HEMPEL'S ANTIFOULING GLOBIC 81920 as an advanced anti-fouling paint containing expensive metals and other organic stable for the prevention of formation, bloom, mold and other marine fouling organisms. Recommended for the marine protection of steel, fiberglass and wood. Hormet can be applied in all navigable waters where the temperatures are favorable. May be applied on the surface of all vessels painted with proper barrier coating.

DIRECTIONS FOR USE: It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

APPLICATION INSTRUCTIONS:

For application by brush, roller, or airless spray equipment.

This product is to be used on the underwater surfaces of steel, fiberglass and wood vessels operated in all navigable waters. Anti-fouling paint is to be applied to newly built vessels and in the repair and maintenance of vessels or boats. First thoroughly apply to the bottom dry surface with a temperature above the dew point. Apply over previously painted surfaces only after a thorough cleaning and the paint is completely dry. After each coating does not peel. The thickness of the paint is determined by the ship's type of vessel. The number of coats required is not to exceed the maximum number of coats required on the substrates are not to exceed 1.00 mm (0.040") between coats. The drying time is approximately 15-20 minutes. Tack-free time is approximately 1-2 hours. The paint may be applied to the substrates at any temperature provided the temperature is above 0°C (32°F).

STORAGE AND DISPOSAL:

Precautionary statements: Not for disposal in water, soil or landfills. Disposal of this product is governed by the Waste Management Regulations of the Clean Air Act Amendments of 1990, VFAH/P VOS control (granules).<br />
