This product is highly toxic to aquatic life. Do not apply directly to water, to areas where surface water is present, or to tidal areas. Apply this product only as specified on the label.Exposures can occur to non-target aquatic life in or near the treated areas when applying the product only as specified on the label. Do not treat soil that is under cultivation or hay. Do not treat soil that is under irrigation.
Stop - Read the label before use. Keep out of reach of children. **CAUTION**

**PARAEL USUARIO:** Si usted no lee o entendiera ingles, no use este producto hasta que le hayan explicado completamente las instrucciones de uso.

**(TO THE USER): If you cannot read or understand English, do not use this product until the label has been fully explained to you.**

**FOR MEDICAL AND TRANSPORTATION USE ONLY 24 Hours a Day 1-800-331-2867**

**FIRST AID**

If swallowed:
- Call a poison control center or doctor for treatment advice.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If on Skin or in Eyes:
- Wash immediately with plenty of soap and water for 15 to 20 minutes.
- Hold eyelids open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses (if worn) after the first 10 minutes and continue rinsing eyes.
- Call a poison control center or doctor for treatment advice.

**NOT FOR HUMAN USE.** No specific antidotes are available. Treat patient symptomatically.

**PRECAUTIONARY STATEMENTS**

**Hazard Statements**
- **H228:** Causes severe skin irritation.
- **H330:** May cause sensitization by skin contact.
- **H331:** May cause sensitization by inhalation.
- **H332:** May cause sensitization by eye contact.
- **H341:** Causes serious eye damage.
- **H319:** Causes serious eye irritation.
- **H315:** Causes skin irritation.
- **H319:** Causes serious eye damage.
- **H400:** Very toxic to aquatic life.
- **H410:** Very toxic to terrestrial arthropods and other invertebrates.
- **H411:** Very toxic to birds.
- **H420:** Very toxic to fish.
- **H410:** Very toxic to aquatic invertebrates.
- **H315:** Causes skin irritation.

**Environmental Hazards**
- **G1**
- **G2**
- **G3**
- **G4**

**Inhalation:**
- Avoid prolonged or repeated exposure to dusts or gases.

**Reactive:**
- Do not mix with or near sodium hypochlorite solutions.

**Other Information:**
- Do not contaminate water sources.
- Do not contaminate food or feed by applying at too high a rate.

**USE:**
- For use by individuals/firms licensed or registered by the state to apply termite control products.
- States may have more restrictive or different regulations prior to use of this product.
- For use by individuals/firms licensed or registered by the state to apply termite control products. State may have more restrictive or different regulations prior to use of this product.
- For use by individuals/firms licensed or registered by the state to apply termite control products. State may have more restrictive or different regulations prior to use of this product.
**EXTERIOR PERIMETER TREATMENT**

It is required that all accessible areas of the structure are treated. Trenching is required to protect building voids by treating structural elements in this area. All accessible areas, including by but not limited to the foundation walls, exterior building voids and water-related structures, are subject to treatment. Water-related structures include 1. OUTER FOUNDATION WALKS: Application of Premise 75 against any form of application leakage in the treated areas. Some areas may not be treatable or may require mechanical alteration prior to treatment. All leaks section(s) of this label appropriate to the element of construction, FOAM APPLICATIONS or CONTROL OF WOOD INFESTING PESTS for detailed directions on any of these treatment procedures.

- **Solution volume:** Apply a solution of Premise 75 Insecticide In Water Soluble Packets (see APPLICATION VOLUME) per 10 linear feet, per foot of depth to provide a uniform application to all soil in crawlspaces, and other similar voids.

