NOTICE:
Federal Law requires that this product be sold in its original container and in the quantities shown on the label.

PRECAUTIONARY STATEMENTS

Dangers to Humans and Domestic Animals

DANGER: Highly corrosive. Causes skin and eye damage. May be fatal if inhaled. Do not get in eyes, on skin or on clothing. Wear goggles or safety glasses and rubber gloves when handling, inhaling to nose and throat. Avoid breathing dust. Remove and wash contaminated clothing before reuse.

Environmental Hazards

This product is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, harbors, oceans or other waterways. Use in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and/or the implementing agency has been notified in writing prior to discharge. Do not discharge effluent containing this product into sewers or disposal systems without prior notifying the sewage treatment facility. For guidance contact your State Water Board or Regional Office of the EPA.

Physical and Chemical Hazards

Strong Oxidizing Agent. Mix only with water. Use only clean, dry, uncontaminated metal in plastic to prevent corrosion, contamination with moisture, acids, organic matter or other chemicals. This chemical with generation of heat, liberation of hazardous gases and possible explosion of the vessel. In case of contamination or decomposition, do not re-enter container. Dispose of container in open air or well-ventilated area. Flood with large volumes of water, if necessary.

norweco®

A Calcium Hypochlorite Disinfecting Tablet for Residential Wastewater Treatment Systems

Active Ingredient: Calcium Hypochlorite 73%
Other Ingredients: 27%

Minimum Available Chlorine: 73%

EPA Registration Number: 0320-5-0

KEEP OUT OF REACH OF CHILDREN

DANGER

FIRST AID:

IF IN EYES: Hold open eye and flush steadily and gently with water for 15-20 minutes. Remove contact lenses, if present. After the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Wash skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth contact.

IF SWALLOWED: If swallowed, drink plenty of water. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.

MEDICAL TREATMENT (If known): Chemical irritation of the mouth or pharynx, or aspiration of toxic material may cause severe tracheal damage which may require an endotracheal tube or tracheotomy. Contact 1-800-332-1780 or your local poison control center for 24-hour emergency medical treatment information. Ask the product container or label with you when calling a poison control center or doctor, or going for treatment.

Manufactured by: Norwes Water Equipment Co. 230 Powershed Street Norwalk, Ohio USA 44857-1195 (419) 665-4471

Directions for Use

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Sewage & Wastewater Effluent Treatment

The addition of sewage effluent must be evaluated by determining the load level, the number of bacteria and the level of chlorine demand, as determined by the Standard Methods for the Examination of Water and Wastewater. The chlorine demand must be satisfied by a dosage of chlorine permitted by the controlling regulatory jurisdictions. On the average, a minimum dosage of 2 parts per million chlorine is necessary. The importance of fulfilling chlorine residual in the effluent, the chlorine residual is the critical factor in disinfection, must be emphasized. The addition of chlorine to the effluent, when in suitable relation to the water quality standards requirements, should be evaluated as an operating standard valid only to the extent verified by the controlled tests of the effluent.

The following are critical factors affecting wastewater disinfection:

1. Mixing: It is imperative that the product be instantaneous and completely mixed to ensure reaction with the chlorine in the wastewater. This is a critical component of the wastewater.

2. Contact Time: The length of time the material must be maintained.

3. Dosage/Discharge Control: The effluent should be continuously controlled at a concentration level of 0.3 to 0.5 mg/L free chlorine residual after a 15 to 30 minute contact time. A reasonable average of chlorine is 0.5 mg/L after 15 minutes contact time.

Septic Tanks

(Small Wastewater Treatment Plants)

To refill a residential or small scale wastewater treatment, remove tubes holding tablets. Re-place as follow:

1. Remove caps and tube holes. Close with water.

2. Fill each tube to top, over-tubed at a time.

3. Tablets must be flat, or tubes will clump.

4. Replace caps and metal tubes so they rest in channel in favor of filling.

To use manufacturer's chlorination Bromine, 10-20 tablets for 3,000 gal (11,000 L) of water, increase dosage as necessary, to obtain the required level of available chlorine.

Storage and Disposal

Keep this product dry. It is highly corrosive when wet. In case of spill, dry with uncontaminated rags away from body and open flame. In case of decomposition, toxic gases may be released. In such case, cover large volumes of water to dissolve all material before discarding this container. Non-combustible container. Do not reuse or refill container. Do not incinerate if electrical or metal container. For testing its available in the trash collection. Do not pour waste in gutters, sewers or septic tanks. It is critical to use the equipment. Place empty container thoroughly with water to dissolve all material prior to disposal.
