilizer and apply as a spray. Fill the spray tank one-half to three-quarters full with water or fluid fertilizer, add the proper amount of this product, then add the rest of the water or fluid fertilizer. Provide sufficient agitation during mixing and application to maintain a uniform emulsion.

Tank-Mixes: Fill the spray tank one-fourth full with water and start agitation; add 2,4-D, Atrazine, Banvel®, Linuron, Marksmann®, Prowl®, Simazine or Atrazine + Simazine and allow it to become dispersed; then add this product, then add Gramoxone® Max, Landmaster® BW or Glyphosate if these products are being used; and finally the rest of the water. For tank-mixtures with Atrazine, Banvel, Linuron, Marksmann, Prowl, Simazine or Atrazine + Simazine, fluid fertilizers may replace all or part of the water as carrier, except in the Atrazine post-emergence and the Banvel post-emergence tank-mixes. For tank-mixtures with Atrazine, see additional mixing instructions on the Atrazine label. For each mixture, check compatibility with fluid fertilizer, as described in “APPENDIX A”, before mixing in spray tank. For all tank-mixtures, agitate during mixing and application to maintain a uniform suspension.

See “Special Mixing Instructions” for tank-mixtures with Atrazine or Simazine + Prowl under the appropriate tank-mixure section.

For directions on how to conduct a compatibility test, see “APPENDIX A”.

DIRECTIONS FOR USE

This product is intended for use in weed control in Field corn, Sweet corn and Popcorn.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

DO NOT APPLY THIS PRODUCT BY AIR IN NEW YORK STATE. DO NOT USE OR DISTRIBUTE THIS PRODUCT IN NASSAU AND SUFFOLK COUNTIES.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about Personal Protective Equipment (PPE) and Restricted Entry Interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the Restricted Entry Interval (REI) of 24 hours. Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:
- Coveralls over short-sleeved shirt and short pants
- Chemical-resistant gloves made of any waterproof material such as barrier laminate or viton
- Shoes plus socks

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND USE PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR WEED CONTROL, CROP INJURY OR ILLEGAL RESIDUES.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, as crop injury may result.
1) SOIL TEXTURES AND HERBICIDE RATES
Where rates are based on Coarse, Medium or Fine-textured soils it is understood that soil textural classes are generally categorized as follows:

<table>
<thead>
<tr>
<th>Coarse</th>
<th>Medium</th>
<th>Fine</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sand</td>
<td>Loam</td>
<td>Loam</td>
</tr>
<tr>
<td>Loamy sand</td>
<td>Silt</td>
<td>Fine clay</td>
</tr>
<tr>
<td>Sandy loam</td>
<td>Silt</td>
<td>Clay</td>
</tr>
<tr>
<td></td>
<td>Loam</td>
<td>Fine clay</td>
</tr>
<tr>
<td></td>
<td>Sandy clay</td>
<td>Clay</td>
</tr>
</tbody>
</table>

Within rate ranges in the rate tables and elsewhere on this label, use the lower rate on soils relatively Coarse-textured or low in organic matter. Use the higher rate on soils relatively Fine-textured or high in organic matter.

Note: This product may be applied pre-emergence alone or in combination with tank-mix partners specified on this label following pre-plant incorporated herbicides when used according to their label directions, provided that such use is not prohibited on the respective labels.

Thoroughly clean sprayer or other application device before using. Dispose of cleaning solution in a responsible manner. Do not use a sprayer or applicator contaminated with any other materials. Crop damage or clogging of the application device may result.

2) APPLICATION PROCEDURES
Application Timing
This product alone or in some tank-mixtures with other labeled herbicides may be applied for weed control in Field corn, Sweet corn and Popcorn at various times. Refer to the given crop section of the label directions, provided that such use is not prohibited on the respective labels.

Pre-emergence: For Minimum-tillage or No-tillage systems only, this product alone and some tank-mixtures of this product may be applied up to 45 days before planting. Use only split applications for treatments made 30 to 45 days before planting, with two-thirds the recommended broadcast rate for the crop and soil texture applied initially and the remaining one-third at planting.

Treatments less than 30 days before planting may be made either as a split or a single application. If weeds are present at the time of treatment, apply in a tank-mixture combination with a contact herbicide (for example, Gramoxone Max or Glyphosate). Observe directions for use, use precautions and restrictions on the label of the contact herbicide. To the extent possible, do not move treated soil out of the row or move untreated soil to the surface during planting. Weed control will be diminished.

Pre-plant Surface-Applied: For Minimum-tillage or No-tillage systems only, this product alone and some tank-mixtures of this product may be applied up to 45 days before planting. Use only split applications for treatments made 30 to 45 days before planting, with two-thirds the recommended broadcast rate for the crop and soil texture applied initially and the remaining one-third at planting.

Ground Application: Apply the product alone or in tank-mixtures by ground equipment in a minimum of 10 gals. of spray mixture per acre, unless otherwise specified.

Use sprayers that provide accurate and uniform application. For tank-mixtures of this product with wettable powder or dry flowable formulations, screens and strainers should be no finer than 50 mesh. Rinse sprayer thoroughly with clean water immediately after use.

Calculate the amount of herbicide needed for band treatment by the formula:

\[
\text{band width in inches} \times \text{broadcast rate} \times \text{row width in inches} = \text{amount needed per acre}
\]

Note: For information on applying in lower volumes of carrier, see “LOW CARRIER APPLICATION” in “APPENDIX B.” For application by air or through center pivot systems, see “APPENDICES C” and “D.” “APPENDIX C” includes “Aerial Drift Management” and “Aerial Drift Reduction Advisory Information” sections. For information on impregnating dry fertilizer, see “APPENDIX E.”

</table>

* For control of this weed, apply in the Fall using 1.67 pts. of this product on Medium soils and 2 pts. of this product on Fine soils after harvest of the previous crop but prior to emergence of this weed. A tillage operation may precede application of this product. Do not apply to frozen ground. A Fall and/or Spring tillage may follow application but incorporation depth must not exceed more than 2 to 3 inches. After emergence of this weed, apply this product in tank-mix combination with other herbicides with use directions against this weed. Observe all use precautions and limitations on the labels of each product used in tank-mixtures. Tank-mixtures are permitted only in those states where the tank-mix partner is registered. Observe the specified maximum allowable rate of this product for a crop growing season.