**MIXING TABLE FOR Premise 75 Insecticide In Water Soluble Packets**

**Do not allow people or pets to contact or to be in the contaminated areas of the structure until the clean up is complete.**

**RECOMMENDATIONS**

- Where direct access to soil on the outer foundation wall is impossible due to attached porches, entrance platforms, garages and similar surface structures, application to the soil may be made by trenching and rodding, or by injecting the soil as previously described for soil applications. Add the manufacturer’s specified volume of foam tool to produce foam of the desired expansion ratio. Aireal Nests: If ant nests are located in tree hollows or non-structural wooden construction (e.g., posts, fences, deck) treat the interior cavity and/or exteriors of these structures. For control of ants in houses and other structures, a 0.05 to 0.1% solution as a spray to all surfaces, cracks, crevices, and in areas of knows or suspected activity at or near the exterior of the structure. CorrectALL RETREATMENT:

- Do not apply at a lower dosage and/or concentration than specified on this label.

**Do not apply to any soil or masonry construction.**

- Do not apply in or near water bodies, wetlands, watercourses, and other similar water bodies. Do not contaminate water, food, or feed by storage, disposal.
Do not give anything by mouth to an unconscious person.
• Call a poison control center or doctor for treatment advice.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Directions for use
It is the responsibility of the consumer to use this product in such a manner that the treated area is protected from weather, and other conditions that may reduce the effectiveness of the treatment. Precautions and restrictions are based on the labeling of the product. It is the responsibility of the consumer to use the product in a manner consistent with the labeling. It is the responsibility of the consumer to use the product in a manner consistent with the labeling.

MIXING TABLE FOR PREMISE® 75 INSECTICIDE IN WATER SOLUBLE PACKETS

Mixing: Refer to your premix label for proper adjustment of Premise 75 Insecticide in Water Soluble Packets. Within each envelope are clear inner packets containing Premise 75 Insecticide in Water Soluble Packets. The clear inner packet is water-soluble. Do not allow packets to become wet prior to adding the spray in water. Do not handle the clear inner packets with hands or wet gloves. Rusty or damaged packets may result in bacterial growth. Solutions used for potable water treatment may be used for irrigation or as a water treatment at a water treatment plant. The solution may be baked or fried for the desired temperature of the water treatment plant. Do not wash the hands after handling a solution containing premix.

At the initial application of the control of subterranean termites, drywood termites, dampwood termite, carpenter ants, and other wood-destroying insects.

ACTIVE INGREDIENTS

methoprene 75% (100,000 IU/gram)

INERT INGREDIENTS

75%

Stop - Read the label before use. Keep out of reach of children.

CAUTION

For the inner packet to dissolve completely.

Do not use for irrigation or as a water treatment at a water treatment plant. The solution may be baked or fried for the desired temperature of the water treatment plant. Do not wash the hands after handling a solution containing premix.

CAUTION

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if swallowed, inhaled, or absorbed through skin. Causes eye irritation. Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor.

Stop - Read the label before use.  
Keep out of reach of children.

TOPIC TO USER: If you cannot read or understand English, do not use this product until the label has been fully explained to you.

INSTRUCTIONS FOR USE

FIRST AID

If swallowed:
• Call a poison control center or doctor immediately for treatment advice.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.
• Rinse mouth and gargle

If inhaled:
• Move victim to fresh air
• Call a poison control center or doctor immediately for treatment advice

If on the skin:
• Wash all affected areas with soap and water
• Take off contaminated clothing

If on the eyes:
• Rinse eyes immediately with plenty of water for 15 to 20 minutes
• Hold eyelids open and rinse slowly and gently with water for 15 to 20 minutes
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye

NOTICE TO PHYSICIAN: No specific antidote is available. Treat patient symptomatically.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Structures that contain wells or cisterns within the foundation of the structure can only be treated using the treated backfill method described in the treatment around wells and columns section of this label. Consult state and local specifications for specified distances of treated wells or areas from, or any regulations do not need, refer to Federal Housing Administration Specifications (FHA) for guidance.

