FIRST AID

IF SWALLOWED:
• Call a poison control center or doctor immediately for treatment advice.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Have person sip a glass of water if able to swallow.
• Do not give anything by mouth to an unconscious person.

IF ON SKIN OR CLOTHING:
• Take off contaminated clothing.
• Wash skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

For MEDICAL Emergencies Call 24 Hours A Day 1-866-324-7577.
Have the product container or label with you when calling a poison control center or doctor or going for treatment.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION
 Harmful if swallowed. Avoid breathing spray mist. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Mixers, loaders, applicators and other handlers of this product must wear long-sleeved shirt and long pants, shoes plus socks, and chemical-resistant gloves made of any waterproof material, such as nitrile, butyl, neoprene and/or rubber laminates.

Discard clothing and other absorption materials that have been contaminated or heavily contaminated with this product’s concentrate. Follow manufacturer’s instructions for cleaning and maintaining personal protective equipment (PPE). If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed tanks, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(d)(4)-(6)), the transfer PPE requirements may be reduced or modified as specified in the WPS.

(Continued)
IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for "applicators and other handlers" and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

**User Safety Recommendations**
- Wash thoroughly with soap and water after handling. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**Environmental Hazards**
Do not apply directly to water; to areas where surface water is present or to intertidal areas below the mean high-water mark. Do not contaminate water when disposing of equipment washwater. Drift or run-off from treated areas is hazardous to fish and aquatic invertebrates in neighboring areas.

**Directions for Use**
It is a violation of Federal law to use this product in any manner inconsistent with its labeling. Read entire label before using this product.
Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.
AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval of 12 hours.

PPE required for entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with any thing that has been treated, such as plants, soil, or water, is long-sleeved shirt and long pants, and loose fit footwear.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE

Store in original container and keep tightly closed. Store in a cool dry area.

PESTICIDE DISPOSAL

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or runoff is a violation of federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL

Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a waste tank and drain for 10 seconds after the flow begins to drop. (For the container (continued)
GENERAL INFORMATION

SCALAST™ brand SC fungicide is a sprayable, foliar fungicide for control of certain plant diseases on: almonds, pomegranates, bell peppers, grapes, lemons, stone fruits (except cherries), some field crops, potatoes and other tuberous and root vegetables, strawberries and melons. See HOW TO USE directions for a complete list of all crops approved for use. Use of SCALAST™ SC Fungicide should be integrated into an overall disease, pest management, or IPM program. SCALAST™ SC Fungicide may be used with disease forecasting or Extension advisory programs that recommend application timings based on environmental factors favorable to disease development. Consult with your local agricultural authorities for IPM strategies established for your area.

The higher rates in the rate range or shorter spray intervals may be required under conditions of heavy infection pressure, highly susceptible varieties, or when disease-resistance/pest-management conditions exist. FAILURE TO FOLLOW THE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN ILLEGAL RESIDUES, POOR DISHAGE CONTROL, AND/OR CROP INJURY. Application may be made at the longer spray intervals under low to moderate-disease pressure.

FUNGICIDE RESISTANCE STATEMENT

SCALAST™ brand SC Fungicide is an antifungal (AP) fungicide that exhibits no known cross-resistance to fungicide chemistry such as triazoles, imidazoles, quinone outside inhibitors (QoIs), or phenylamides. SCALAST™ brand SC Fungicide inhibits or interferes with the secretion of enzymes necessary for infection in several plant pathogens, fungal species. If they exhibit cross-resistance to certain plant-pathogenic fungi in other fungicides of Group 9, which include antifungal (AP) compounds such as triazoles. Fungal pathogens can develop resistance to products with the same mode of action (continued).
action when used repeatedly. Because resistance development cannot be predicted, use of this product should conform to resistance management strategies established for the crop and use area. Consult your local or State agricultural authorities for resistance management strategies that are complementary to those in this label. Resistance management strategies may include rotating and/or tank mixing with products having different modes of action or limiting the total number of applications per season. Bayer CropScience encourages responsible resistance management to ensure effective long-term control of the fungal diseases on this label.

