FOR USE IN SELECTED CROPS

FOR USE IN ALFALFA GROWN FOR SEED PRODUCTION, CORN (FIELD, POP, SEED, SWEET), COTTON, EDIBLE BEANS, FORAGE LEGUMES, GARLIC, GRAIN SORGHUM, LENTILS AND PEAS, NONBEARING FRUIT TREE AND NUT TREE CROPS, NONBEARING VINEYARDS, ONIONS AND SHALLOTS (DRIY BULB), PEANUTS, POTATOES, RICE, SOYBEANS, SUGARCANE, SUNFLOWERS, AND TOBACCO

ACTIVE INGREDIENTS:
Perdimethrin (N-(1-ethylpropyl)-3,4-dimethyl-2-
6-dinitrobenzeneamine) ........................................... 37.4% 
OTHER INGREDIENTS* ............................................. 62.6% 
TOTAL ................................................................. 100.0%

(1 gallon contains 3.3 pounds of perdimethrin)
*Contains aromatic naphtha

KEEP OUT OF REACH OF CHILDREN
CAUTION — PRECAUCION
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand this label, find someone to explain it to you in detail).

FIRST AID

If swallowed:
• Call a poison control center or doctor immediately for treatment advice. 
• DO NOT give any liquid to person. 
• DO NOT induce vomiting unless told to do so by a poison control center or doctor. 
• DO NOT give anything by mouth to an unconscious person.

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15-20 minutes. 
• Remove contact lenses, if present, after first 5 minutes, then continue rinsing eyes. 
• Call a poison control center or doctor for treatment advice.

If on skin:
• Take off contaminated clothing. 
• Rinse skin immediately with plenty of water for 15-20 minutes. 
• Call a poison control center or doctor for treatment advice.

NOTE TO PHYSICIAN: Because of increased risk of chemical pneumonia or pulmonary edema caused by aspiration of the hydrocarbon solvent, vomiting should be induced only under professional supervision.

Have the product container or label with you when calling a poison control center or doctor or going for treatment.
FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-866-944-8555.

EPA EST. NO. 241-MO-1

NET CONTENTS 2½ GALS. (9.46 L)

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION. Causes moderate eye irritation. Harmful if swallowed or absorbed through the skin. Avoid contact with skin, eyes or clothing.

Personal Protective Equipment (PPE):
Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category F on an EPA chemical resistance category selection chart.

Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves made of waterproof materials, such as barrier laminate, butyl rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, or viton ≥ 14 mils
• Shoes plus socks

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls:
When handlers use closed systems, enclosed tanks, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 190.400(d)(4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. 
• Remove clothing immediately if pesticide gets inside. Wash thoroughly and put on clean clothing. 
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to fish. DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent aquatic sites. DO NOT contaminate water when disposing of equipment washwaters or rinse.

Endangered Species Protection
If endangered plant species occur in proximity to the application site, the following mitigation measures are required:
• If applied by ground, leave an untreated buffer zone of 200 feet. The product must be applied using a low boom (20 inches above the ground) and ASAE fine to medium/coarse nozzles.
• If applied by air, leave an untreated buffer zone of 170 feet. Must use straight-stream nozzles (D-6 or larger); wind can be no more than 8 mph; and release height must be 15 feet or less.

To determine whether your county has an endangered species, consult the website http://www.epa.gov/epaos/usa-map.htm.

Endangered Species Bulletins may also be obtained from extension offices or state pesticide agencies. If the bulletin is not available for your specific area, check with the appropriate local state agency to determine if known populations of endangered species occur in the area to be treated.

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application.

Observe all cautions and limitations in this label and the labels of products used in combination with Stealth® Herbicide. The use of Stealth Herbicide not consistent with this label can result in injury to crops, animals, or persons. Keep containers closed to avoid spills and contamination.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide protection.