MIXING TABLE FOR PREMISE 75 INSECTICIDE IN WATER SOLUBLE PACKETS

<table>
<thead>
<tr>
<th>Gallons of Finished Solution</th>

<td>12</td>
</tr>
<tr>
<td>4</td>
<td>16</td>
</tr>
</tbody>
</table>

MIXING: Refer to package amount of Premise 75 Insecticide in Water Soluble Packets to be used.

Within each foil envelope are clear inner packets containing Premise 75 Insecticide in Water Soluble Packets. The clear inner packet is water soluble. For use of lead or sheet lead, do not apply to areas where liquid will be absorbed by the sheet lead. The use of a sprayer, mixer, or other devices to increase the rate of solution will result in the rate of solution being increased.

APPLICATION OF SOLUTION

Do not apply at a lower volume rate than specified or as directed on the label for application prior to installation of the finished grade.

CONCRETE SLAB-ON-GROUND OR BASEMENTS: Apply an overall treatment to the entire surface of soil or other substrates to be covered by the slab in accordance with the normal procedures for concrete sidewalks, basement floors, and patio slabs. Avoid application of solution to areas of excessively high alkalinity and uniformly coat 10 square feet of treatment area with Premise 75 Insecticide in Water Soluble Packets per linear foot of treatment edge. Avoid application of solution in areas where the soil or surface is excessively loose or unstable.

CONTROL

For control of subterranean termite, drywood termite, dampwood termite, dampwood ants, and other wood-destroying insects.

ACTIVE INGREDIENT

- 75% Nitenpyram (Nitenpyram)-N-tert-butyl-2-oxazolidinone

INERT INGREDIENTS

- 25% Nitenpyram (Nitenpyram)-N-tert-butyl-2-oxazolidinone

Do Not Remove Packets From Container Except For Immediate Use.

For use by individuals/fores licensed or registered by the state to apply termite products. States may have more restrictive requirements that do not allow certain applications of products using this. Consult the structural pest control regulatory agency of your state prior to use of this product.

For the control of subterranean termite, drywood termite, dampwood termite, dampwood ants, and other wood-destroying insects.

PREFERRED USES

This insecticide is designed for the control of subterranean termite, drywood termite, dampwood termite, dampwood ants, and other wood-destroying insects. This insecticide is intended for applications of site and area around the finished grade. Prior to each application, applicators must notify the general contractor, construction supervision, or site responsible, the intended termite application and intended site of application and instruct the responsible person to notify construction workers and other individuals to leave the premises during the treatment and during the 48 hour period immediately following the treatment.

Prior to application, applicators must not self-terminate the field grade. Prior to each application, applicators must not self-terminate the field grade. Prior to each application, applicators must notify the general contractor, construction supervision, or site responsible, the intended termite application and intended site of application and instruct the responsible person to notify construction workers and other individuals to leave the premises during the treatment and during the 48 hour period immediately following the treatment.

CONCRETE SLAB-ON-GROUND OR BASEMENTS: Apply an overall treatment to the entire surface of soil or other substrates to be covered by the slab in accordance with the normal procedures for concrete sidewalks, basement floors, and patio slabs. Avoid application of solution to areas of excessively high alkalinity and uniformly coat 10 square feet of treatment area with Premise 75 Insecticide in Water Soluble Packets per linear foot of treatment edge. Avoid application of solution in areas where the soil or surface is excessively loose or unstable.

CONTROL

For control of subterranean termite, drywood termite, dampwood termite, dampwood ants, and other wood-destroying insects. This insecticide is designed for the control of subterranean termite, drywood termite, dampwood termite, dampwood ants, and other wood-destroying insects. This insecticide is intended for applications of site and area around the finished grade. Prior to each application, applicators must notify the general contractor, construction supervision, or site responsible, the intended termite application and intended site of application and instruct the responsible person to notify construction workers and other individuals to leave the premises during the treatment and during the 48 hour period immediately following the treatment.

Prior to application, applicators must not self-terminate the field grade. Prior to each application, applicators must notify the general contractor, construction supervision, or site responsible, the intended termite application and intended site of application and instruct the responsible person to notify construction workers and other individuals to leave the premises during the treatment and during the 48 hour period immediately following the treatment.