Do not use a fungicide from the AP group for more than 6 sprays in any one season as a sole product or 5 treatments in a mixture against *Pestanaura*** apii. In pome fruits, use as a curative treatment only in conjunction with a reliable scale warning system. For disease control on bulb vegetables, strawberries, and peaches, do not use a fungicide from the AP group for more than 2 of 8 applications or 3 of 7 applications in any one season. When applying SCALA BRAND SC FUNGICIDE alone on any crop, do not make more than two consecutive applications of SCALA BRAND SC FUNGICIDE without alternating to an equal number of applications of fungicides from a different resistance management group. SCALA BRAND SC FUNGICIDE should not be alternated or tank mixed with any fungicide to which resistance has already developed.

HOW TO USE SCALA BRAND SC FUNGICIDE

Ground Application
Apply in a minimum of 65 gallons of water per acre for tree and vine crops and 15 gallons of water per acre for field and vegetable crops. Thorough and uniform coverage is essential for effective disease control.

Aerial Application
Apply SCALA BRAND SC FUNGICIDE using fixed wing or rotary aircraft equipment in a minimum of 55 gallons of water per acre for tree and vine crops and 5 gallons of water per acre for field and vegetable crops. Thorough and uniform coverage is essential for effective disease control.

Greenhouse Applications (field only)
In unventilated glass or plastic houses, the vapor activity of SCALA BRAND SC FUNGICIDE can produce brown or necrotic spots on the crop. Intensity and frequency of these effects depend on the relative humidity (e.g., above 80%), duration of vapor exposure and concentration of the spray solution. Thus verification after spraying is necessary in such systems.
Mixing Instructions
Prepare no more spray mixture than is needed for immediate operation. Add 1/2 of the required amount of water to the mix tank. Start the agitator running before adding the required amount of SCALA BRAND BC FUNGICIDE. Continuous agitation while filling the tank to ensure thorough mixing. Maintain agitation during application and apply with properly calibrated application equipment. Do not allow spray mixture to stand overnight or for prolonged periods. A high-quality spreader/sticker approved for use on growing crops may be used with SCALA BRAND BC FUNGICIDE. SCALA BRAND BC FUNGICIDE should be added to the tank before the addition of any diluents. Consult the label/label or manufacturer for crop tolerance and safety information when used with SCALA BRAND SC FUNGICIDE.

Compatibility
SCALA BRAND BC FUNGICIDE is compatible with most commonly used fungicide (except Captafol 50 WP at <10 gallons spray volume per acre), herbicide, insecticide, and fertilizer products. However, the physical compatibility of SCALA BRAND BC FUNGICIDE with all potential tank mix partners has not been fully investigated. If tank mixing with other pesticides is desired, conduct a jar test with the volumes and rates typically used in agricultural application. Using a small container of water, add the proportionate amounts of the pesticide, wettable powders, and water-dispersible granular products first, then liquid surfactants, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 15 minutes. Look for signs of separation, gels, clumps, float, or other precipitates. Physical compatibility is indicated if no combination remains mixed or can be remixed readily. THE CROP SAFETY OF ALL POTENTIAL TANK MIXES WITH SCALA BRAND BC FUNGICIDE INCLUDING ADDITIVES AND OTHER PESTICIDES HAS NOT BEEN TESTED ON ALL CROPS. BEFORE APPLYING ANY TANK MIXTURE, SAFETY TO THE TARGET CROPS SHOULD BE CONFIRMED. This product cannot be mixed with any product containing a label prohibition against such mixing. Follow the more restrictive label limitations and precautions listed on the label of any tank mix partner.

Residual Crop Residues
Crops on this label may not be planted anytime following the last application of SCALA BRAND SC FUNGICIDE. Do not resowing to other crops for 36 days following the last application of SCALA BRAND SC FUNGICIDE.

**USE INFORMATION**

- When using tank mix rates, add fungicide(s) registered for use against the targeted disease(s).
- Use lower rate only in a tank mix with a broad spectrum fungicide for bulb vegetables.
- For optimum results, begin applications as soon as crop and/or environmental conditions become favorable for disease development.
- Make applications at 2 to 14 day interval depending upon disease conditions. Do not apply more than 54.6 g ai ha (0.2 lb a.i. of SCALA BRAND SC Fungicide per crop. Do not apply within 7 days of harvest.

**SCALA BRAND BC FUNGICIDE**

- Alone 0.15 - 0.70 lbs. A.I. per acre
- In tank mixes 0.35 lbs. A.I. per acre

For optimum results, begin applications as soon as crop and/or environmental conditions become favorable for disease development. Apply when bud burst is susceptible to infection (i.e., pink, white or red bud). If conditions favorable for disease development persist or nova, apply at full bloom or at petal fall. Make pre-harvest applications on 7 day intervals or larger.

