DuPont™ Basis Gold®

herbicide

“......... A Growing Partnership With Nature”
DUPONT™ BASIS GOLD®
HIGHLIGHTS

- BASIS GOLD® provides selective postemergence grass and broadleaf weed control in field corn.
- Apply at a rate of 14 oz per acre. One 17.5 lb bag will treat 20 acres.
- Include an adjuvant as recommended in this label. The use of nitrogen fertilizer is required in addition to the use of a crop oil concentrate or non-ionic surfactant. See SPRAY ADDITIVES.
- BASIS GOLD® may be applied by ground (broadcast or band) only. Aerial applications are prohibited.
- BASIS GOLD® may be tankmixed with other herbicides for increased postemergence control of grass and broadleaf weeds and extended residual control of later emerging grasses.
- For ground application, apply in a minimum of 15 gal of water at 20-40 PSI using flat fan nozzles for best results.
- Apply to actively growing grass and broadleaf weeds at the recommended sizes. See RATE.
- Applications to grass and broadleaf weeds or corn under stress may affect the performance of BASIS GOLD® or in some cases reduce crop tolerance. See ENVIRONMENTAL CONDITIONS.
- Consult label text for complete instructions. Always read and follow label directions for use.

**RESTRICTED USE PESTICIDE**

For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator’s certification.

This product is a restricted use herbicide due to ground and surface water concerns. Users must read and follow all precautionary statements and instructions for use in order to minimize potential for atrazine to reach ground and surface water.

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

**PRECAUTIONARY STATEMENTS**

**HAZARD TO HUMANS**

Caution. Harmful if swallowed, inhaled or absorbed through skin. Causes moderate eye irritation. Do not breathe dust or spray mist. Avoid contact with eyes, skin or clothing.

**FIRST AID**

**IF SWALLOWED:**

- Call poison control center or doctor immediately for treatment.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by the poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

**IF ON SKIN OR CLOTHING:**

- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

**IF INHALED:**

- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
- Call a poison control center or doctor for further treatment advice.

**IF IN EYES:**

- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing the eye.
- Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-441-3637 for emergency medical treatment information.

**Note to physician:** There is no specific antidote for atrazine. If this product is ingested, induce emesis or lavage stomach. The use of an aqueous slurry of activated charcoal may be considered.

**PRECAUTIONARY STATEMENTS**

(continued on next page)
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This labeling must be in possession of the user at the time of pesticide application. Do not apply this product in a way that contacts workers or others, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls.
- Chemical Resistant Gloves Category A (such as butyl rubber, natural rubber, neoprene rubber, or nitrile rubber) ≥14 mils.
- Chemical resistant footwear plus socks.

DuPont™ BASIS GOLD® must be used only in accordance with recommendations on this label or in supplemental DuPont publications. DuPont will not be responsible for losses or damage resulting from use of this product in any manner not specifically recommended by DuPont.

**GENERAL INFORMATION**

BASIS GOLD® herbicide is a water-dispersible granule containing 89.46% active ingredient by weight.

BASIS GOLD® is a selective herbicide for control of certain grasses and broadleaf weeds when applied postemergence to field corn. Make only one BASIS GOLD® application per season.

Aerial application is prohibited.

Maximum Broadcast Rates for Atrazine

- If no atrazine was applied prior to corn emergence, apply a maximum of 2 lb ai/A broadcast. If a postemergence treatment is required following an earlier herbicide application, the total atrazine applied may not exceed 2.5 lb ai/A per calendar year.
- 2.0 lb ai/A as a single preemergence application on soils (as defined by the Natural Resource Conservation Service) that are not highly erodible or on highly erodible if at least 30% of the soil is covered with plant residues, or
- 1.6 lb ai/A as a single preemergence application on highly erodible soils (as defined by the Natural Resource Conservation Service) if <30% of the surface is covered with plant residues, or 2.0 lb ai/A if only applied postemergence.
- If no atrazine was applied prior to corn emergence, apply a maximum of 2 lb ai/A broadcast.

When tank-mixing or sequentially applying atrazine or products containing atrazine to field corn, the total pounds of atrazine applied (lbs a.i./A) must not exceed a maximum of 2.5 pounds active ingredient per year.

