FOR CONTROL OF LISTED BROADLEAF WEEDS IN WHEAT, BARLEY, OATS, TRITICALE AND RYE

ACTIVE INGREDIENT:
Octanoic acid ester of bromoxynil (3,5-dibromo-4-hydroxybenzonitrile)* ................................. 30.1%
Isooctyl (2-ethylhexyl) Ester of 2,4-Dichlorophenoxyacetic Acid** ................................. 31.2%
OTHER INGREDIENTS .............................................................................................................. 38.7%
TOTAL ................................................................................................................................. 100.0%
Contains xylene range/petroleum distillates.
* Bromoxynil octanoate equivalent to 22.9% of bromoxynil or not less than 2.0 pounds of bromoxynil per gallon.
** 2,4-Dichlorophenoxyacetic acid equivalent to 29.8% or not less than 1.8 pounds per gallon, isomer specific by AOAC method.

KEEP OUT OF REACH OF CHILDREN

CAUTION – PRECAUCIÓN
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(if you do not understand the label, find someone to explain it to you in detail)

For Chemical Spill, Leak, Fire, Exposure or Accident, Call CHEMTREC (800) 424-9300.
For Medical Emergencies Only, Call 877-325-1840.

FIRST AID

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

IF SWALLOWED: Call a poison control center or doctor for treatment advice. Do not give any liquid to the person. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or a doctor for treatment advice.

IF INHALED: Remove person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-424-9300 for emergency medical treatment information.

NOTE TO PHYSICIAN

May pose an aspiration pneumonitis hazard. Contains petroleum distillate.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION – PRECAUCIÓN

Harmful if swallowed. Harmful if absorbed through skin. Causes moderate eye irritation. Avoid contact with eyes, skin or clothing. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical resistant to this product are barrier laminate, butyl rubber, nitrile rubber or viton. If you want more options, follow the instructions for category G on an EPA chemical resistant category selection chart.

All mixers, loaders, applicators, flaggers, and other handlers must wear:
• Long-sleeved shirt and long pants,
• Shoes and socks, plus
• Protective eyewear
• Chemical-resistant gloves except for pilots
• Chemical-resistant apron when mixing or loading, cleaning up spills or equipment, or otherwise exposed to the concentrate.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4)-6], the handler PPE requirements may be reduced or modified as specified in the WPS.

If you will handle a total of 60 gallons or more of this product per day, you must use a mechanical transfer system for all mixing and loading operations. If this product is packaged in a 30 gallon drum, you must use a mechanical transfer system which terminates in a drip-free hard coupling which may be used only with a spray or mix tank which has been filled with a compatible coupling. If you do not presently own or have access to a mechanical transfer system with this type of coupling, contact your dealer for information on how to obtain such a system or to modify your present system. When using a mechanical transfer system, do not remove or disconnect the pump or probe from the container until the container has been emptied and rinsed. The pump or probe system must be used to rinse the empty container and to transfer the rinseate directly to the mixing or spray tank.

To reduce exposure to residues, wash the spray rig, tractor, and all other equipment used to handle or apply this product with washer daily or before using the equipment for any other purpose.

See “Engineering Controls” for additional requirements.

Engineering Controls

Pilots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides [40 CFR 170.240(d)(6)].

APPLICATION BY CHEMIGUN must be done by fixed pipe, overhead sprinkler systems or hand moved pipe. If hand moved pipe is used for chemigation, the pipe must not be handled in any way until 24 hours after chemigation has been completed and residues have been flushed from the system. When applying by chemigation, no person may enter the application site unless in an enclosed vehicle.

DURING AERIAL APPLICATION, human flaggers are prohibited unless in enclosed vehicles. Aerial application is prohibited within 300 feet of residential areas (e.g., homes, schools, hospitals, shopping areas, etc.).

USER SAFE

Users should:
• Wash hands before eating, drinking, or smoking.
• Remove clothing immediately if pesticide gets on skin, wash immediately.
• Remove PPE immediately after handling; as possible, wash thoroughly and change clothes.

