WORM SHAPED BAITS

20

Scientifically designed and tested to mimic a mole’s natural food source. Moles may consume a lethal dose in a single feeding, but it may take 2 or more days from the time of bait consumption for moles to die.

This Product May Only be Used to Control Moles* in Manual, Below-Ground Applications.

ACTIVE INGREDIENT:
Bromethalin (CAS #63333-35-7): 0.025% OTHER INGREDIENTS: 99.975%

TOTAL 100.000%

TALPIRID®

KILLS MOLES

MIMICS A MOLE’S NATURAL FOOD SOURCE, THE EARTHWORM

READY TO USE

KILLS MOLES

NET WT: 3.5 oz (100 g)
(TWO Individually Sealed Trays of 10)

KEEP OUT OF REACH OF CHILDREN

CAUTION

See back panel for First Aid and additional precautionary statements.

*Not for use against the star-nosed mole in North Carolina

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

READ THIS LABEL: Read this entire label and follow all use directions and use precautions.

IMPORTANT: Do not expose children to this product or use it for any purpose other than to control moles. To help prevent accidents:
1. Store product not in use in locations out of the reach of children and pets. 
2. Keep pets out of application areas and USE RESTRICTIONS on this label. Apply bait only in underground runways of moles. Keep pets out of treated areas. Do NOT use this product above ground.
3. Dispose of product container and unused or spoiled product as specified on label.

USE RESTRICTIONS: This product may only be applied at the use sites and by the application methods indicated on the label. This product may only be used in lawns, parks, around homes, golf courses, ornamental gardens, nurseries and other non-crop, non-agricultural areas to control eastern moles (Scalopus aquaticus), star-nosed moles (Condylura cristata parva) and Sciuridae spp. Bait must be applied directly into mole tunnels systems. This bait must be applied underground in either main underground runways or in subsurface feeding tunnels. This bait may not be used above ground. Wear gloves when bait is handled. 

SELECTION OF TREATMENT AREAS: The presence of moles may be indicated by a network of subsurface runways in the turf or by a series of conical mounds of earth pushed up from deep burrows. Subsurface runways are indicated by raised ridges of vegetation and soil caused by moles bringing food just below the soil surface. These runways are especially noticeable when the grass above them turns yellow. Conical mounds may be indicative of the location of deeper main underground runways.

APPLICATION DIRECTIONS:
Remove and place worm shaped bait according to use directions below.

SUBSURFACE RUNWAYS: TALPIRO has been specially designed to mimic the natural food sources of the mole. To achieve maximum effect, TALPIRO should only be placed in areas used habitually by moles for feeding.

ESTABLISHING INITIAL ACTIVITY: Use your finger, small wooden dowel or a narrow rod to puncture a hole in the top of subsurface runways. Be careful not to crush runways. Mark opened runways and revisit them 48 to 72 hours later. Runways that have had holes resealed within 72 hours should be baited.

BAITING ACTIVE RUNWAYS: Make a hole in the top of each runway with a rod slightly larger than the diameter of the bait. Drop one worm into the runway, using the rod to push any exposed bait completely into the runway. Carefully reseal the runway with a small amount of dirt to exclude light. Re bait each active subsurface runway 5 to 10 feet of each active runway every 5 to 7 days after bait application

DETERMINING BAITING RESULTS: Five (5) to 7 days after bait application, check for mole activity using the same procedure for determining initial activity. Return 48 to 72 hours later and retreat all active runs.

MAIN UNDERGROUND TUNNELS AND CONICAL MOUNDS: Mole construct deeper tunnels that are not visible from the surface. These deep tunnels systems are often marked by a series of conical mounds (piles of dirt) 4 to 12 inches high formed when dirt is pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a bamboo handle, into the soil between mounds. When the probe enters a tunnel, the resistance on the probe will decrease rapidly. Mark opened tunnels and revisit them 48 to 72 hours later.

Runways that have had holes resealed within 72 hours should be baited.

To bait deep tunnels, drop one TALPIRO worm through the probe hole, using the probe to push the bait completely into the tunnel. Cover the hole with a piece of sod, a small rock or a piece of newspaper to allow for visual inspection. Repeat bait application every 5 to 10 feet of each active deep tunnel and within 5 feet of each active conical mound. Check for the effects of treatment 5 to 7 days after bait application using the same procedures for determining tunnel location. Return 48 to 72 hours later and retreat all active tunnel systems.

PRECAUTIONARY STATEMENTS
Hazards to Humans and Domestic Animals
CAUTION: Harmful if swallowed or absorbed through the skin. Keep away from children, domestic animals and pets. Do not get in eyes, on skin, or on clothing.

All handlers (including applications) must wear water resistant protective clothing. Any person who inhales cyanide or unabsorbed bait following application of this product must wear protective gloves.

User Safety Requirements
Follow manufacturer’s instruction for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Wash and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash hands thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals.

Environmental Hazards
This product is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store only in original container in a cool, dry place inaccessible to children and pets. Keep containers closed and away from other chemicals.

WARRANTY: If a product is returned to the manufacturer, Buyer assumes all risk of use and handling of this product. Seller will inspect such a product and, at its discretion, replace it or have it repaired or return the purchase price upon receipt of a return shipment. The buyer is responsible for all costs of transportation to and from the manufacturer. Buyer must provide proof of purchase and complete warranty form to manufacturer to ensure warranty coverage. The manufacturer reserves the right to inspect any product returned to the manufacturer. Buyer must provide the manufacturer with a complete description of the nature and extent of the problem before an inspection is made.