**WHEN TO APPLY**

**TIMING TO CROP STAGE**

Apply BASIS GOLD® to corn that is up to 12 inches tall and exhibiting up to and including 6 leaf-collar(s). Do not apply to corn taller than 12 inches or exhibiting more than 6 leaf-collar(s), whichever is the more restrictive. A 60 day PHI applies for field corn forage use.

Apply BASIS GOLD® to field corn hybrids with a relative maturity (RM) rating of 77 days or more, including "food grade" (yellow dent, hard endosperm), waxy and DuPont Optimum High-Oil corn. Not all field corn hybrids of less than 77 days RM, not all white corn hybrids nor Hi-Lysine hybrids have been tested for crop safety, nor does DuPont have access to all seed company data. Consequently, injury arising from the use of BASIS GOLD® on these types of corn is the responsibility of the user. Consult with your seed supplier before applying BASIS GOLD® to any of these corn types. The application of tank mixtures with dicamba-containing herbicides (such as “Clarity” or “Distinct”) to 77-88 CRM corn should contain no more than 2 oz a.i. dicamba (e.g. 4 oz “Clarity”). Seed company publications indicate “Warning”, “Crop Response Warning”, or “Sensitive” notations for the use of some ALS herbicides on corn hybrids of 77 CRM or higher. As noted in the seed company publications, DuPont sulfonyleurea herbicides such as BASIS GOLD® should be used with caution on these hybrids.

Consult with your local DuPont representative or the DuPont Label Web Site (http://cropprotection.dupont.com/) for any additional supplemental labeling information relative to potential corn hybrid sensitivity to BASIS GOLD®.

**TIMING TO WEEDS**

Apply BASIS GOLD® when grass and broadleaf weeds are young and actively growing, but before they exceed the sizes listed on this label.

- Applications to weeds at growth stages greater than those listed below may result in incomplete control.
- Adequate soil moisture is required for residual activity. Rainfall or sprinkler irrigation within 5 days after application will enhance BASIS GOLD® residual activity.

If an activating rainfall or sprinkler irrigation (>0.5 inch or to wet the soil to 2") is not received within 5 days after application, follow with a shallow cultivation or with a
6. If the mixture is not continuously agitated, settling will occur. If settling occurs, thoroughly re-agitate before using.

7. Apply DuPont™ BASIS GOLD® spray mixture within 24 hours of mixing to avoid product degradation.

8. If BASIS GOLD® is applied in multiple loads, consider pre-slurrying the BASIS GOLD® in clean water prior to adding to the next load. This prevents the crop oil concentrate from interfering with dissolution of BASIS GOLD®.

WHEN TO APPLY - SEQUENTIAL APPLICATIONS FOLLOWING REDUCED RATES OF PREEMERGENCE HERBICIDES

BASIS GOLD® may be used as a sequential application in a planned postemergence weed control program in corn following a reduced rate of a preemergence herbicide.

Apply a reduced rate of a preemergence grass herbicide prior to corn emergence and then follow with a postemergence application of BASIS GOLD®. Products such as DuPont™ CINCH® herbicide, “Balance PRO”, “Axiom”, “Dual II Magnum”, “Surpass”, “Frontier” and “Harnessed Xtra” may be applied at as low as 1/4 to 1/2 of the full labeled use rate followed by a sequential postemergence application of BASIS GOLD®. Refer to WHEN TO APPLY - POSTEMERGENCE and ENVIRONMENTAL CONDITIONS AND BIOLOGICAL ACTIVITY sections for complete application information and precautions. Refer to the preemergence grass herbicide label for use restrictions, application information, rotational crop guidelines, and cautionary statements prior to applying BASIS GOLD®.

Do not apply BASIS GOLD® to corn that exhibits herbicide injury from previous applications made to the current or preceding crop.