DO NOT allow spray to drift from the application site and contact people, structures people occupy at any time and the associated property, parks and recreation areas, nontarget crops, aquatic and wetland areas, woodlands, pastures, rangelands, or animals.

DO NOT enter or allow other people (or pets) to enter the treated area until sprays have dried.
AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.

Exception: If the product is soil injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Chemical-resistant gloves made of waterproof materials, such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, or viton.
- Shoes plus socks

GENERAL INFORMATION

Stealth Herbicide is a selective herbicide for controlling most annual grasses and certain broadleaf weeds as they germinate. Refer to Table 1 for a complete list of controlled weeds. Stealth Herbicide will not control established weeds.

Unusually cold, excessively wet, or hot and dry conditions that delay germination or extend germination over a long period of time can reduce weed control.

Overapplication can result in crop-stand loss, crop injury, or soil residues.

Uneven application or improper soil incorporation can decrease weed control or cause crop injury. Soil incorporation deeper than recommended can reduce weed control.

Seedling diseases, cold weather, excessive moisture, shallow or deep planting, low or high soil pH, high soil salt concentration, or drought can weaken seedlings and plants and increase the possibility of crop damage from Stealth Herbicide. Under these conditions, crop yields can be reduced.

(A) Not controlled in California.

Weeds controlled with Stealth Herbicide applied up to 4.8 pts/a

Grasses
- Annual bluegrass
- Browntop panicum
- Grass, Guineab

Broadleaves
- Dodder
- Fiddleneck

For optimum dodder control, use the highest labeled rate of Stealth Herbicide specified in the specific crop.

For dodder, use the highest rate of Stealth Herbicide specified in the specific crop.

* Suppression, but controlled when Stealth Herbicide use rate exceeds 4.8 pts/a.

† For optimum dodder control, use the highest labeled rate of Stealth Herbicide specified in the specific crop.

†† Not suppressed nor controlled in California.

MODE OF ACTION

Stealth Herbicide is a mitomycin inhibitor that interferes with the plant’s cellular division or mitosis. This and/or other products with the mitomycin inhibiting mode of action may not effectively control naturally occurring biotypes of some of the weeds listed on this label. A weed biotype is a naturally occurring plant within a given species that has a slightly different, but distinct, genetic makeup from other plants. Other herbicides with the mitomycin inhibiting mode of action include other mitomycin and mitomycin-like biotypes, such as trifluralin. If naturally occurring mitomycin inhibiting resistant biotypes are present in a field, Stealth Herbicide and/or any other mitomycin inhibiting mode of action herbicide should be tank mixed or applied sequentially with an appropriate registered herbicide having a different mode of action to ensure control.

APPLICATION RATE

Use rates for Stealth Herbicide when used alone, in tank mix, or sequential applications are given in Crop-Specific Information. Use rates of this product vary by soil texture and organic matter. See Table 2 for soil texture groupings used in this label.

| Sometimes considered transitional soils and may be classified as either medium or fine textured soils.

Peat and Muck soils: Stealth Herbicide may be used on peat and muck soils, but weed control may be inconsistent and/or reduced. Use maximum labeled use rate allowed in the specific crop.

APPLICATION TIMINGS

Stealth Herbicide will provide most effective weed control when applied by ground or aerial equipment and subsequently incorporated into soil within 7 days after application by rainfall, sprinkler irrigation, or mechanical tillage prior to weed seedling emergence from soil. Stealth Herbicide can also be applied through chemigation, including flooded basin irrigation systems. Stealth Herbicide is recommended for preplant surface, preplant incorporated, surface incorporated, postemergence, early postemergence, postemergence incorporated (CULTI-SPRAY) or layby treatment. See Crop-Specific Information for specific application directions by crop.

Preplant Surface Applications: For use in minimum tillage or no-tillage production systems, apply Stealth Herbicide alone or in tank mixes up to 45 days before planting. When making early preplant surface applications (15 to 45 days prior to planting), Stealth Herbicide should be tank mixed or followed by a postemergence herbicide application. Rainfall or sprinkler irrigation within 7 days after application is required to move this product into the upper soil surface where weed seeds germinate.