** For control of these weeds, refer to the “Wooly Cupgrass and Wild Proso Millet Control Program” section of this label.

2) WEEDS PARTIALLY CONTROLLED:

<table>
<thead>
<tr>
<th>Common purslane</th>
<th>Hairy nightshade</th>
<th>Shattercane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eclipta</td>
<td>Sandbur</td>
<td>Volunteer sorghum</td>
</tr>
<tr>
<td>Florida beggarweed**</td>
<td>Seedling</td>
<td>Wild proso millet</td>
</tr>
<tr>
<td></td>
<td>Johnsongrass</td>
<td>Wooly cupgrass</td>
</tr>
</tbody>
</table>

* See “PRODUCT INFORMATION” section. Control of these weeds can be variable from partially to variable from weather conditions. Control may be improved by following these suggested procedures:

A) Use 2 to 2.67 pts./Ac. or the pre-plant surface-applied rate for this product alone or in tank-mixtures, if allowed, when making pre-plant incorporated or pre-emergence applications.

B) Thoroughly till moist soil to destroy germinating and emerged weeds. If this product is to be applied pre-plant incorporated, this tillage may be used to incorporate this product if uniform 2 inch incorporation is achieved as recommended under “APPLICATION PROCEDURES”.

C) Plant Field corn, Sweet corn and Popcorn into moist soil immediately after tillage. If this product is to be used pre-emergence, apply at planting or immediately after planting.
**For partial control of this weed, use a minimum of 2 pts./Ac. and apply pre-emergence.**

### 3) ROTATIONAL CROPS

**This Product Alone:**

A) If crop treated with this product alone is lost, either Field corn, Sweet corn or Popcorn may be replanted immediately. Do not make a second broadcast application of this product. If the original application was banded and the second crop is planted in the untreated row middles, a second banded treatment may be applied.

B) Barley, Oats, Rye or Wheat may be planted 4.5 months following tank-mixtures and directed to the base of Corn plants in excess of 5 inches tall. Do not graze, feed forage or fodder from Cotton to livestock.

C) Field corn, Sweet corn and Popcorn, in addition to Barley, Buckwheat, Cabbage, Cotton, Peanuts, Pod crops, Potatoes, Safflower, Grain or Forage Sorghum, Soybeans, Milo, Oats, Peppers, Rice, Root crops, Rye, Tobacco or Wheat may be planted in the Spring following treatment. Clover may be seeded 9 months following application. Do not graze, feed forage or fodder from Cotton to livestock.

D) Following a lay-by treatment or multiple treatments applied the previous season, Field corn, Sweet corn and Popcorn in addition to Cabbage, Peppers or Tobacco may be planted in the Spring. All other rotational crops may be planted 12 months after a lay-by application.

**This Product In Tank-Mixtures:**

For Rotational Crop restrictions for this product used in tank-mixtures, refer to the statements/restrictions above for this product and to the respective product labels of any mixing partner(s) for additional statements/restrictions.

**Important Notes:** To avoid injury to rotational Alfalfa or Clover: (1) Do not apply more than 2 lbs. a.i. per acre (2 pts. of this product) pre-emergence (including pre-plant surface, pre-plant incorporated, post-plant incorporated, etc.) and (2) Do not make lay-by or post-emergent applications of this product.

**CORN (FIELD, SWEET, POPCORN) — THIS PRODUCT ALONE**

Apply this product either pre-plant surface, pre-plant incorporated or pre-emergence using the appropriate rate specified below.

1) **PRE-PLANT SURFACE-APPLIED**

Refer to instructions for use of this product alone under “APPLICATION PROCEDURES”.

A) **Fall Application (Apply after September 30 in MN, ND, SD, WI and north of Route 30 in IA; Apply after October 15 north of Route 91 in NE and south of Route 30 in IA; Apply after October 31 north of Route 136 in IL):**

In all situations, apply to crop stubble after harvest when the sustained soil temperature at a 4 inch depth is less than 55°F and falling. In Minimum-till or No-tillage systems, soils having greater than 2.5% organic matter, use 1.67 to 2 pts./Ac. on Medium-textured and 2 pts./Ac. on Fine-textured soils. Do not apply to frozen ground. A tillage operation may precede the application. A Fall and/or a Spring tillage may follow application, but do not exceed an incorporation depth greater than 2 to 3 inches. Minimize furrow and ridge formation in the tillage operations.

**Note:** If a Spring application is made, the total rate of the Fall plus Spring applications must not exceed the maximum total rate for Corn or illegal residues may result.

B) **Use on Medium and Fine-textured soils with Minimum-till or No-tillage systems in CO, IA, IL, IN, KS, KY, MN, MO, MT, ND, NE, SD, TN, WI and WY.** Apply two-thirds of the recommended rate of this product (1.67 pts./Ac. on Medium soils and 2 pts./Ac. on Fine soils) as a split treatment 30 to 45 days before planting and the remainder at planting. Applications made less than 30 days prior to planting may be a split or single treatment. Apply 1.33 pts./Ac. on Coarse soils not more than 2 weeks prior to planting.

C) **On Medium and Fine-textured soils with Minimum or No-tillage systems in CT, DE, MA, MD, ME, MI, NH, NY, OH, PA, RI, VA, VT and WV, pre-plant surface applications may be applied following the directions for use above. If the amount of rainfall results in unsatisfactory length of weed control following the earlier treatment, a post-emergence application of an appropriately labeled Broadleaf and/or grass weed herbicide may be used, i.e., Accent®, Atrazine, Banvel, Basagran, Beacon®, Bicep®, Bromoxynil (Brominal® or Buctril®), Exceed® or 2,4-D. If the post-emergence treatment includes the herbicide used pre-plant surface-applied, do not exceed the total labeled rate for Field corn, Sweet corn and Popcorn on a given soil texture. Observe all directions for use, precautions and limitations on the label of the post-emergent herbicide.**

2) **PRE-PLANT INCORPORATED OR PRE-EMERGENCE**

Follow instructions for use of this product alone under “APPLICATION PROCEDURES”. On Coarse soils, apply 1 to 1.33 pts./Ac. of this product if organic matter content is less than 3% or 1.33 pts./Ac. if organic matter content is 3% or greater. On Medium soils, apply 1.33 to 1.67 pts./Ac. of this product. On Fine soils, apply 1.33 to 1.67 pts./Ac. of this product if organic matter content is less than 3% or 1.67 to 2 pts./Ac. if organic matter content is 3% or greater.