Stop - Read the label before use. Keep out of reach of children.

PARA EL USUARIO: Si usted no le e indica en la etiqueta, no use este producto hasta que le hayan explicado completamente las instrucciones.

(TO THE USER: If you cannot read or understand English, do not use this product until the label has been fully explained to you.)

MIXING TABLE FOR PREMISE ’75 INSECTICIDE IN WATER SOLUBLE POUCHES

<table>
<thead>
<tr>
<th>Gallons of Finished Solution</th>
<th>Number of Premise ’75 Pouches Needed</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.5% Concentrate</td>
<td>0.75% Concentrate</td>
</tr>
<tr>
<td>0.5</td>
<td>1</td>
</tr>
</tbody>
</table>

MIXING: Refer to the mixing table to obtain the proper amount of Premise ’75 Insecticide in Water Soluble Pouches. Within each foil envelope are clear inner pouches containing Premise ’75 Insecticide in Water Soluble Pouches. The clear inner packet is water soluble. Do not allow products to become wet prior to adding the spray solution. Set the pouch clear inner packets with pouch and are wet gloves. Remove any excess water or wetting agent by brushing the spray mist away. Do not set the pouch together in a pan, or any container where the amount of water used to dissolve the insecticide is likely to occur.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Structures that contain water wells or cisterns, as well as those in which the structure can only be treated using the labeled method described in the treatment around wells and cisterns section of this label, must be treated as separate units. All state and local specifications for specified distances of treated wells or treated areas, if any, regulations do not exist, refer to Federal Housing Administration Specifications (FHIC) for guidance.

CONCLUSION

Application of the product is to the surface area of the structure in the manner described in the application instructions. Use of the chemical as a soil dust is not permitted. Note that spraying on the outside of the structure or the area to be treated during application and until the termicide is absorbed into the soil.

Do not apply Premise ’75 Insecticide in Water Soluble Pouches with or in a tank that may contain barium or release free chlorine. The reaction of PHA and barium or chlorine is a plastic which is not soluble in water or other substances such as oil, grease, and wax. Use of an antioxidant water stabilizer is recommended.

APPLICATION VOLUME

The application volume specified in the Premise ’75 Insecticide in Water Soluble Pouches “SPECIAL USES” are to be used whenever possible. However, where soil conditions will not accept application of 4 gallons of Premise ’75 Insecticide in Water Soluble Pouches per 10 linear feet, the application volume specified for solution of 0.5% and 0.75% concentration may be a maximum of 0.5 liters/150 square feet. This equals approximately 150 square feet of solution to be applied in 4 gallons of water, then 2 gallons of water may be used per 10 linear foot to deliver an equivalent amount of Premise ’75 Insecticide in Water Soluble Pouches per unit of soil.

CONTROL

For subterranean termite control, the termite control process, approved practices, and practices for uniform treatment of entire structures are established to a continuous treated zone. Such standards as the industry or other methods, such as those in the structural treatment process, and industry standards for subterranean termite control may vary from regulations, treatment procedures, soil types, construction practices and other factors. The purpose of chemical treatment for termite control is to establish a continuous chemical treated zone (horizontally and vertically) as described in the application rate for each of the structures. The chemical treated zone extends from the line of contact of the treated zone to the treated soil surface. The chemical treated zone is established using a 1% solution of Premise ’75 Insecticide in Water Soluble Pouches per unit of soil. The chemical treated zone is established using a 1% solution of Premise ’75 Insecticide in Water Soluble Pouches per unit of soil.

PRE-CONSTRUCTION TREATMENT

Do not apply Premise ’75 Insecticide in Water Soluble Pouches with or in a tank that may contain barium or release free chlorine. The reaction of PHA and barium or chlorine is a plastic which is not soluble in water or other substances such as oil, grease, and wax. Use of an antioxidant water stabilizer is recommended.