TANK MIX APPLICATIONS

For Additional Control of Broadleaf Weeds

BASIS GOLD® may be tank mixed with the herbicides below for additional control of broadleaf weeds. See the tank mix partner label for weeds controlled, precautions, use restrictions, and crop rotation information. Crop oil concentrate must be used in the tank mixtures specified below. The use of nonionic surfactant is permitted in place of crop oil concentrate for tank mixtures containing dicamba, however, overall weed control may be reduced. See SPRAY ADJUVANTS for adjuvant rate recommendations.

*<5" weeds
+(See “Callisto” tank mix chart on next page)

Unless noted elsewhere in this label, all tank mixtures in the table above require the addition of crop oil concentrate and ammonium nitrogen fertilizer as noted in SPRAY ADJUVANTS.

Do not use MSO adjuvants with “Callisto” tank mixes.

ADDITIONAL RECOMMENDATIONS AND/OR RECOMMENDATIONS FOR SPECIFIC WEED PROBLEMS

For Additional Control of Grass Weeds

BASIS GOLD® may be tankmixed with a reduced rate of DuPont™ ACCENT® herbicide for enhanced control of many grass weeds listed in WEEDS CONTROLLED. Mix BASIS GOLD® with 1/4 - 1/3 oz of ACCENT® for control of the following weeds:

<table>
<thead>
<tr>
<th>Weed</th>
<th>BASIS GOLD® Alone</th>
<th>1/4 - 1/3 oz ACCENT®</th>

<tr>
<td>Florida pusley</td>
<td>1 - 2 inches</td>
</tr>
</tbody>
</table>

*Atrazine 90DF. Products containing atrazine are restricted use products.

BASIS GOLD® + atrazine tank mix may result in reduced control of grasses (antagonism) if applied to grasses under low moisture stress or to grasses exceeding the maximum labeled height. Before applying BASIS GOLD® + atrazine tank mix,
Tank Mixtures with insecticides
DuPont™ BISAS GOLD® may be tank mixed with pyrethroid or carbamate insecticides such as DuPont™ AGANA® XL or DuPont™ LANNATE® insecticides.

To avoid crop injury or antagonism, apply the products indicated below at least seven days before or 3 days after the application of BISAS GOLD®.
Do not tank mix BISAS GOLD® with “Basagran” or “Laddok” or severe crop injury may occur.
Do not tank mix BISAS GOLD® with 2,4-D-containing products as severe grass control antagonism may occur.
Do not tank mix BISAS GOLD® with foliar-applied organophosphate insecticides such as “Lorsban”, malathion, parathion, etc., as severe crop injury may occur.
Do not tank mix BISAS GOLD® with other acetolactate synthase (ALS) inhibiting herbicides unless the mixture is specifically recommended on BISAS GOLD® labels or fact sheets, as severe crop injury may occur.

Other than the exceptions noted, and in addition to the tank mix partners and rates indicated above, BISAS GOLD® may be tank mixed or followed with sequential applications of other products registered for use in field corn. BISAS GOLD® may be applied in tank mix combinations with full or reduced rates of other products provided:
• The tank mix product is labeled for the same timing, method of application, adjuvants and use restrictions as BISAS GOLD®.
• The tank mixture is not specifically prohibited on the label of the tank mix partner.
• The tank mix combination is compatible as determined by a “jar test” described in the TANK MIX COMPATIBILITY TESTING section below.

Tank Mixing Precautions:
• Weed control and crop response with tank mixtures not specifically recommended in this label are the responsibility of the user and manufacturer of the tank mix product.
• Read and follow all applicable use directions, precautions, and limitations specified on the respective product labels and fact sheets.
• Do not exceed labeled application rates. Do not tank mix BISAS GOLD® with other products that contain the same active ingredients as BISAS GOLD® (nicosulfuron and rimsulfuron) unless the label of each tank mix partner specifies the maximum rate that may be used.
• A corn plant’s predisposition to develop fused tissue emerging from the whorl (rattail) after the V-11 stage may increase when a product containing dicamba (i.e., “Clarity”, “Marksman”) is applied to small corn under early stressful conditions. Be aware of this when applying tank mixes with dicamba to small corn (V-3 stage or smaller) under stressful conditions. See ENVIRONMENTAL CONDITIONS for a description of these stressful conditions.