3) **POST-EMERGENCE OR LAY-BY**

To extend the duration of weed control in Field corn, Sweet corn and Popcorn, a maximum rate of 2 pts./Ac. of this product may be applied after Corn emergence until the Corn plants reach 40 inches in height, following any pre-plant surface-applied, pre-plant incorporated or pre-emergence herbicide application, including this product. For best results, applications should be made to soil free of emerged weeds and directed toward the base of Corn plants in excess of 5 inches tall. The total rate of this product applied on Field corn, Sweet corn and Popcorn during any one crop year should not exceed 4 pts./Ac., depending on soil texture.

**Use Precautions for all applications to Corn:** To avoid possible illegal residues, do not graze or feed forage from treated areas for 30 days following application. Do not use on Peat or Muck soils.

**Shattercane, Wild Proso Millet, Woolly Cupgrass and Eclipta — Partial Control:** For more consistent partial control of Shattercane, Wild proso millet, Woolly cupgrass or Eclipta, apply 2 to 2.55 pts./Ac. as a single application; or apply 1 to 1.33 pts./Ac. of this product pre-plant incorporated followed by 1 to 1.33 pts./Ac. of this product pre-emergence. However, do not apply more than a total of 2.55 pts./Ac. Make the pre-emergence application during or after planting, but before weeds and Corn emerge. Apply the 1.33 pts./Ac. rate of this product when a heavy infestation of Shattercane, Wild proso millet, Woolly cupgrass or Eclipta is expected. A shallow cultivation may be needed to control any late emerging weeds.

**Woolly Cupgrass and Wild Proso Millet Control Program:** For control of these species, use the following 3 step program:

1) **Apply this product early pre-plant, pre-plant incorporated or pre-emergence at 1.67 pts./Ac. on Medium soils and 2 pts./Ac. on Fine-textured soils up to the maximum label rate. Lightly incorporate with a rotary hoe if rainfall does not occur within 5 to 7 days.**

2) **Apply a post-emergence tank-mix of Beacon at 0.38 oz./Ac. or Exceed at 1 packet per 4 acres plus Accent SP at 0.33 oz./Ac. plus 1 qt. of crop oil concentrate plus 1 gal./Ac. of 28% nitrogen or the equivalent amount of ammonium sulfate, when grasses are 2 to 3 inches tall and the Field corn, Sweet corn and Popcorn is at least 4 inches tall.**

3) **Cultivate 14 to 21 days after the post-emergence application.**

**Notes:**

1) Do not apply more than the labeled application rate for a given soil texture per year, either as a single or split treatment. Illegal residues may result.

2) In Field corn, Sweet corn and Popcorn, this product may be used up to 2.75 pts./Ac. as either a pre-plant surface, pre-plant incorporated or pre-emergence treatment on soils having an organic matter content between 6% and 20% or up to 2 pts./Ac. on any soil for extended residual control and where severe stands of problem weeds are expected.

3) In the event of escape of Annual weeds following a pre-plant surface, pre-plant incorporated or pre-emergence treatment of this product, follow with a post-emergence application of an appropriately labeled Broadleaf and/or grass weed herbicide, i.e., Accent®, Atrazine, Banvel, Basagran, Beacon®, Bicep®, Bromoxynil (Brominal® or Buctril®), Exceed® or 2,4-D. If the post-emergence treatment includes the herbicide used in earlier treatment, i.e., Atrazine, do not exceed the total labeled rate for Field corn, Sweet corn and Popcorn on a given soil texture.
4) Brominal or Buctril may be applied post-emergence alone or in tank-mix combination with Atrazine. Do not exceed 1.2 lbs. of Atrazine per acre in tank-mix combination with Brominal or Buctril post-emergence. Refer to the Atrazine, Brominal and Buctril labels for specific rates and use precautions.

5) Do not use this product on Peat or Muck soils.

**THIS PRODUCT IN TANK-MIXTURES**

This product in any tank-mixture for Field corn, Sweet corn and Popcorn (except this product + Atrazine post-emergence and this product + Banvel post-emergence) may be applied in water or fluid fertilizer. Use only water in this product + Atrazine or this product + Banvel post-emergence tank-mixes.

**Note:** For all applications to Field corn, Sweet corn and Popcorn, do not graze or feed forage from treated areas for 30 days following application or possible illegal residues may result.

* This product may be tank-mixed with the herbicides listed on this label provided the specific product(s) tank-mixed is registered for use on Field corn, Sweet corn and Popcorn.

**IMPORTANT: FOR TANK-MIXTURES WITH ATRAZINE** — If applying this product in tank-mixture with Atrazine, all the restrictions and rate limitations on the Atrazine label must be followed, if more restrictive/protective than those on this label. In addition, if Atrazine is/must be applied at rates lower than those recommended on this label, Broadleaf weed control may be affected. Refer to the Atrazine label for weeds controlled at the reduced rates.

X = control; 0 = partial control; 0–X = partial to full control depending on ratio of products used or on weed population

This product in any tank-mixture for Field corn, Sweet corn and Popcorn may be applied in water or fluid fertilizer, except as noted.

**COMMENTS — Chart 1: This Product in Tank-Mixtures**

1) **Special Mixing Instructions for this product + Atrazine or Simazine and Prowl.**

A) Fill the spray tank one-quarter full with water or fluid fertilizer and start agitation.

B) To aid compatibility, add a compatibility agent, such as MIX™, Unite or X-77®, at 4 pts./100 gals. of spray mixture.

C) Then add the Atrazine or Simazine and allow it to become dispersed.

D) Then add this product and Prowl 4E.

E) Add the rest of the water.

2) **Although a single formulation for Atrazine or Simazine is listed in the rate tables, other formulations may be substituted using the following formula:**

   - 1 lb. of Atrazine 90DF or Simazine 90DF = 1.8 pts. of Atrazine 4L or Simazine 4L

3) Follow the rates, restrictions and limitations on the Atrazine label.

4) See additional mixing instructions on the Atrazine label.