Prior to each application, applicators must notify the general contractor, construction supervision, or other responsible party, of the intended termite treatment.

Do not apply Premise ’75 Insecticide in Water Soluble Pouches with or in a tank that may contain barium or release free chlorine. The reaction of PHA and barium or chlorine is a plastic which is not soluble in water or other substances such as oil, grease, and wax. Use of an antioxidant water stabilizer is recommended.

Prior to each application, applicators must notify the general contractor, construction supervision, or other responsible party, of the intended termite treatment.
Stop - Read the label before use. Keep out of reach of children.

CAUTION

PARA EL USUARIO: Si usted no lee o entiende inglés, no use este producto hasta que le hayan explicado completamente las instrucciones de uso y seguridad.

HIGHLY HAZARDOUS

PREGUINOSA

This label must be cleaned up prior to leaving the application site. Do not allow people or pets to contact contaminated areas or to reoccupy treated areas until the label directions for use are followed. The label directions for use are intended to ensure that risks to human and environmental health are minimized to the extent possible. If you do not follow the label directions for use, you may increase the risks to human and/or environmental health.

WARNING

STORAGE AND DISPOSAL

• Do not induce vomiting unless told to do so by a poison control center or doctor.

• Check with local officials to determine the type of disposal facilities for empty containers.

• Do not contaminate water sources, wetlands, lakes, rivers, and streams with the active or inert ingredients of this product.

• Do not store near other food, feed, or pet products.

Preparation of application solution

1. Add 1 gallon of water per 10 linear feet of floor or wall to make an application for room corners, walls, and structural supports.

2. Mix the application solution according to the mixing table in the application section. Use the mixing table to calculate the application solution volume for the area to be treated.

3. For large areas, use a suitable equipment such as a water pressure washer, to make the application solution before adding the application solution to the treats zone.

4. The application solution must be applied in a total volume of 4 gallons of solution per 10 linear feet of the floor or wall to be treated. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.

5. The application solution must be applied in a total volume of 2 gallons of solution per 10 linear feet of the floor or wall to be treated.

6. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.

Application of application solution

1. Apply the application solution to the treated area by spraying or sprinkling the treated area with a fine mist. The treated area must be sprayed or sprinkled with a fine mist to ensure complete and uniform coverage.

2. Apply the application solution to the treated area by spraying or sprinkling the treated area with a fine mist. The treated area must be sprayed or sprinkled with a fine mist to ensure complete and uniform coverage.

3. The application solution must be applied in a total volume of 4 gallons of solution per 10 linear feet of the floor or wall to be treated. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.

4. The application solution must be applied in a total volume of 2 gallons of solution per 10 linear feet of the floor or wall to be treated. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.

5. The application solution must be applied in a total volume of 2 gallons of solution per 10 linear feet of the floor or wall to be treated. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.

6. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.

7. The application solution must be applied in a total volume of 4 gallons of solution per 10 linear feet of the floor or wall to be treated. The application solution must be applied in a total volume of 2 gallons of solution per 10 linear feet of the floor or wall to be treated. The application solution must be applied in a total volume of 1 gallon of solution per 10 linear feet of the floor or wall to be treated.
**EXTERNAL PERIMETER TREATMENT**

- Use the appropriate size and method of treatment recommended for the particular wood-to-soil contact areas. Perimeter treatments are effective in preventing insect and termite entry into structures. Apply a sufficient volume of Premise 75 Insecticide In Water Soluble Packets foam or alone in combination with liquid solution to provide a continuous treated zone at the specified rate for specific application sites. Use appropriate dispersion techniques and application methods for soils and foliar applications.

**MIXING TABLE FOR Premise 75 Insecticide In Water Soluble Packets Foam**

**TERMINAL TREATMENT OF INTERIOR SPOT TREATMENTS**

- Use a sufficient volume of Premise 75 Insecticide In Water Soluble Packets foam alone or in combination with liquid solution to provide a continuous treated zone at the specified rate for specific application sites. Use appropriate dispersion techniques and application methods for soils and foliar applications.

