PAK™27 Algaecide

ACTIVE INGREDIENT:
Sodium Carbonate Peroxyhydrate ............ 85 %
OTHER INGREDIENTS ............................ 15 %
Total: ......................................................... 100.0%

KEEP OUT OF REACH OF CHILDREN

DANGER: Corrosive

FIRST AID

If in eyes — Hold eye open and rinse slowly for 15-20 minutes.
- Remove contact lenses, if present, after the first five minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If inhaled — Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth.
- Call a poison control center or doctor for treatment advice.

If on skin — Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

If swallowed — Call a poison control center or doctor immediately for treatment advice.
- Have person drink plenty of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

In Emergency: Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage.

FOR CONTROL OF BLUE – GREEN ALGAE IN LAKES, PONDS AND DRINKING WATER RESERVOIRS. — Apply 3.0 – 16.9 pounds per acre -foot (9.0 – 51.9 pounds/million gallons) of water (equivalent to 0.3 – 1.7ppm hydrogen peroxide) by broadcasting or use of a mechanical spreader to dose the solid product over the surface of the water. In bodies of water where aerators are available, the material may be dosed at the edges while the aerator runs to allow for adequate mixing. Alternatively, the material may be dosed in the turbulence created by the aerator to facilitate rapid mixing.

Note: Blue – green algae control is more easily achieved if treated soon after growth starts. Larger amounts of product may be needed to treat heavier blooms. As little as 2.5 pounds per acre-foot could be used for algaestatic treatment.

Precaution: Decaying algae can deplete dissolved oxygen which can lead to fish kill, if excessive. Apply with 8 to 10 hours of daylight remaining. Do not reapply within 48 hours. If treating a large lake or heavy bloom, treat 1/3 to 1/2 of the area and wait 2 to 3 days before treating remainder of water.