Do not apply more than three applications of SCALA BRAND BC FUNGICIDE alone at more than 0.4 lbs. A.I. per acre.

Do not apply within 7 days of harvest. Select for use against the targeted disease(s). When using tank mix rates, add fungicide(s) registered for use against the targeted disease(s).

SPRAY DRIFT

AERIAL APPLICATIONS: Apply the pesticide only when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitats for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulation.

1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the whipping or rotor.
2. Nozzles must always point backward parallel with the airstream and never be pointed downwards more than 45 degrees.

Whenever states have more stringent regulations, they must be observed. The applicator must be familiar with and take into account the information contained in the Aerial Drift Reduction Advisory Information.

Threatened or Endangered Species Protection (Strawberries and Bulb Vegetables only)

In order to protect threatened or endangered fish species (Oregon Chub, Lost River Sucker, and Shortnose Sucker) in the following counties:

Strawberries: Benton, Clackamas, Lane, Lin, Marion, and Polk counties in Oregon.

Bulb Vegetables: Clackamas, Marion, and Multnomah counties in Oregon.

When the air is calm or moving away from habitat, commence applications on the side nearest the habitat and proceed away from the habitat. When field conditions are moving toward habitat, do not make applications within 500 yards by air or 400 yards by ground apart from occupied habitat.

Lost River Sucker and Shortnose Sucker: Endangered Lost River suckers can occur in the following areas of the Oregon portion of Klamath Basin (from the mouth of the Wilcoxon River upstream to its confluence with the Sprague River and upstream to the confluence with the North and South Forks of the Klamath, all of Agency and Upper Klamath lakes, Lake Klamath, and the Klamath River downstream to the U.S.-Canada border; all of Lost River, Miller Creek, and Cottonwood tributaries upstream for 3 miles; The Oregon portion of Willow Creek, a tributary of Clear Lake, upstream from the border for 2 miles). The Klamath Project's irrigation canal, lakes, and more.
Oregon Chub and Endangered Oregon Chub can occur in the following areas of the Willamette River drainage basin of western Oregon: North Santiam River, South Santiam River, Upper Willamette River, Middle Fork Willamette River from the head of字体 (in) upstream by its confluence with the North Fork; Lower Willamette River, Coast Fork Willamette River tributaries to the Mainstem Willamette River downstream of the Coast Fork/Middle Fork Confluence, Molalla-Pudding watershed, and Clackamas watershed.

For protection of endangered fish species (Medoc, Scarlet, Lost River, and Shoshone Sucker) in Morro and Salton Sea counties in California, please refer to the specific bulletins in those areas.

INFORMATION ON DROPLET SIZE: (This section is advisory in nature and does not supersede the mandatory label requirements).

The most effective way to reduce drift potential is to apply large droplets. The best spray management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevail over drift if applications are made improperly or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions on the following pages).

CONTROLLING DROPLET SIZE: (This section is advisory in nature and does not supersede the mandatory label requirements).

- **Volume**: Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure**: Do not exceed the nozzle manufacturer's recommended pressure. For every nozzle type, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Nozzle Orientation**: Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant drift from horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type**: Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.
BOOM LENGTH: (This section is advisory in nature and does not supersede the mandatory label requirements.)
For some unit patterns, reducing the effective boom length to less than 1/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

APPLICATION HEIGHT: (This section is advisory in nature and does not supersede the mandatory label requirements.)
Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe relative to exposure to drift to evaporation and wind.

SWATH ADJUSTMENT: (This section is advisory in nature and does not supersede the mandatory label requirements.)
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, to equalize the downwind edges of the field, the applicator must compensate for this displacement by adjusting the swath upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

WIND: (This section is advisory in nature and does not supersede the mandatory label requirements.)
Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to smoky wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE AND HUMIDITY: (This section is advisory in nature and does not supersede the mandatory label requirements.)
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.
TEMPERATURE INVERSIONS: (This section is advisory in nature and does not supersed the mandatory label instructions)

Do not make applications during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light wind variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog. However, if fog is not present, inversions can also be identified by the movement of smolder from a ground source or an aircraft smoke generator. Smoke that rises and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

DIRECTIONS FOR USE THROUGH SPRINKLER IRRIGATION SYSTEMS

Apply this product only through sprinkler irrigation systems including microjet, solid set, wheel line and center pivot. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal residue residues in the crop can result from non-uniform distribution of treated water.