5) **Use Precautions:** Do not exceed a total of 2.5 lbs. of Atrazine per acre per year. However, certain states may have established rate limitations for Atrazine within specific geographical areas. Consult your state lead pesticide control agency for additional information.

6) It is a violation of this label to deviate from state use regulations.

7) Other formulations of Linuron can be used:

   - 1 lb. of Linuron DF = 1 pt. of Linuron 4L

8) In Minimum-tillage and No-tillage systems, mix with Gramoxone Max for control of most emerged Annual weeds and suppression of Perennial weeds; or with Landmaster BW for suppression of emerged Field bindweed and control or suppression of Annual weeds; or with Glyphosate for control of most emerged Annual and Perennial weeds.

### Notes:

1) For all applications to Field corn, Sweet corn and Popcorn, do not graze or feed forage from treated areas for 30 days following application. Possible illegal residues may result.

2) When applying this product in tank-mixture with Atrazine, do not exceed a total of 2.5 lbs. of Atrazine per acre per year.

3) Refer to “Note 3” under “CORN (FIELD, SWEET, POPCORN) — THIS PRODUCT ALONE” section for specified sequential post-emergence treatments if escape weeds develop.

4) This product may be used up to 2 pts./Ac. in combinations on any soil for extended residual control and where severe stands of problem weeds are expected.

**TANK-MIXTURE WITH ATRAZINE OR SIMAZINE — PRE-PLANT SURFACE, PRE-PLANT INCORPORATED OR PRE-EMERGENCE**

In addition to the weeds controlled by this product alone, this product + Atrazine or Simazine or this product + Atrazine + Simazine, applied pre-plant surface, pre-plant incorporated or pre-emergence, also controls the following weeds: Browntop panicum, Cocklebur, Common purslane, Hairy nightshade, Lambquarters, Morningglory, Ragweed, Smartweed and Velvetleaf.

Apply this product + Atrazine or Simazine or this product + Atrazine + Simazine either pre-plant surface, pre-plant incorporated or pre-emergence.

**Pre-plant Surface-Applied:** Follow instructions for use of this product alone under Application Procedures and under application instructions for this product alone on Field corn, Sweet corn and Popcorn. Apply this product + Atrazine or Simazine or this product + Atrazine + Simazine on Medium soils (1.67 pts./Ac. of this product + 3.2 to 4 pts./Ac. of Atrazine 4L or Simazine 4L or Atrazine 4L + Simazine 4L combined) and on Fine soils (1.67 to 2 pts./Ac. of this product + 4 to 5 pts./Ac. of Atrazine 4L or Simazine 4L or Atrazine 4L + Simazine 4L combined) in Minimum-tillage and No-tillage systems in CO, IA, IL, IN, KS, KY, MN, MO, MT, ND, NE, SD, TN, WI and WY. Apply the tank-mixtures as a split or single treatment in those states and as indicated in the “THIS PRODUCT — ALONE PRE-PLANT SURFACE-APPLIED” section of the label for Corn. On Coarse soils, apply 1.33 pts./Ac. of this product and 3.2 pts./Ac. of Atrazine 4L or Simazine 4L or Atrazine 4L + Simazine 4L combined.

**Pre-plant Incorporated or Pre-emergence:** Follow instructions for use of this product alone under “APPLICATION PROCEDURES”. Apply this product + Atrazine or Simazine or this product + Atrazine + Simazine, using the appropriate rates from Table 1.

**Note:** Do not apply more than the labeled rate for a given soil texture per year, either as a split or single treatment. Illegal residues may result.
Shattercane, Wild Proso Millet, Woolly Cupgrass and Eclipta — Partial Control

For more consistent partial control of Shattercane, Wild proso millet, Woolly cupgrass or Eclipta, where this product is applied in tank-mixture or sequentially with other registered Field corn, Sweet corn and Popcorn herbicides apply 2 to 2.33 pts. as a single application or the following applications may be made:

1) Apply 1 to 1.33 pts./Ac. of this product + Atrazine or Simazine pre-plant incorporated, followed by 1 to 1.33 pts./Ac. of this product pre-emergence. Make the pre-emergence application during or after planting, but before weeds and Corn emerge.

2) Apply this product at 1.33 pts./Ac. alone or in tank-mix combination with up to 2 lbs. per acre of Atrazine or Simazine pre-plant incorporated. Do not exceed the total rate of triazine herbicide specified for Field corn, Sweet corn and Popcorn grown on a given soil texture. Follow with a post-directed application of Evik® 80W at 2.5 lbs./Ac. Refer to the Evik 80W label for specific directions for the post-directed application.

3) Apply Eradicane® or Sutan® (or equivalent EPTC or butylate formulation) at labeled rates pre-plant incorporated, followed by a pre-emergence application of this product at 1 to 1.33 pts./Ac. Do not use Eradicane or Sutan on soils where rapid degradation has been shown to occur. Make the pre-emergence application during or after planting, but before weeds and Corn emerge.

Use Precaution: When following the application regimes in numbers 1 to 3 above, a shallow cultivation may be needed after the pre-emergence or post-emergence application to help control any late emerging Shattercane or Wild proso millet plants.

Apply 1 pt./Ac. of this product + 1.3 lbs./Ac. of Atrazine 90DF* on Coarse soils, 1.33 pts./Ac. of this product + 1.8 lbs./Ac. of Atrazine 90DF on Medium soils or 1.33 to 1.67 pts./Ac. of this product + 1.8 to 2.2 lbs./Ac.** of Atrazine 90DF on Fine soils. Apply this tank-mixture before grass and Broadleaf weeds pass the 2 leaf stage and before Field corn, Sweet corn and Popcorn exceeds 5 inches in height. Application to weeds larger than the 2 leaf stage will generally result in unsatisfactory control.

Lay-by: Apply to Field corn, Sweet corn and Popcorn plants not more than 12 inches tall. Applications to Corn in excess of 5 inches should be directed to the base of the Corn plants; whereas, applications to Corn plants less than 5 inches tall may be made over-the-top. Occasionally, some Corn leaf burn may result, but this should not affect later growth or yield. Do not apply this post-emergence tank-mixture in fluid fertilizer. Severe crop injury may occur.