TANK MIX COMPATIBILITY TESTING
Perform a jar test prior to tank mixing to ensure compatibility of BISAS GOLD® and other pesticides. Use a clear glass quart jar with lid and mix the tank mix ingredients in their relative proportions. Invert the jar containing the mixture several times and observe the mixture for approximately 1/2 hour. If the mixture balls up, forms flakes, sludges, gels, oil film or layers, or other precipitates, it is not compatible and the tank mix combination should not be used.

ENVIRONMENTAL CONDITIONS AND BIOLOGICAL ACTIVITY
BISAS GOLD® is rainfast in four hours.
BISAS GOLD® rapidly inhibits the growth of susceptible weeds, reducing weed competition within as little as 6 hours after application. Susceptible plants are controlled in 7–21 days.
The degree and duration of control depend on spray coverage, activating rainfall, weed spectrum, weed size, growing conditions before and after treatment, soil moisture, and adjuvant selection.
Adequate soil moisture is required for optimum activity.
Rainfall or sprinkler irrigation within 5 to 7 days will enhance BISAS GOLD® residual activity. A timely cultivation may be required for maximum weed control without an activating rain.
Treating weeds that exceed maximum label height or that are under stress may result in incomplete control.
• Poor weed control or crop injury may result from applications made to plants under stress from:
  • abnormally hot or cold weather
  • environmental conditions such as drought, water-saturated soils, hail damage, or frost
  • disease, insect, or nematode injury
  • prior herbicide, or carry-over from a previous year’s herbicide application
If the corn or weeds are under stress, delay application until stress passes and both weeds and corn resume active growth. If weeds or corn are beyond the maximum size listed on this label, an application of DuPont™ ACCENT® herbicide should be made. See the ACCENT® label for tank mix partner information.
Applications should be made when minimum nighttime temperatures are above 40°F and the maximum daytime temperatures are below 92°F to maximize performance and minimize the potential for crop injury.
Applications made during or immediately following periods of large day/night temperature fluctuations or where daytime temperatures do not exceed 50°F may decrease weed control and increase the potential for crop injury.
Band Application

- For band applications, use proportionately less spray mixture.
- To avoid crop injury, carefully calibrate the band applicator to not exceed the labeled rate.
- Carefully follow the manufacturer’s instructions for nozzle type (flat fans), orientation, distance of nozzles from the crop and weeds, spray volumes, calibration and spray pressure.

Sprayer Preparation/Cleanup

It is important that spray equipment is clean and free of previous pesticide deposits before using DuPont™ BASIS GOLD® and then properly cleaned out following application. Clean all application equipment before applying BASIS GOLD®. Follow the cleanup procedures specified on the label of the product previously sprayed. If no cleanup procedure is provided, use the procedure that follows. Immediately following applications of BASIS GOLD®, thoroughly clean all mixing and spray equipment to avoid subsequent crop injury.

Note:
- When cleaning spray equipment before applying BASIS GOLD®, read and follow label directions for proper rinsate disposal of the product previously sprayed.
- A steam cleaning of spray tanks is recommended to dislodge any visible pesticide deposits.
- When spraying or mixing equipment will be used over an extended period to apply multiple loads of BASIS GOLD®, partially fill the tank with fresh water at the end of each day of spraying, flush the boom and hoses, and allow to sit overnight.

Cleanup Procedure

1. Drain the tank and thoroughly hose down the interior surfaces. Flush the tank, hoses, and boom with clean water for a minimum of 5 min.
2. Partially fill the tank with clean water and add one gal of household ammonia* (containing 3% active) for every 100 gal of water. Finish filling the tank with water, then flush the cleaning solution through the hoses, boom, and nozzles. Add more water to completely fill the tank and allow to agitate/recirculate for at least 15 min. Again, flush the hoses, boom, and nozzles with the cleaning solution, then drain the tank.
3. Repeat Step 2.
4. Remove the nozzles and screens and clean separately in a bucket containing the cleaning agent and water.
5. Thoroughly rinse the tank with clean water for a minimum of 5 min, flushing the water through the hoses and boom.

*Equivalent amounts of an alternate strength ammonia solution or a tank cleaner recommended in the DuPont bulletin “Sulfonyleurea Herbicides, A Guide to Equipment Cleanout,” may be used.