ENVIRC

This pesticide is toxic to fish and aquatic invertebrates present, or to intertidal areas below the organisms in water adjacent to treated areas; or in rice.

This chemical has properties and characteristics that make it suitable for use around groundwaters. Application around groundwaters.

DIRE

It is a violation of Federal law to use this product with water daily or before using the equipment for any other purpose.

See “Engineering Controls” for additional requirements.

Agricultural

Use this product only in accordance with Part 170. This standard contains requirements for nurseries, greenhouses, and handlers for decontamination, notification, and emergency procedures. The requirements by the Worker Protection Standard.

Do not enter or allow workers into the treated area

PPE required for entry to treated area involves contact with anything that has bee sleeves and long pants, chemical-resistant protective eyewear.

PHYSICAL A

Do not use or store near heat or open flame.
USER SAFETY RECOMMENDATIONS

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. If pesticide gets on skin, wash immediately with soap and water.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment washwater or rinsate.

This chemical has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Application around a cistern or well may result in contamination of drinking water or groundwater.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read entire label before using this product.

Do not apply this product in a way that will contact workers or others, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI). For all crops on this label the REI is 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves made of any waterproof material, shoes plus socks and protective eyewear.

PHYSICAL AND CHEMICAL HAZARDS

Do not use or store near heat or open flame.

STORA

Do not contaminate water, food, or feed by PESTICIDE STORAGE: Do not store near to freeze, remix before using.

PESTICIDE DISPOSAL: Wastes resulting approved waste disposal facility.

CONTAINER DISPOSAL: Non-refillable container. Offer for recycling, if available. To emptying.

Non-refillable container (<5 gallons): equipment or a mix tank. Fill the container in its side and roll it back and forth, ensuring tanner on its end and tip it back and forth back and forth several times. Empty the remaining use or disposal. Repeat this procedure.

Pressure rinse as follows: Empty the remaining equipment or a mix tank and rinse the container, and rinse at about 40 PSI to drip.

Refrigerator (250 gallon & bul) tainer for any other purpose. Cleaning the disposing of the container. Cleaning before

GENE

DOUBLE UP® B+D is formulated as an emulsifiable concentrate with the equivalent of 2 pounds of bromoxynil per gallon of 1.9 pounds per gallon.

DOUBLE UP® B+D is a selective postemergence herbicide for use on small grain, barley, oats, rye and triticale.

DOUBLE UP® B+D is little residual activity initial treatment. Generally crops that form a mixture of crops or short-straw varieties, such as forage grasses. Mixtures of crops with a mixture of crops or short-straw varieties, such as forage grasses.
STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Do not store near fertilizers or seeds. Store at temperatures above 32°F. If allowed to freeze, remix before using.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Non-refillable containers (1, 2.5, 30 & 55 gallon): Do not reuse or refill this container. Offer for recycling, if available. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Non-refillable container (<5 gallons): Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Non-refillable container (>5 gallons): Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Refillable container (250 gallon & bulk): Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

GENERAL INFORMATION

DOUBLE UP® B+D is formulated as an emulsifiable concentrate of octanoic acid ester of bromoxynil containing the equivalent of 2 pounds of bromoxynil per gallon and 2,4-Dichlorophenoxyacetic acid containing the equivalent of 1.9 pounds per gallon.

DOUBLE UP® B+D is a selective postemergence herbicide for control of important broadleaf weeds infesting small grains, wheat, barley, oats, rye, and triticale. Optimum weed control is obtained when DOUBLE UP® B+D is applied to actively growing weed seedlings. DOUBLE UP® B+D contains a contact herbicide and a systemic herbicide; therefore, thorough coverage of the weed seedlings is essential for optimum control.

DOUBLE UP® B+D has little residual activity. Therefore, subsequent flushes of weeds will not be controlled by the initial treatment. Generally, crops that form a good canopy will help shade subsequent weed flushes. However, certain crops or short-straw varieties, for example Vascora Rojo wheat, may not develop the crop canopy fast enough to shade the subsequent flushes of weeds.