** When using Atrazine 4L, use equivalent rates. One pound of Atrazine 90DF equals 1.8 pts. of Atrazine 4L.

** For better control of Cocklebur, Morning-glory, Velveteen and Yellow nutsedge on Fine-textured soils above 3% organic matter, apply 2.2 lbs./Ac. of Atrazine 90DF or equivalent rate of Atrazine 4L, with 1.33 to 1.67 pts./Ac. of this product.

Tank-mixtures of this product + Atrazine may be applied following use of any registered pre-plant surface-applied, pre-plant incorporated or pre-emergence Field corn, Sweet corn and Popcorn herbicide, including this product + Atrazine.

* Use Simazine in preference to Atrazine when heavy infestations of Crabgrass or Fall panicum are expected. On soils having between 6% and 20% organic matter, this product may be used up to 2.33 pts./Ac. in tank-mix combination with 2.2 lbs./Ac. of Atrazine 90DF, or equivalent rates of Atrazine 4L. Refer to the Atrazine label for weeds controlled at this reduced rate.

** When using the tank-mixture of this product + Atrazine 90DF + Simazine 90DF, use equal rates of each as shown when heavy Broadleaf weed infestations are expected. When heavy infestations of Crabgrass or Fall panicum are expected, use a 1:2 ratio of Atrazine + Simazine, instead of the 1:1 ratio given in Table 1. (Example: Total Atrazine 90DF + Simazine 90DF = 1.2 lbs./Ac., use 0.4 lb. of Atrazine + 0.8 lb. of Simazine, respectively.) Refer to the “TANK-MIXTURE WITH ATRAZINE-POST-EMERGENCE” section for Atrazine 4L and Simazine 4L conversions.

*** For Cocklebur, Yellow nutsedge and Velveteen control on Fine-textured soils above 3% organic matter, apply 2.25 lbs./Ac. of Atrazine 90DF, or equivalent rates of Atrazine 4L or the same total amount of Atrazine + Simazine with 1.33 to 1.67 pts./Ac. of this product.

Note: The total rate of this product should not exceed 4 pts., nor more than 2.5 lbs. of Atrazine rate during any one crop year. Illegal texture and residues may result. Refer to the Atrazine label for geographic, soil texture and rotational restrictions.

TANK-MIXTURE WITH BANVEL

Pre-emergence: Use this tank-mixture only on Field corn which is flat-planted (no furrows) in CO, IA, IL, IN, KS, MN, NE, OH, SD and WI. In addition to the weeds controlled by this product alone, this product + Banvel, applied pre-emergence, also controls Barnyardgrass, Ragweed, Smartweed, Cocklebur*, Jimsonweed*, Morning-glory* and Velveteen*.

* Partially controlled.

ME-TOO-LACHLOR II Page 6 of 10
Apply this product + Banvel pre-emergence. Broadcast 1 pt./Ac. of Banvel with 1.33 pts./Ac. of this product on Medium soils or with 1.33 to 1.67 pts./Ac. of this product on Fine soils. Do not apply on Coarse soils or on soils with less than 2.5% organic matter. Apply this tank-mix to the soil surface at planting or after planting, but before Field corn emerges. Plant seed at least 1.5 inches deep and apply behind planting equipment, avoiding incorporation by the planter wheel or other seed-covering device. Do not incorporate before Field corn plants emerge. If it is necessary for rotary hoe to break the soil crust, do not disturb the soil more than one-half inch deep.

**Use Precautions:** (1) Avoid drift to sensitive non-target plants, such as Soybeans, during application. Injury may occur. (2) Do not apply with aircraft.

**Post-emergence for Control of Pigweed (Mid-Atlantic states including DE, MD, PA, VA and WV):** Apply 1 to 1.5 pts. of this product + 0.5 to 1 pt./Ac. of Banvel by ground equipment when Pigweed plants are less than 3 inches tall and before Field corn exceeds 5 inches in height in a minimum of 20 gals. of spray per acre. Use the lower rate on Coarse-textured and Low organic matter soils. Use the higher rate on Fine-textured and High organic matter soils. Banvel SG® and Clarity® may be used at equivalent pounds of active ingredient per acre.

**Use Precautions:** (1) Avoid drift to sensitive non-target plants, such as Soybeans, during application or injury may occur. (2) Do not apply with aircraft.

**TANK-MIXTURE WITH ATRAZINE AND LINURON FOR CONTROL OF LAMBSQUARTERS AND PIGWEEDE**

For prolonged control of Lambsquarters and Pigweed in DE, MD, NJ, NY, PA, VA and WV, this product may be applied pre-emergence in tank-mix combination with Atrazine + Linuron. Apply this product and Atrazine according to the rates in Table 1 and Linuron according to the following rates.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Observe all directions for use, use precautions and limitations on this product, Atrazine and Linuron labels when applying these products in tank-mix combinations.

**TANK-MIXTURE WITH ATRAZINE OR SIMAZINE + PROWL FOR PROLONGED CONTROL OF LAMBSQUARTERS AND PIGWEEDE IN FIELD CORN ONLY (NORTHEAST U.S., INCLUDING MI, IN, KY AND STATES EAST OF THESE)**

For prolonged control of Lambsquarters and Pigweed in addition to a broad spectrum of Annual broadleaf and grass weeds, this product in tank-mix combination with Atrazine* or Simazine + Prowl 4E may be applied after planting, but before Field Corn or weeds emerge. Apply by ground equipment in a minimum of 10 gals. of water or 20 gals. of liquid fertilizer. Apply by air in a minimum of 5 gals. of water. Refer to Table 1 of this label for rates of this product, Atrazine or Simazine to be applied. Apply Prowl 4E according to the following rates below in Table 2.

* Do not apply this product in tank-mix combination with Atrazine 80W + Prowl, as this combination is not compatible. Other Atrazine formulations may be used.

**Mixing Instructions:** See “TANK-MIXTURE WITH ATRAZINE-POST-EMERGENCE”.

**Table 2: Prowl 4E — Broadcast Rates Per Acre**

Observe all directions for use, use precautions and limitations on the respective product labels when applying these products in tank-mix combination. Refer to the Prowl 4E label for replanting instructions in the event of crop loss.

**TANK-MIXTURE WITH ATRAZINE OR SIMAZINE, ATRAZINE + SIMAZINE, WITH GRAMOXONE MAX, LANDMASTER BW OR GLYPHOSATE FOR MINIMUM-TILLAGE OR NO-TILLAGE SYSTEMS**

*See “TANK-MIXTURE WITH ATRAZINE-POST-EMERGENCE” for special mixing instructions.