**CONTROL OF WOOD INSECT AND TERMITE PESTS**

- For all buildings, use a sufficient volume of foam or 0.05 to 0.1% solution per linear foot of depth. For all buildings, use a sufficient volume of foam or 0.05 to 0.1% solution per linear foot of depth. For all buildings, use a sufficient volume of foam or 0.05 to 0.1% solution per linear foot of depth.

**LIMITATIONS OF LIABILITY**

- The least expensive remedy for termite damage is the replacement of the wood. Termite damage to structural wood is not covered by this warranty. The warranty for termite damage to structural wood will not exceed the face value price paid for this product. The warranty is void if the building is not structurally sound or if the building is not properly maintained.

**DISCLAIMER OF WARRANTIES**

- This warranty is the only warranty given by Bayer CropScience LP with respect to this product and no other warranty, expressed or implied, extends beyond the statements contained herein. To the extent consistent with applicable law, Bayer CropScience LP disclaims any liability whatsoever for special, indirect, or consequential damages for any loss, injury, or damage caused by the use of this product. Bayer CropScience LP disclaims any liability whatsoever for special, indirect, or consequential damages for any loss, injury, or damage caused by the use of this product.
EXTERIOR PERMEATE TREATMENT

In situations where necessary, conventional application methods can be supplemented through use of foam generating equipment. The use of foam generating equipment will help to limit the spread of the treatment solution into soil and therefore reduce potential reinfestation by termite. For small trees (< 6 inches in diameter), apply 1 gallon of solution. For larger trees, apply 4 gallons per 10 linear feet (measured as the circumference at the root flare). For larger trees, apply 4 gallons per 10 linear feet (measured as the circumference at the root flare).

Foam and liquid applications must be consistent with volume and active ingredient instructions in order to ensure proper application has been made. Treatment of trees in black or rubber foundation walls must be closely examined. Applicators must inspect areas of possible reinfestation as a precaution against application leakage in the treated areas. Some areas may not be treated or may require mechanical alteration prior to treatment. All areas must be inspected to identify all appropriate locations using a foam application.

Aerial Nests: If ant nests are located in tree hollows or non-structural wooden construction (e.g.; posts, fences, decks) treat the interior cavity and/or the soil around the tree. Locate galleries by using visual signs (frass or pellets, blistered wood, etc.) and apply 1 gallon per tree.

RETAILPMENT

Do not store below freezing (32°F). Exposure to moisture or excessive handling of water soluble packets may cause breakage. Store water soluble packets in a cool, dry place.

Do not contaminate water, food, or feed by storage or disposal.

Application of foam must be made by an authorized foam application equipment authorized by the manufacturer. Application equipment must be used in accordance with the manufacturer’s instructions.

Retreatment: Treatment in areas may be retreated in accordance with application techniques described in this product's labeling. The timing and type of these retreatments will vary depending on factors such as termite pressure, soil types, and conditions that may affect the performance of the treated area. Do not perform treatment until the treated zone is at least five or more years old. When a structure is not known to be reinfested and the treated zone is not disturbed, but where the structure was last treated five or more years ago, treatment may be made as necessary. Do not formulate this product into other end-use products.

Do not apply or disperse residues in or on the immediate area during the application or contact treated areas until spray has dried. Interior applications may be made at any time. Do not allow pets to enter treated areas while treatment is taking place or until the spray has dried. Do not allow pets to enter treated areas until the spray has dried.

Annual retreatment of the structure is prohibited unless there is clear evidence of reinfestation or disruption of the treated zone due to construction, excavation, or landscaping and/or evidence of the existence of the termite infestation treated zone in the soil. The labeling reinfestation interval is 2 years. There may be circumstances where the reinfestation interval will be extended beyond the 2 year interval. The reinfestation interval may be extended beyond the 2 year interval if the treatment solution was not delivered to all appropriate locations (e.g., due to improper use or handling of the product).