For specific information about calibration, contact State Extension Service Specialists, equipment manufacturers or other irrigation experts.

SPRAY PREPARATION: Remove salt, pesticide residues, and other foreign matter from the chemical tank and entire interior system. Flush with clean water.

APPLICATION INSTRUCTIONS: First prepare a suspension of SCALA BRAND 50 FUNGICIDE in a mix tank. Fill tank with 1/2 to 1/4 the desired amount of water. Start mechanical or hydraulic agitation. Add the required amount of SCALA BRAND 50 FUNGICIDE and then the remaining volume of water. Then set sprinkler to deliver no more than 0.4 inch of water per acre. Start sprinkler and uniformly inject the suspension of SCALA BRAND 50 FUNGICIDE into the irrigation water line so as to deliver the desired rate per acre. The suspension of SCALA BRAND 50 FUNGICIDE should be injected with a positive displacement pump into the main line prior to a right angle turn to assure adequate mixing. If you should have any other questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

NOTE: When treatment with SCALA BRAND 50 FUNGICIDE has been completed, avoid further field irrigation over the treated area for 48 hours to prevent washing the chemical off the crop.
GENERAL PRECAUTIONS FOR APPLICATIONS THROUGH SPRINKLER IRRIGATION SYSTEMS

Maintain continuous agitation in mix tank during mixing and application to ensure a uniform suspension. Greater accuracy in calibration and distribution will be achieved by injecting a larger volume of a more dilute solution per unit time. The system must contain a functional check valve, vacuum relief valve, and the pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed self-acting valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being filled with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment. If you are unsure of wind conditions, contact your local extension agent.

Do not apply when wind speed favors drift beyond the area intended for treatment. If you are unsure of wind conditions, contact your local extension agent.

Do not apply when wind speed favors drift beyond the area intended for treatment. If you are unsure of wind conditions, contact your local extension agent.

Do not apply when wind speed favors drift beyond the area intended for treatment. If you are unsure of wind conditions, contact your local extension agent.

Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. A person knowledgeable of the irrigation system and responsible for its operation shall shut the system down and make necessary arrangements should the need arise.

Do not connect an irrigation system (excluding greenhouse systems) used for pesticide application to a public water system unless the health prescribed safety devices for public water supplies are in place.
IMPORTANT: READ BEFORE USE

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Bayer CropScience. All such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BAYER CROPSCIENCE MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY. NEITHER OF BAYER CROPSCIENCE IS AUTHORIZED TO MAKE ANY WARRANTIES BEYOND THOSE CONTAINED HEREIN OR TO MODIFY THE WARRANTIES CONTAINED HEREIN. TO THE EXTENT ALLOWED BY LAW, BAYER CROPSCIENCE DISCLAIMS ANY LIABILITY WHATSOEVER FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

LIMITATIONS OF LIABILITY: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, SHALL NOT EXCEED THE PURCHASE PRICE PAID, OR AT BAYER CROPSCIENCE'S ELECTION, THE REPLACEMENT OF PRODUCT.

NOTICE TO BUYER

Purchase of this material does not confer any rights under patents governing this product or the use thereof in countries outside of the United States.
SCALAM Brand SC Fungicide
For Use On: Berries, Pears, Plums, Blackberries, Grapes, Limes, Strawberries Except Chemical, Pomegranate, Pseudotsuga and Other Alien and Non-Vegetable, Strawberries and Tomatoes.

ACTIVE INGREDIENT: Pendimethalin
4-(1-Methylethyl)-6-ethyl-1,3,5-triazine-2,4-dione........... 4.8%
OTHER INGREDIENTS: ............................. 95.2%
Equivalent to 20.0 g a.i. in 2.5 gallons: 100 lbs. 100 lbs. of surimi treated per gallon.
EPA Reg. No. 754-170

KEEP OUT OF REACH OF CHILDREN

CAUTION

For FRESH VEGETABLES, FLOWERS, FRUITS, NUTS, AND ANIMALS CAUTION

Do not consume raw, cook, or have contact with the product. Do not allow children to be exposed to the product. Store in original container and keep tightly closed. Store in a cool, dry place.