In Minimum-tillage or No-tillage systems where Field corn, Sweet corn and Popcorn is planted directly into a cover crop, stale seedbed, established sod or previous crop residues, the contact herbicides Gramoxone Max, Landmaster BW or Glyphosate may be added to a tank-mix of this product, Atrazine or Simazine or this product + Atrazine + Simazine. See Comment No. 7 following Chart 1. This product + Atrazine or Simazine or this product + Atrazine + Simazine portion of the tank-mix provides pre-emergence control of the weeds listed on this label in the tank-mix section for “THIS PRODUCT + ATRAZINE OR SIMAZINE OR THIS PRODUCT + ATRAZINE + SIMAZINE-PRE-PLANT SURFACE, PRE-PLANT INCORPORATED OR PRE-EMERGENCE”.

**Application:** Apply before, during or after planting, but before the Field corn, Sweet corn and Popcorn emerges, at the rates specified in the Gramoxone Max, Landmaster BW or Glyphosate label.

**Gramoxone Max:** See the Gramoxone Max label for weeds controlled and specified rates. This treatment will not control weeds taller than 6 inches.

**Note:** Do not apply combinations containing Gramoxone Max in suspension-type liquid fertilizers because the activity of Parquat will be reduced.

**Landmaster BW:** 27 to 54 fl. ozs./Ac. depending on weed species and size. See the Landmaster BW label for weeds controlled, specified rates for specific weeds and other information concerning use.

**Glyphosate:** See the Glyphosate or Roundup RT label for weeds controlled, specified rates and other use precaution directions. Apply in 20 to 60 gals. of water or fluid fertilizer per acre with ground equipment.

On Coarse soils, apply 1 pt./Ac. of this product with 1.3 lbs. of Atrazine 90DF or Simazine 90DF or with 0.7 lb. of Atrazine 90DF** + 0.7 lb. of Simazine 90DF**. On Medium soils, apply 1.33 pts./Ac. of this product with 1.8 lbs. of Atrazine 90DF or Simazine 90DF or with 0.9 lb. of Atrazine 90DF + 0.9 lb. of Simazine 90DF. On Fine soils**, apply 1.33 to 1.67 pts./Ac. of this product with 1.8 to 2.2 lbs. of Atrazine 90DF or Simazine 90DF or with 0.9 to 1.1 lbs. of Atrazine 90DF + 0.9 to 1.1 lbs. of Simazine 90DF.

* Use Simazine in preference to Atrazine when heavy infestations of Crabgrass or Fall panicum are expected.

** When using the tank-mixture of this product + Atrazine 90DF + Simazine 90DF, use equal rates of Atrazine and Simazine as shown when heavy Broadleaf weed infestations are expected. When heavy infestations of Crabgrass or Fall panicum are expected, use a 1:2 ratio of Atrazine + Simazine, instead of the 1:1 ratio shown. (Example: Total Atrazine 90DF + Simazine 90DF: 1.8 lbs./Ac., use 0.6 lb. of Atrazine + 1.2 lbs. of Simazine, respectively.) Refer to Comment No. 2 following Chart 1 for Atrazine 4L and Simazine 4L conversions.

***For Cocklebur, Yellow nutsedge and Velvetleaf control on Fine-textured soils above 3% organic matter, apply 2.25 lbs./Ac. of Atrazine 90DF or equivalent rate of Atrazine 4L or the same total amount of Atrazine + Simazine, with 1.33 to 1.87 pts./Ac. of this product.

**TANK-MIXTURE WITH ATRAZINE OR ATRAZINE + 2,4-D OR ATRAZINE + 2,4-D + BANVEL FOR MINIMUM-TILLAGE OR NO-TILLAGE SYSTEMS**

In Minimum-tillage or No-tillage systems where Field corn, Sweet corn and Popcorn is planted directly into a cover crop, stale seedbed, established sod or previous crop residues, this product applied in combination with Atrazine will kill most emerged small Annual weeds. Apply this product + Atrazine before, during or after planting but before Field corn, Sweet corn and Popcorn emerges, according to the rates in Table 1. Where heavy crop residues exist, add 0.8 to 1.6 pts./Ac. of an appropriately labeled 3.8 lbs. a.i./gal. of 2,4-D amine (such as Weedar® 64, Weedar 64A, DMA-4 Herbicide or Formula 40) to the spray tank last and apply in a minimum of 25 gals. of carrier per acre. As carriers, nitrogen solutions and complete liquid fertilizers, applied before Corn emergence, enhance burndown of existing weeds and therefore are preferred instead of water. Add X-77 surfactant at 1 to 2 pts./100 gals. of diluted spray or another appropriate surfactant at its labeled rate or add crop oil concentrate plus 28% liquid nitrogen (or equivalent).
Apply before weeds exceed 3 inches in height. If Alfalfa is present, add Barvel to the spray mixture at 0.33 to 0.5 pt./Ac. and apply before Alfalfa exceeds 6 inches in height.

For fields with existing sod grasses (e.g., Bromegrass Orchardgrass, Rye or Timothy), when existing weeds exceed 3 inches in height or when very dry conditions exist, add Gramoxone Max at the label specified rate in place of or in addition to 2,4-D, as indicated above. Do not apply Gramoxone Max in suspension-type liquid fertilizer. Observe all directions for use, use precautions and limitations on the respective product labels when applying these products in tank-mix combination.

**TANK-MIXTURE WITH MARKSMAN IN CONSERVATION TILLAGE — FIELD CORN**

In conservation tillage systems where Field corn is planted directly into a cover crop or previous crop residue, this product + Marksmans before, during or after planting but before Corn emergence on Medium and Fine soils with greater than 2.5% organic matter. For fields with existing vegetation exceeding 3 inches in height or when very dry conditions exist, add Gramoxone Max at its standard rate. This product + Marksmans may be applied post-emergence to Field corn less than 3 inches tall and before weedy grasses exceed the 2 leaf stage. As carriers, nitrogen solutions and complete liquid fertilizers applied before Corn emergence enhance burndown of existing weeds. Do not apply Gramoxone Max in suspension-type liquid fertilizer or use on emerged Corn.