GRO

Use a standard herbicide boom sprayer that is equipped with screens no finer than 50 mesh. Select a spray volume and delivery system that is appropriate to the spray distribution and thorough coverage, e.g. 40-60 psi are recommended. Other nozzles may not provide adequate coverage. Flood nozzles are recommended as we move in general, a spray volume of 10 to 20 gallons minimum of 5 gallons per minute spray is used with higher speed, lower volume ground spray distribution. When using higher speed conditions cause excessive boom movement. Applications made when dry, dustless field conditions. Applications using less than 10 gallons per minute are recommended. When weed infestations are heavy, use of a uniform weed cover. When corn or grain nozzle should be used to obtain uniform coverage. Consult your local extension service. Do not apply when winds are gusty or when movement.

USE

Avoid use of small diameter spray nozzles. Keep sprayer, tomatoes, beans, sugarbeets, sunflower spray at all in the vicinity near susceptible plants of herbicides. State agricultural authorities in that the use of this product conforms to all local regulations. If tank mixing, a compatibility test is recommended. Use a small container and mix a small amount of the test mixture, to find the most compatible solution. If any indication of compatibility or incompatibility, use a different herbicide or different spray solution. Use uniform coverage. Generally, the use of this product conforms to all local regulations. The use of this product conforms to all local regulations. The use of this product conforms to all local regulations. The use of this product conforms to all local regulations. The use of this product conforms to all local regulations. The use of this product conforms to all local regulations.
GROUND APPLICATION

Use a standard herbicide boom sprayer that provides uniform and accurate application. Sprayer should be equipped with screens no finer than 50 mesh in the nozzle tips and in-line strainers.

Select a spray volume and delivery system that will ensure thorough and uniform spray coverage. For optimum spray distribution and thorough coverage, use of flat fan nozzles (maximum tip size 8006) with a spray pressure of 40–60 psi are recommended. Other nozzle types and lower spray pressures that produce coarse spray droplets may not provide adequate coverage of the weeds to ensure optimum control. Raindrop® nozzles and flood nozzles are not recommended as weed control with DOUBLE UP® B+D may be reduced.

In general, a spray volume of 10 to 20 gallons per acre (GPA) is recommended for optimum spray coverage. A minimum of 5 GPA with a minimum spray pressure of 50 psi and a maximum ground speed of 10 mph may be used with higher speed, low volume ground application if ground terrain, crop and weed density allow effective spray distribution. When using higher speed equipment, a maximum ground speed of 10 mph is suggested if field conditions cause excessive boom movement during application which results in poor spray coverage. Ground applications made when dry, dusty field conditions exist may provide reduced weed control in wheel track areas. Applications using less than 10 gallons per acre may result in reduced weed control.

When weed infestations are heavy, use of higher spray volumes and spray pressure will be helpful in obtaining uniform weed coverage. When corn or grain sorghum are large enough to interfere with the spray pattern, drop nozzles should be used to obtain uniform weed coverage. If you are unsure of the infestation level or size of crop, consult your local extension service.

Do not apply when winds are gusty or when other conditions favor poor spray coverage and/or off-target spray movement.

USER PRECAUTIONS

Avoid use of small diameter spray nozzles. Avoid spray drifts onto susceptible plants such as vegetables, flowers, tomatoes, beans, sugar beets, sunflowers, and other legumes. Coarse sprays are less likely to drift. Do not spray at all in the vicinity near susceptible plants to prevent any vapor drift. Local conditions may affect the use of herbicides. State agricultural authorities in many states issue recommendations to fit local conditions. Be sure that the use of this product conforms to all applicable conditions.

If tank mixing, a compatibility test is recommended to ensure satisfactory spray preparation. To test for compatibility, use a small container and mix a small amount (0.5 to 1 quart) of spray combining all ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, do not use this mixture for spraying. Indications of incompatibility usually will appear within 5 to 15 minutes after mixing. To ensure maximum crop safety and weed control, follow all cautions and limitations on this label and the labels of products used in the tank mixture.

AERIAL APPLICATION

Use orifice discs, cores and nozzle types and arrangements that will provide for optimum spray distribution and maximum coverage. In general a minimum spray volume of 5 GPA and a maximum pressure of 40 psi are recommended.

