AquaNeat (Glyphosate isopropylamine salt) is a state restricted use pesticide and is to be distributed only by licensed pesticide dealers. Only certified applicators or persons under the direct supervision of a certified applicator may use or apply AquaNeat (Glyphosate isopropylamine salt).

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

FOR CONTROL OF CORDGRASS (Spartina spp.) IN ESTUARIES

For distribution and use only by applicants approved under Aquatic Noxious Weed Control National Pollutant Discharge Elimination System Waste Discharge General Permit (NPDES Permit No. WAG-993000) issued by the Washington State Department of Ecology and made available by the Washington State Department of Agriculture. All applicators must secure coverage under the NPDES permit with the WSDA prior to making any applications.

DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, and precautions on the EPA registered label.

Broadcast Application (Ground): Apply 2 to 8 quarts of AquaNeat® in 5 to 100 gallons of spray solution per acre. For best results, complete coverage of cordgrass clumps is required.

Hand-Held, Back-Pack or High Volume Equipment: Apply a 2 to 8% solution of this product. Ensure that complete coverage of cordgrass clumps is achieved. Do not spray to the point of runoff.

Broadcast Application (Air): Apply 2 to 8 quarts of AquaNeat® in 5 to 100 gallons of spray solution per acre. Maintain at least a 50-foot buffer between commercial shellfish beds and treated areas. The potential for spray drift is dependent upon weather and equipment related factors. The applicator must be familiar with local wind patterns and monitor and record temperature and wind speed prior to and periodically during application. Schedule application in order to allow at least 5 hours before treated plants are covered by tidewater.

Wiper Applications: For wick or wiper applications, mix 1 gallon of this product with 2 gallons of clean water to make a 33% solution. The addition of a nonionic surfactant at a rate of 10% by volume of the total herbicide solution is recommended. In heavy stands, a double application in opposite directions may improve results.

Use a crop oil concentrate, modified vegetable oil concentrate or nonionic surfactant (at labeled use rates) when making broadcast applications (ground or air) or when using hand-held, back-pack or high volume equipment. Other spray adjuvants (including antifoaming agents, drift control agents and water conditioning agents) may be used if needed. Only use spray adjuvants that are registered by WSDA for
aquatic use and are authorized under the NPDES permit. Refer to the label booklet for AquaNeat® for general information on product use, mixing directions and application equipment and techniques.

Restrictions / Precautions
- Prior to application, survey the area to be treated to determine if shellfish beds exist within the intended treatment area. Wait either until shellfish have been harvested before application is made or do not harvest shellfish for 14 days following treatment.
- The presence of debris and silt on the surface of cordgrass plants will reduce product performance. It may be necessary to wash targeted plants prior to application to improve herbicide uptake. Where cordgrass has been cut or mowed prior to application, allow significant regrowth before application to ensure adequate interception and uptake of the herbicide solution. Rainfall within two hours or immersion within four hours after application may reduce effectiveness.
- Under ideal application conditions, that is, where silt and debris are not present on plant surfaces, good spray coverage is achievable, target plants are actively growing, and recommended rates and application volumes are used, allow at least 4 hours drying time before plants are covered by tidewater. Where one or more of these conditions are not met, schedule applications to allow at least 5 hours of drying time before plants are covered by tidewater.
- Broadcast applications shall not be made when the wind speed at the application site exceeds 10 miles per hour.

WSDA Container Disposal Guidance
Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.

This label for AquaNeat® expires and must not be distributed or used in accordance with this SLN registration after December 31, 2015.

NOTICE
Read the "WARRANTY DISCLAIMER" and "LIMITATION OF LIABILITY" in the label booklet for this product before using this product. Those terms apply to this supplemental labeling and if those terms are not acceptable, return the product unopened at once.
