PROTECTIVE PRECAUTIONS

KEEP OUT OF REACH OF CHILDREN
SAFETY DATA SHEET

Application Method and Timing

User Safety Recommendations

1. Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, for nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and any other warnings, cautions, or extraordinary precautions stated on this label.

2. Consult your local Valent Agricultural Specialist (1-800-6-VALENT), for specific information regarding the use of this product.

IMPORTANT: Before application, read and follow the entire label of the chemical (Mix and Apply only on crops listed on the label).

Consult your local Valent Agronomist (1-800-6-VALENT), for specific information regarding the use of this product in your particular environment.

Use or application rates specified cannot be guaranteed if a drift or other environmental condition is not met during use. NOTE: Do not apply more than 320 oz of MaxCel (20 pints) per acre per season only to one-year-old wood.

At the point where branching occurs but before shoots emerge.

Apply in the spring when terminal buds begin to swell but before shoots have emerged

For increasing lateral growth, improve branch angles, and provide a base for bearing.

For early cropping.

Do not exceed 50 fluid ounces of MaxCel per 100 gallons of spray required to obtain given ppm concentrations.

Do not contaminate water, food, or feed by storage or disposal.

Do not use sufficient volume to ensure complete tree coverage.

Do not apply after bud break. Applications after buds have broken will reduce alternate bearing.

Any type of application of MaxCel to non-bearing pears and non-bearing sweet cherries has a one year pre-harvest interval.

Do not tank mix with streptomycin or apply streptomycin on the same day.

Timing of the second to fourth sprays should be when the leader adds five inches of new growth after the last spray (about every 7 - 10 days).

Best results are obtained when applied in the morning when temperatures are cooler. Avoid spraying in the afternoon.

NOTE: that point.
maxCel®
Plant Growth Regulator Solution

For Use on Apple, Pear, Pistachio and Non-Bearing Trees

ACTIVE INGREDIENT:
6-benzyladenine ........................................ 1.9%