Spray drift management

The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator is responsible for considering all these factors when making application decisions.

Avoiding Spray Drift is the Responsibility of the Applicator.

Importance of Droplet Size

The most effective way to reduce drift potential is to apply large droplets (>150 - 200 microns). The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. The presence of sensitive species nearby, the environmental conditions, and pest pressure may affect how an applicator balances drift control and coverage. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly or under unfavorable environmental conditions! See Wind, Temperature and Humidity, and Temperature Inversions sections of this label.

Controlling Droplet Size - General Techniques

- Volume - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- Pressure - Use the lower spray pressures recommended for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use a higher-capacity nozzle instead of increasing pressure.
- Nozzle Type - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles.
- Boom Length - The boom length should not exceed 3/4 of the wing or rotor length - longer booms increase drift potential.
- Application Height - Application more than 10 ft above the canopy increases the potential for spray drift.

Boom Height

Setting the boom at the lowest labeled height (if specified) which provides uniform coverage reduces the exposure of droplets to evaporation and wind. For ground equipment, the boom should remain level with the crop and have minimal bounce.

Wind

Drift potential increases at wind speeds of less than 3 mph (due to inversion potential) or more than 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given wind speed. Avoid Gusty or Windless Conditions.

Note: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.
STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage and disposal.

Storage: Store the product in the original container only. Do not contaminate water, other pesticides, fertilizer, food, or feed in storage. Avoid contact with water. In case of a spill, dispose of wastes in compliance with local, state and federal regulations.

Product Disposal: Pesticide, spray mixture, or rinsate that cannot be used according to label instructions must be disposed of according to applicable Federal, state, or local procedures.

Container Disposal: Completely empty bag into application equipment. Then dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Container Disposal (Water soluble packaging): Do not reuse the outer box or the resealable bags. When all water-soluble packets are used, the outer packaging should be clean and may be disposed of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by open burning. If it is burned, stay out of the smoke. If the resealable bag contacts the formulated product in any way, the bag must be triple-rinsed with clean water. Add the rinsate to the spray tank and dispose of the outer wrap as described above.

LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read this Limitation of Warranty and Liability Before Buying or Using This Product. If the Terms Are Not Acceptable, Return the Product at Once, Unopened, and the Purchase Price Will Be Refunded.

It is impossible to eliminate all risks associated with the use of this product. Such risks arise from weather conditions, soil factors, off-target movement, unconventional farming techniques, presence of other materials, the manner of use or application, or other unknown factors, all of which are beyond the control of DuPont. These risks can cause: ineffectiveness of the product, crop injury, or injury to non-target crops or plants. WHEN YOU BUY OR USE THIS PRODUCT, YOU AGREE TO ACCEPT THESE RISKS.

DuPont warrants that this product conforms to the chemical description on the label thereof and is reasonably fit for the purpose stated in the Directions for Use, subject to the inherent risks described above, when used in accordance with the Directions for Use under normal conditions.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, DUPONT MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR OF MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO EVENT SHALL DUPONT OR SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT. BUYER'S OR USER'S BARGAINED-FOR EXPECTATION IS CROP PROTECTION. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER AND THE EXCLUSIVE LIABILITY OF DUPONT OR SELLER, FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, TORT OR STRICT LIABILITY), WHETHER FROM FAILURE TO PERFORM OR INJURY TO CROPS OR OTHER PLANTS, AND RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT, OR AT THE ELECTION OF DUPONT OR SELLER, THE REPLACEMENT OF THE PRODUCT.

To the extent consistent with applicable law that allows such requirement, DuPont or its Ag Retailer must have prompt notice of any claim so that an immediate inspection of buyer's or user's growing crops can be made. Buyer and all users shall promptly notify DuPont or a DuPont Ag Retailer of any claims, whether based on contract, negligence, strict liability, other tort or otherwise, or be barred from any remedy.

This Limitation of Warranty and Liability may not be amended by any oral or written agreement.

NOTICE TO BUYER: Purchase of this material does not confer any rights under patents of countries outside of the United States.