Preplant Incorporated Applications: Apply Stealth Herbicide and incorporate into the upper (1" to 2") soil surface up to 60 days before planting. Use an implement capable of giving uniform incorporation, two-pass incorporation usually results in a more consistent result.

Surface Incorporated Applications: Uniformly apply Stealth Herbicide as broadcast or band treatment to soil surface underneath established trees and/or in ground areas between trees rows. Within 7 days after application, incorporate into upper (1" to 2") soil surface using either rainfall, sprinkler irrigation, or shallow mechanical incorporation using an implement capable of giving uniform incorporation, two-pass mechanical incorporation usually results in a more consistent result.

Preemergence Surface Applications: Broadcast treatment uniformly to the soil surface at planting and up to 2 days after planting. Rainfall, sprinkler irrigation, or shallow mechanical incorporation within 7 days after application is required to move this product into the upper soil surface where weed seeds germinate. If adequate rainfall or irrigation does not occur and weed seedling emergence begins, a shallow cultivation or rotary hoeing will improve performance.

Preemergence Incorporated Applications: Stealth Herbicide must be applied prior to weed seedling emergence or in a tank mix with products that control the emerged weeds. Refer to Crop-Specific Information for specific postemergence application recommendations by crop.

Postemergence Incorporated Applications (CULTI-SPRAY): Prior to application, crop must be cultivated in such a manner as to throw at least one inch of soil over the base of the crop plants. This will prevent direct contact of Stealth Herbicide and the zone of brace root formation. Stealth Herbicide must be applied broadcast with a ground sprayer when crop is at least 4 inches tall up to layby. Use drop nozzles if crop foliage will prevent uniform coverage of the soil surface within the rows. Thoroughly and uniformly incorporate Stealth Herbicide treatments into the soil with:
- A sweep-type or rolling cultivator set to provide thorough incorporation in the top 1 inch of soil.
- Adequate overhead irrigation water or rainfall. See Crop-Specific Information (Corn and Grain Sorghum) for more details on (CULTI-SPRAY) application.

Layby Application: Apply Stealth Herbicide directly to the soil between rows as a directed spray following the last normal cultivation (layby). See Crop-Specific Information for more details on layby application.
STEALTH® HERBICIDE
EPA REG. NO. 34704-868

Split Applications: Stealth Herbicide may be applied preplant incorporated up to 60 days prior to planting and followed by a preemergence application at planting or up to 2 days after planting. The total amount of Stealth Herbicide applied per acre per season cannot exceed the highest labeled rate for any given soil type. See Crop-Specific Information for more details on split applications.

Fall Applications: Stealth Herbicide may be used in fall application programs in certain crops. See Crop-Specific Information for details on fall application timing.

SPRAYING INSTRUCTIONS

Stealth Herbicide may be applied using either water or sprayable fluid fertilizer (such as straight 32-0-0 or 28-0-0) as the spray carrier. Additionally, Stealth Herbicide may be incorporated into dry bulk fertilizer. Sprayable fluid fertilizer as a carrier is NOT recommended for use after crop emergence unless the typical fertilizer burn symptoms on the crop are acceptable.

Aerial Applications
Uniformly apply in 5 or more gallons of water per acre. Exercise caution to minimize drift. DO NOT apply during periods of gusty winds or when wind conditions favor drifting. Spray drift can cause injury to sensitive crops. It is recommended that a flagman or an automatic mechanical flagging unit on the aircraft be used to avoid overlapping and possible crop injury.