Do not apply during inversion conditions, when winds are gusty or when other conditions favor poor spray coverage and/or off-target spray movement. Off-target spray movement can be minimized by increasing the spray volume per acre and not applying when winds exceed 10 mph.
SPRAY DRIFT

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, relative humidity) and method of application (e.g., ground, aerial, airblast, chemigation) can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Droplet Size

When applying sprays that contain 2,4-D as the sole active ingredient, or when applying sprays that contain 2,4-D mixed with active ingredients that require a Coarse or coarser spray, apply only as a Coarse or coarser spray (ASAE standard 572) or a volume mean diameter of 385 microns or greater for spinning atomizer nozzles.

When applying sprays that contain 2,4-D mixed with other active ingredients that require a Medium or more fine spray, apply only as a Medium or coarser spray (ASAE standard 572) or a volume mean diameter of 300 microns or greater for spinning atomizer nozzles.

Wind Speed

Do not apply at wind speeds greater than 15 mph. Only apply this product if the wind direction favors on-target deposition and there are not sensitive areas (including, but not limited to, residential areas, bodies of water, known habitat for nontarget species, nontarget crops) within 250 feet downwind. If applying a Medium spray, leave one swath unsprayed at the downwind edge of the treated field.

Temperature Inversions

If applying at wind speeds less than 3 mph, the applicator must determine if: a) conditions of temperature inversion exist, or b) stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

Susceptible Plants

Do not apply under circumstances where spray drift may occur to food, forage, or other plantings that might be damaged or crops thereof rendered unfit for sale, use or consumption. Susceptible crops include, but are not limited to, cotton, okra, flowers, grapes (in growing stage), fruit trees (foliage), soybeans (vegetative stage), ornamentals, sunflowers, tomatoes, beans, and other vegetables, or tobacco. Small amounts of spray drift that might not be visible may injure susceptible broadleaf plants.

Other State and Local Requirements

Applicators must follow all state and local pesticide drift requirements regarding application of 2,4-D herbicides. Where states have more stringent regulations, they must be observed.

Equipment

All aerial and ground application equipment must be properly maintained and calibrated using appropriate carries or surrogates.

The boom length must not exceed 75% of the wingspan or 80% of the rotor blade diameter.

Release spray at the lowest height consistent with efficacy and flight safety. Do not release spray at a height greater than 10 feet above the crop canopy unless a greater height is required for aircraft safety. This requirement does not apply to forestry or rights-of-way applications.

When applications are made with a crosswind, the swath will be displaced downwind. The applicator must compensate for this by adjusting the path of the aircraft upwind.

Do not apply with a nozzle height greater than 4 feet above the crop canopy.

2,4-D esters may volatilize during conditions of low humidity and high temperatures. Do not apply during conditions of low humidity and high temperatures.

FOR THE CONTROL OF LISTED BROADLEAF

Use 3/4 to 2 pints of this herbicide per acre in usually 10–20 gallons per acre by ground equipment. Do not apply to cereal grains from the fully tillered stage of growth. GW1 pigweed and wild buckwheat. Use the 2 pints under cool dry conditions. Heavy weed population

This product controls the following weeds: n gumweed, pigweed, ragweed, wild buckwheat, smartweed, lamb'squarter and other broadleaf weeds whichever comes first.

RESTRICTIONS AND PRECAUTIONS

• Do not permit dairy animals or meat animals 45 days after treatment.
• Do not apply when crop canopy covers the
• Do not apply when crops are under moisture
• Reduced weed control may occur when weed
• Do not plant rotational crops within 30 days
• Limited to 1.75 lbs. ae per acre per crop cycle
• Do not feed treated straw to livestock.

The preharvest interval (PHI) is 14 days.