Refer to the Marksmans label and follow all directions, limitations, use precautions and information regarding application and use in Field corn.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Keep container closed to prevent spills and contamination. Store in original container.

**PESTICIDE DISPOSAL:** Open dumping is prohibited. Wastes resulting from the use of this product are toxic. Improper disposal of unused pesticide, spray mixture or rinsate is a violation of Federal law. Pesticide, spray mixture or rinsate that cannot be used according to label instructions must be disposed of according to Federal, state or local procedures. For guidance in proper disposal methods, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office.

**CONTAINER HANDLING:**

Nonrefillable Container (rigid material; less than 5 gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container one-fourth full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Dispose of empty container in a sanitary landfill or by incineration or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Nonrefillable Container (rigid material; 5 gallons up to < 250 gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill container one-fourth full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Dispose of empty container in a sanitary landfill or by incineration or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

(Continued)
APPENDICES

APPENDIX A: COMPATIBILITY TEST

Since liquid fertilizers can vary, even within the same analysis, always check compatibility with herbicide(s) each time before use. Be especially careful when using complete suspension or fluid fertilizers, as serious compatibility problems are more likely to occur. Commercial application equipment may improve compatibility in some instances.

The following test assumes a spray volume of 25 gallons/acre.

For other spray mixtures, make appropriate changes in the ingredients.

Check compatibility using this procedure:

1. Add 1 pt. of fertilizer to each of 2 one-quart jars with tight lids.

2. To one of the jars, add one-quarter teaspoon or 1.2 milliliters of a compatibility agent approved for this use, such as MIX™, Complex® or Units® (one-quarter tsp. is equivalent to 2 pts./100 gallons spray). Shake or stir gently to mix.

3. To both jars, add the appropriate amount of herbicide(s). If more than one herbicide is used, add them separately with dry herbicides first, flowables next and emulsifiable concentrates last. After each addition, shake or stir gently to thoroughly mix. The appropriate amount of herbicides for this test follows:

   **Dry herbicides:** For each pound to be applied per acre, add 1.5 level teaspoons to each jar.

   **Liquid herbicides:** For each pint to be applied per acre, add one-half teaspoon or 2.5 milliliters to each jar.

**Note:** For this product in tank-mixtures with Atrazine + Simazine, use one-third to one-half the amount of Atrazine specified above and the remainder as Simazine, depending on whether the 1.2:1 ratio of Atrazine to Simazine is to be applied.

4. After adding all ingredients, put lids on and tighten and invert each jar 10 times to mix. Let the mixtures stand 15 minutes and then look for separation, layering, precipitates, gels, heavy oily films on the jar or other signs of incompatibility. Determine if the compatibility agent is needed in the spray mixture by comparing the 2 jars. If either mixture separates, but can be remixed readily, the mixture can be sprayed as long as good agitation is used. If the mixtures are incompatible, test the following methods of improving compatibility:

   (A) Slurry the dry herbicide(s) in water before addition or (B) Add one-half of the compatibility agent to the fertilizer and the other one-half to the emulsifiable concentrate or flowable herbicide before addition to the mixture. If incompatibility is still observed, do not use the mixture.

APPENDIX B: LOW CARRIER APPLICATION

For Broadcast Ground Application Only

Use sprayers such as Ag-Chem RoGator®, Hagie, John Deere Hi-Cycle®, Melroe Spra-Coupe, Tyler Patriot® or Willmar Air Ride® that provide accurate and uniform application. Only water may be used as a carrier. Screens in suction and in-line strainers should be 50 mesh. Manufacturers may require that tip screens as fine as 100 mesh be used with some nozzles. Use a pump with capacity to:

   (1) Maintain up to 40 psi at the nozzles and (2) Provide sufficient agitation in tank to keep mixture in suspension. Use a minimum of 5 gals. of spray mixture per acre. Maximum recommended sprayer speed is 15 mph. Rinse sprayer thoroughly with clean water immediately after each use.

**Note:** Low pressure nozzles are recommended to reduce drift and increase application accuracy. Care should be taken when using automatic rate controlling devices to spray the material within the rated working pressure and flow ranges of the nozzles selected. Nozzle screens should be used when recommended by the manufacturer. All nozzles should be placed on 20 inch centers except flooding types which should be placed on 40 inch centers. When flat fan-type nozzles are used, angles of 80° or 110° are recommended. Always read and follow the manufacturer’s directions for optimum setup and performance of their nozzles or tips.

APPENDIX C: AERIAL APPLICATION

**Do not apply by air in the state of New York.**

Apply this product in water alone, in tank-mixtures with Atrazine or Linuron in a minimum total volume of 2 gals./Ac. by aircraft. This product may also be applied by air in combination with Prowl. Avoid application under conditions where uniform coverage cannot be obtained or where excessive spray drift may occur. In order to assure that spray will be controllable within the target area when used according to label directions, make applications at a maximum height of 10 feet, using low-drift nozzles at a maximum pressure of 40 psi and restrict application to periods where wind speed does not exceed 10 mph. To assure that spray drift will not adversely affect adjacent sensitive non-target plants, apply this product alone or this product + Atrazine by aircraft at a minimum upward distance of 400 feet from sensitive plants or apply this product + Linuron at a minimum upward distance of 300 feet from sensitive plants.

Avoid application to humans or animals. Flagmen and loaders should avoid inhalation of spray mist and prolonged contact with skin.

**Aerial Drift Management**

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. The following drift management requirements must be followed to avoid off-target drift movements from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

- The distance of the outermost nozzles on the boom must not exceed three-fourths the length of the wingspan or rotor.

- Nozzles must always point backward parallel with the airstream and never be pointed downward more than 45 degrees.

Where states have more stringent regulations, they should be observed. The applicator should be familiar with and take into account the information covered in the “Aerial Drift Reduction Advisory Information” section below.

**Aerial Drift Reduction Advisory Management:**

**Information on Droplet Size**

The most effective way to reduce drift potential is to apply large droplets. The drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly or under unfavorable environmental conditions (see “Wind”, “Temperature and Humidity” and “Temperature Inversions”).

**Controlling Droplet Size**

- **Volume** – Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Number of nozzles** – Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation** – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type** – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

**Boom Length**

For some use patterns, reducing the effective boom length to less than three-fourths of the wingspan or rotor length may further reduce drift without reducing swath width.