Ground Applications (Broadcast)
Uniformly apply with properly calibrated ground equipment in 10 or more gallons of water per acre or 20 or more gallons of liquid fertilizer per acre. Use sprayers equipped with appropriate nozzles that provide uniform and accurate spray distribution and minimize drift. Keep the bypass line on or near the bottom of the tank to minimize foaming. Nozzle and in-line screens must be no finer than 50 mesh. Application of Stealth Herbicide during periods of gusty winds may result in uneven applications. DO NOT apply Stealth Herbicide postemergence in liquid fertilizers.

If liquid fertilizer/herbicide(s) mixture separates in the spray tank, clogged equipment and uneven application can result. Always predetermine the compatibility of Stealth Herbicide alone with other herbicides based on the following compatibility “Jar test”:
1. Add 1 pint of fertilizer to a quart jar.
2. Add 1 to 4 teaspoons(s) of the Dry Flowable (DF), Wettable Powder (WP), Aqueous Solution (AS), Flowable (F) or Liquid (L) formulation (depending on mixing ratio required) to the liquid fertilizer. The number of teaspoons of the formulation to add can be determined by the following formula:

\[
\text{lbs or ozs of product/acre} \times 11.4 = \text{number of teaspoons of herbicide/gallons of fertilizer/acre to add to 1 pint of fertilizer}
\]

3. Close the jar and agitate until the herbicide(s) are evenly dispersed in the liquid fertilizer. If the materials DO NOT disperse well, it may be necessary to slurry the chemicals in water before adding to the fertilizer.

4. After dispersing the materials, add appropriate number of teaspoons of Stealth Herbicide to the jar and shake well. Add water soluble concentrate herbicides to the mixture last and agitate. Let the mixture stand for 30 minutes and then observe the results. Look for signs of separation of oily layer or globules, sludge, flakes or other precipitates.

5. Evaluate compatibility:
   (a) If the herbicide(s) and liquid fertilizer mixture does not separate, use this mixture in your spray tank.
   (b) If the mixture separates but mixes readily with shaking, the mixture can be used provided that good agitation is maintained in the spray tank.
   (c) If separation of the mixture occurs and agitation does not correct this problem, a compatibility agent is needed.

6. If the need for a compatibility agent is demonstrated, the following procedure is recommended. Using a clean quart jar, repeat step 1 above and add ½ teaspoon of the compatibility agent to the liquid fertilizer. Mix well and repeat steps 2, 3 and 4. If separation or precipitation occurs with the compatibility agent, DO NOT use Stealth Herbicide with that specific liquid fertilizer.

Ground Applications (Band)
Uniformly apply the broadcast equivalent rate and volume per acre. To determine these:

\[
\text{Band Width in Inches} \times \text{Broadcast Rate} = \text{Band Rate per Acre}
\]

\[
\text{Row Width in Inches} \times \text{Broadcast Volume} = \text{Band Volume per Acre}
\]

Ground Applications (Dry Bulk Fertilizer)
Apply Stealth Herbicide/dry bulk fertilizer mixtures only with ground equipment. DO NOT impregnate Stealth Herbicide onto coated ammonium nitrate or limestone because these materials will not absorb the herbicide. Dry fertilizer blends containing mixtures of ammonium nitrate or limestone may be impregnated with Stealth Herbicide. A minimum of 200 pounds of impregnated dry bulk fertilizer, excluding the weight of ammonium nitrate or limestone, must be applied per acre.

Use the following formula to determine the amount (in pints) of Stealth Herbicide to be impregnated on a ton of dry bulk fertilizer based on the rate of fertilizer to be applied per acre:

\[
\text{Pints of Stealth Herbicide per Acre} = \text{Pints of Stealth Herbicide per Tons of Fertilizer} \times \frac{\text{Pounds of Dry Fertilizer per Acre}}{2000}
\]

To impregnate Stealth Herbicide on bulk fertilizer, use a closed rotary-drum mixer or other commonly used dry bulk fertilizer blender equipped with suitable spray equipment. Spray nozzles must be placed to provide uniform coverage of Stealth Herbicide onto the fertilizer during mixing.

