FOR SWIMMING POOL USE ONLY  
KEEP OUT OF REACH OF CHILDREN

DIRECTIONS FOR USE

Aqua Balance Pool Conditioner reduces chlorine consumption in outdoor swimming pools. It will stabilize the chlorine residual for both liquid and dry chlorinating compounds.

Adjust pH of pool water to 7.2 - 7.6. Add Aqua Balance Pool Conditioner at the rate of 5 pounds per 20,000 gallons of pool water in unstabilized or freshly filled pools. This dosage will provide 30 ppm cyanuric acid. If the pool is already stabilized or you have been using stabilized chlorinating chemicals, check cyanuric acid level before adding Aqua Balance Pool Conditioner. Use a test kit designed for this purpose. If you do not have a test kit for cyanuric acid, have water checked by a pool service technician or a professional pool supply store. The ideal cyanuric acid level is 30 - 50 ppm. The best way to add Aqua Balance Pool Conditioner is slowly through skimmer, while filter and pump are running. You can also make up a slurry in a large plastic bucket and add directly to the pool with pump and filter running. In either case, run filter and pump for 4 - 6 hours after addition. Chlorinate in the usual manner per label instructions. Check the concentration of cyanuric acid annually.

For service or additional information, call 1-800-35-CLEAN (352-5326).

CUIDADO: SI USTED NO PUEDE LEER EL INGLÉS, PIDAAYUDA Y PREGUNTE SOBRE EL CONTENIDOY LAS INSTRUCCIONES DE USO ANTES DE EMPLEAR ESTE PRODUCTO.

CAUTION: IRRITANT. If product comes in contact with eyes, flush with large amounts of water. Call a physician.

STORAGE AND DISPOSAL

Keep product dry in tightly closed container when not in use. Store in a cool, dry, well-ventilated area away from heat or open flame. In case of decomposition, isolate container, if possible, and flood with large amounts of water to dissolve all material before discarding. Do not reuse empty container. Securely wrap original container in several layers of newspaper and discard in trash.