Do not use the product against native or imported fire ants, pharaoh or harvester ants.

Do not use the product around the immediate area during the application or contact treated areas until spray has dried. Interior applications may be made at any time. Do not allow pets to enter treated areas while treatment is taking place or until the spray has dried. Do not allow pets to enter treated areas until the spray has dried.

Do not use this product for any other end-use products. Do not formulate this product into other end-use products.

PRECAUTIONS FOR APPLICATIONS

Do not store below freezing (32°F). Exposure to moisture or excessive handling of water soluble packets may cause breakage. Store water soluble packets in a cool, dry place.

Do not contaminate water, food, or feed by storage or disposal.

Storage and Disposal

Do not store water soluble packets in a cool, dry place to prevent reinfestation with other end-use products. Do not use this product around the immediate area during the application or contact treated areas until spray has dried. Interior applications may be made at any time. Do not allow pets to enter treated areas while treatment is taking place or until the spray has dried. Do not allow pets to enter treated areas until the spray has dried.

Do not use the product against native or imported fire ants, pharaoh or harvester ants.

Do not use the product around the immediate area during the application or contact treated areas until spray has dried. Interior applications may be made at any time. Do not allow pets to enter treated areas while treatment is taking place or until the spray has dried. Do not allow pets to enter treated areas until the spray has dried.

Do not use the product against native or imported fire ants, pharaoh or harvester ants.

Do not use the product around the immediate area during the application or contact treated areas until spray has dried. Interior applications may be made at any time. Do not allow pets to enter treated areas while treatment is taking place or until the spray has dried. Do not allow pets to enter treated areas until the spray has dried.

Do not allow pets to enter treated areas while treatment is taking place or until the spray has dried. Do not allow pets to enter treated areas until the spray has dried.
EXTERNAL PERIMETER TREATMENT

To ensure a long-term control of subterranean termite activity, it is required to do the following:
1. Ensure the perimeter is impenetrable by constructing a barrier zone.
2. Construct an underground barrier zone around the building structure.

UTILITY HOLE TREATMENTS

For any utility holes or other access points in the building, the following treatment should be performed:

• Use a pesticide solution that will fill the utility hole or access point.
• Ensure the area around the utility hole is properly sealed to prevent termite entry.

INDOOR TREATMENTS

For indoor treatments, the following steps should be taken:

• Apply the solution to accessible areas, such as walls, floors, and ceilings.
• Ensure proper ventilation of the treated areas.

Insecticide In Water Soluble Packets

Insecticide In Water Soluble Packets must be applied as a typical liquid treatment. The remaining 25% or less gallons are delivered to soil as an injection treatment. Do not apply at a lower dosage and/or concentration than specified on this label. If the treated zone is disturbed, the applicator should consider efficacy and/or degradation data and/or site-specific conditions and previous experience that may affect the performance of the termite control treatment.

For shallow foundations, one foot or less of depth, dig a trench to the footing or to a maximum depth of 4 feet. In the case of footings, treat soil beneath a footing as described in this product's labeling. The timing and type of these retreatments will vary depending on factors such as termite pressure, soil type, soil conditions and other factors which may reduce the effectiveness of the treated zone. The structure is to be retreated when the termite activity is located within an interior wall or structural member, the soil beneath the slab and the wall void at this location must be treated. Drill holes in the slab must be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches, to be treated. Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Interior applications should be performed at any time during the year. Do not use as a soil application to subterranean termites or for soil acaricidal or acaridical treatments.

IN TRICATE SPOT TREATMENTS

For intricate spot treatments, the following steps should be taken:

• Apply the solution to accessible areas, such as walls, floors, and ceilings.
• Ensure proper ventilation of the treated areas.