Postemergence:

• Limited to one postemergence application per

Preharvest:

• Limited to one preharvest application per crop
• Maximum of 2 pints/acre per application.
FOR THE CONTROL OF LISTED BROADLEAF WEEDS IN WHEAT, BARLEY, OATS, TRITICALE AND RYE
Use 3/4 to 2 pints of this herbicide per acre in enough spray volumes to provide uniform coverage of weeds, usually 10–20 gallons per acre by ground equipment and 5 gallons by aircraft. Application should be made to cereal grains from the fully tillered stage of growth but before the jointing stage. Use the 2 pints rate for mustards, pigweed and wild buckwheat. Use the 2 pints rate for kochia and tanax mustard or when weeds are growing under cool conditions. Heavy weed populations require a higher rate and complete spray coverage.

This product controls the following weeds: mustards, frenchweed, nightshade, arrowweed, field bindweed, gumweed, pigweed, rapeweed, wild buckwheat, plantain, sunflower, canola, cow cockle, Russian thistle, annual smartweed, lambsquarter and other broadleaf weeds. Apply to weeds up to the 4-leaf stage or 2 inches in height, whichever comes first.

RESTRICTIONS AND PRECAUTIONS

- Do not permit dairy animals or meat animals being finished for slaughter to forage treated grain fields within 45 days after treatment.
- Do not apply when crop canopies cover the weeds as poor weed control will result.
- Do not apply when crops are under moisture stress.
- Reduced weed control may occur when weeds are stressed from lack of moisture or cold temperatures.
- Do not plant rotational crops within 30 days following application.
- Limited to 1.75 lbs. as per acre per crop cycle.
- Do not feed treated straw to livestock.

The preharvest interval (PHI) is 14 days.

Postemergence:
- Limited to one postemergence application per crop cycle. Maximum of 5 pints/acre per application.

Preharvest:
- Limited to one preharvest application per crop cycle.
- Maximum of 2 pints/acre per application.

CONDITIONS OF
AND LIMITATIONS

Read the Conditions of Sale – Warranty or product. If the terms are not acceptable, it will be refunded.

The directions on this label are believed to be reliable and/or injury to the crop to which the product is applied and/or injury to the crop to which the product is to be applied.

The control of Helena Chemical Company (the “Company”) is warranted only if the chemical description on the label and is rejected to the factors noted above which are beyond the reasonable control of Helena Chemical Company (the “Company”).

The exclusive remedy against the Company shall be limited to, at Helena Chemical Company’s option:
1. Refund of the purchase price paid by the buyer.
2. Replacement of the product used.

To the extent allowed by law, the Company shall be liable for special, indirect, incidental, or consequential losses or damages (including, without limitation, loss of profit or income). The Company is subject to the foregoing conditions of sale and limitations.

CONDITIONS OF SALE – LIMITED WARRANTY AND LIMITATIONS OF LIABILITY AND REMEDIES

Read the Conditions of Sale – Warranty and Limitations of Liability and Remedies before using this product. If the terms are not acceptable, return the product, unopened, and the full purchase price will be refunded.

The directions on this label are believed to be reliable and should be followed carefully. Insufficient control of pests, weeds or insects to the crop to which the product is applied may result from the occurrence of extraordinary or unusual weather conditions or the failure to follow the label directions or good application practices, all of which are beyond the control of Helena Chemical Company (the “Company”) or seller. In addition, failure to follow label directions may cause injury to crops, animals, man or the environment. The Company warrants that this product conforms to the chemical description on the label and is reasonably fit for the purpose referred to in the directions for use subject to the factors noted above which are beyond the control of the Company. The Company makes no other warranties or representations of any kind, express or implied, concerning the product, including no implied warranty of merchantability or fitness for any particular purpose, and no such warranty shall be implied by law.

The exclusive remedy against the Company for any cause of action relating to the handling or use of this product shall be limited to, at Helena Chemical Company’s election, one of the following:
1. Refund of the purchase price paid by buyer or user for product bought, or
2. Replacement of the product used.

To the extent allowed by law, the Company shall not be liable and any and all claims against the Company are waived for special, indirect, incidental, or consequential damages or expense of any nature, including, but not limited to, loss of profits or income. The Company and the seller offer this product and the buyer and user accept it, subject to the foregoing conditions of sale and limitation of warranty, liability and remedies.