**Application Height**

Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

**Swath Adjustment**

When applications are made with a crosswind, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.)

**Wind**

Drift potential is lowest between speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential.

**Temperature and Humidity**

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

**Temperature Inversions**

Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights when there is limited cloud cover and light to no wind.

ME-TOO-LACLHILL II Page 9 of 10
They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog. However, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas

This pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive area).

APPENDIX D: CENTER PIVOT IRRIGATION APPLICATION

This product alone in tank-mixture with other herbicides on this label, which are registered for center pivot application, may be applied in irrigation water pre-emergence (after planting, but before weeds or crop emerge) at rates specified on this label. This product also may be applied post-emergence to the Field corn, Sweet corn or Popcorn crop and pre-emergence to weeds in Field corn, Sweet corn or Popcorn where post-emergence applications are allowed on this label. Follow all restrictions (height, timing, rate, etc.) to avoid illegal residues.

Apply this product only through a center pivot irrigation system. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension specialists, equipment manufacturers or other experts. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the irrigation system and responsible for its operation or under the supervision of the responsible person, shall shut down the system and make the necessary adjustments should the need arise.

Operating Instructions

1. The system must contain a functional check-valve, vacuum relief valve and low-pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check-valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump or piston pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Do not apply when wind speed favors drift beyond the area intended for treatment.

8. Prepare a mixture with a minimum of 1 part of water to 1 part herbicide(s) and inject this mixture into the center pivot system. Injecting a larger volume of more dilute mixture per hour will usually provide more accurate calibration of metering equipment. Maintain sufficient agitation to keep the herbicide in suspension.

9. Meter into irrigation water during entire period of water application.

10. Apply in one-half to 1 inch of water. Use the lower water volume (one-half inch) on Coarse-textured soils and the higher volume (1 inch) on Fine-textured soils. More than 1 inch of water at application may reduce weed control by moving the herbicide below the effective zone in the soil.

Use Precautions: For center pivot applications: Where sprinkler distribution patterns do not overlap sufficiently, unacceptable weed control may result. Where sprinkler distribution patterns overlap excessively, crop injury may result.

APPENDIX E: DRY BULK GRANULAR FERTILIZERS

Many dry bulk granular fertilizers may be impregnated or coated with this product alone or selected tank-mixtures of this product which are registered for pre-plant incorporated or pre-plant surface application which are used to control weeds in crops on this product label and are not prohibited from use on dry bulk granular fertilizers. When applying this product or this product’s mixtures with dry bulk granular fertilizers, follow all directions for use and use precautions on the respective product labels regarding Field corn, Sweet corn and Popcorn, rates per acre, soil texture, application methods (including timing of application) and rotational crops. All individual state regulations relating to dry bulk granular fertilizer blending, registration, labeling and application are the responsibility of the individual and/or company selling the herbicide/fertilizer mixture.

Prepare the herbicide/fertilizer mixtures by using any closed drum, belt, ribbon or other commonly used dry bulk fertilizer blender. Nozzles used to spray this product and mixtures of this product onto the fertil-izer must be placed to provide uniform spray coverage. Care should be taken to aim the spray directly onto the fertilizer only and to avoid spraying the walls of the blender. If the herbicide/fertilizer mixture is too wet, add a highly absorptive material, such as Agrisorb® or Celatom MP-179 or similar granular 200 is di-nomaceous/layer/mannan, to obtain a dry, free-flowing mixture. Absorptive materials should be added only after the herbicide has been thoroughly blended into the fertilizer mixture. Best application results will be obtained by using a granule of six-thirteenth particle size or of a size similar to that of the fertil-izer material being used. Generally, less than 2% by weight of absorptive material will be needed. Avoid using more than 5% absorptive material by weight. Calculate amounts of this product, Atrazine, Atrazine + Simazine or Simazine by the following formula:

\[
\text{lbs. of fertilizer per acre} \times \frac{2,000}{\text{pts./Ac. of liquid or dry product}} = \text{tons of liquid or dry product per ton of fertilizer}
\]

Pneumatic (Compressed Air) Application (This Product Alone):

High humidity, high urea concentrations, low fertilizer use rates and dusty fertilizer may cause fertilizer mixture to build up or plug the dis- tributor head, air tubes or nozzle deflector plates. To minimize buildup, pre-mix this product with Exxon Aromatic 200 at a rate of 1 to 4 pts./gal. of dry product. Aromatic 200 or similar granular 200 is di-nomaceous/layer/mannan, to obtain a dry, free-flowing mixture. Absorptive materials should be used when using Aromatic 200.

Notes: (1) Mixtures of this product and Aromatic 200 must be used on dry fertilizer only. Poor results or crop injury may result if these mixtures are used in water or liquid fertilizer solutions for spraying applications. (2) When impregnating this product in a blender before application, a drier mixture can be attained by substituting a drying agent for Aromatic 200. The use of Agrisorb FG or drying agents of six-thirteenth particle size is recommended. (3) Drying agents are not recommended for use with the On-The-Go impregnation equipment.

Use Precautions: To avoid potential for explosion, (1) Do not impregnate this product or this product mixtures on ammonium nitrate, potassium nitrate or sodium nitrate, either alone or in blends with other fertilizers. (2) Do not use this product or mixtures of this product on straight lime- stone since absorption will not be achieved. Fertilizer blends containing limestone can be impregnated.

Application

Apply 200 to 700 lbs. of the herbicide/fertilizer mixture per acre. For best results, apply the mixture uniformly to the soil with properly calibrated equipment immediately after blending. Uniform application of the herbicide/fertilizer mixture is essential to prevent possible crop injury. Non-uniform application may also result in unsatisfactory weed control. In areas where conventional tillage is practiced, a shallow incorporation of the mixture into the soil may improve weed control. On Fine or Medium-textured soils in areas where soil incorporation is not planned, i.e., reduced tillage situations or in some conventional till situations, make applications approximately 30 days before planting to allow moisture to move the herbicide/fertilizer mixture into the soil. On Coarse-textured soils, make applications approximately 14 days prior to planting.

Use Precaution: To avoid crop injury, do not use the herbicide/fertilizer mixture on Field corn, Sweet corn and Popcorn where bedding occurs.