Insecticide In Water Soluble Packets must be applied as a typical liquid treatment. The remaining 25% or less gallons are delivered to soil as an injection treatment. Do not apply at a lower dosage and/or concentration than specified on this label. If the treated zone is disturbed, the applicator should consider efficacy and/or degradation data and/or site-specific conditions and previous experience that may affect the performance of the termite control treatment.

For shallow foundations, one foot or less of depth, dig a trench to the footing or to a maximum depth of 4 feet. In the case of footings, treat soil beneath a footing as described in this product's labeling. The timing and type of these retreatments will vary depending on factors such as termite pressure, soil type, soil conditions and other factors which may reduce the effectiveness of the treated zone. The structure is to be retreated when the termite activity is located within an interior wall or structural member, the soil beneath the slab and the wall void at this location must be treated. Drill holes in the slab must be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches, to be treated. Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Interior applications should be performed at any time during the year. Do not use as a soil application to subterranean termites or for soil acaricidal or acaridical treatments.

IN TERTIOR SPOT TREATMENT

For interior spot treatments, the following steps should be taken:

• Apply the solution to accessible areas, such as walls, floors, and ceilings.
• Ensure proper ventilation of the treated areas.

Insecticide In Water Soluble Packets must be applied as a typical liquid treatment. The remaining 25% or less gallons are delivered to soil as an injection treatment. Do not apply at a lower dosage and/or concentration than specified on this label. If the treated zone is disturbed, the applicator should consider efficacy and/or degradation data and/or site-specific conditions and previous experience that may affect the performance of the termite control treatment.

For shallow foundations, one foot or less of depth, dig a trench to the footing or to a maximum depth of 4 feet. In the case of footings, treat soil beneath a footing as described in this product's labeling. The timing and type of these retreatments will vary depending on factors such as termite pressure, soil type, soil conditions and other factors which may reduce the effectiveness of the treated zone. The structure is to be retreated when the termite activity is located within an interior wall or structural member, the soil beneath the slab and the wall void at this location must be treated. Drill holes in the slab must be spaced in a manner that will allow for a continuous chemical treated zone, not to exceed 12 inches, to be treated. Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Interior applications should be performed at any time during the year. Do not use as a soil application to subterranean termites or for soil acaricidal or acaridical treatments.
TREATMENT OF VOIDS IN BLOCK OR RUBBLE FOUNDATION WALLS must be closely examined. Applicators must inspect areas of possible runoff as a precaution. Solution per 10 linear feet to the lower part of the void so that it reaches the top of the footing or soil. Drill spacing in masonry voids must be at intervals treated. Spot treatment at the site(s) of termite activity must extend a minimum of 3 feet on both sides. Treat masonry voids by applying 2 gallons of solution. If termite activity is neither along the perimeter wall nor in a wall inaccessible to crawl spaces, areas with termite activity must be treated. Apply 4 gallons of solution (see APPLICATION VOLUME) per 10 linear feet to create a vertical treatment zone, which must extend a minimum of 3 feet on both sides of the infested area. Apply 4 gallons of solution per linear foot treated.

DO NOT MAKE TREATMENT UNITS, LOCATION OF HEAT OR COLORING DUCTS AND VENTS ARE KNOWN AND IDENTIFIED. USE EXTREME CAUTION TO INSURE THAT THE TREATMENT VOLUME IS NOT COMPROMISED. You must make sure that treatment is not applied to other than masonry voids, because this product is non-cellulose material or covered by an impermeable, non-cellulose material.

1. INDOOR SPOT TREATMENTS. Targeted treatments must be made to all known infested sites inside the structure. One or more of the following methods must be used to make targeted treatments:

- Sub-slab injections made through the slab at or near areas where termites are known to be entering the slab in the structure or where soil is known to be present. By using 4 gallons of solution per 10 linear feet, it is possible to inject the soil up to the top of the footing or a minimum of 4 feet deep. Soil that is known to be present must be treated. Proprietary methods for this application are commercially available and should be used.