Apply the Stealth Herbicide/dry bulk fertilizer mixture with an accurately calibrated dry fertilizer spreader. The Stealth Herbicide/dry bulk fertilizer mixture must be spread uniformly on the soil surface.

Chemigation Applications via Sprinkler Irrigation Systems
Stealth Herbicide may be applied as a chemigation treatment through sprinkler irrigation systems. Refer to Crop-Specific Information sections for individual crops.

DO NOT apply Stealth Herbicide via chemigation to crops unless specified in Crop-Specific Information section.

Apply this product ONLY through a sprinkler irrigation system of the following type: center pivot, lateral move, and tow, side (wheel) roll, traveler, big gun, solid set, or hand move.

DO NOT apply this product through any other type of sprinkler irrigation system.

Uniform distribution of Stealth Herbicide-treated irrigation water is the sole responsibility of the applicator and is required to avoid crop injury. Lack of herbicide effectiveness or illegal pesticide residues in the crop. If you have any questions about calibration, you should contact state extension service specialists, equipment manufacturers, or other experts.

The system must be properly calibrated (with water only) to ensure that the amount of Stealth Herbicide applied corresponds to the recommended rate. Apply Stealth Herbicide in ½ to 1 inch of water during the first sprinkler set (use at least 1 inch of water in the states of Texas, New Mexico and Oklahoma). Maintain agitation in the injection nurse tank to keep a uniform herbicide suspension during application. When application is complete, flush the system with water.

Chemigation Instructions (for low volume micro sprinklers)
Output of low volume sprinkler = 4 to 50 gallons per hour (gph) per emitter. Point of application MUST be above ground.

Irrigation system should run a sufficient amount of time prior to Stealth Herbicide injection to have all emitters functioning properly. After system is operating properly, length of injection should be such that at one period of time during the injection, the first and last emitters in the system contain Stealth Herbicide-treated water. Add Stealth Herbicide to the supply tank already filled with the volume of water required for the injection period. Maintain proper agitation in Stealth Herbicide injection tank. Stealth Herbicide should be mixed in clean water and injected down-line from filter. Following Stealth Herbicide injection, system should be flushed for a period of time sufficient to clear the line of Stealth Herbicide. (If Stealth Herbicide application is made during a normal irrigation cycle, injection should be made during the last stage.)

Chemigation Calibration (for low volume micro sprinklers)
Calculation of use rate is based on wetted area around emitters - NOT on tree acres. To determine correct amount of Stealth Herbicide, use the following formula:

1. Treated area per each emitter = A
2. The area in square feet B = A x emitters/acre wet in each acre = B
3. The total area (in square feet) wet by your system = C
4. The rate per treated acre of Stealth Herbicide (based on length of control desired) = R

\[
\text{Amount of Stealth Herbicide} = \frac{C}{R} \times \frac{S}{43,560}
\]

Example:
If the average distance from emitter to perimeter of wetted area measured one inch below soil surface is 13 inches, then

\[
A = 3.14 \times (13^2 \times 13) = 3.14 \times 2009.34 = 3.14 \times 2009.34 = 6300.39
\]

If there are 300 emitters per acre, then

\[
330.7 \times 300 = 99,210
\]

If the system covers 20 acres, then

\[
C = 1106.5 \times 20 = 22,130
\]

If the desired application rate per treated acre is 2.4 qts of Stealth Herbicide, then

\[
S = 22,112 \times 2.4 \times \frac{1}{2} = 43,560
\]

Special Precautions for Chemigation
1. DO NOT apply when wind speed favors drift beyond the area intended for treatment.
2. DO NOT connect an irrigation system used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
3. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

4. The pesticide injection pipeline must contain a functional, automatic quick-closing check valve to prevent the flow of fluid back toward the injection pump. It must also contain a functional, normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

5. The sprinkler chemigation system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. In addition, systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

6. The sprinkler chemigation system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

7. The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Chemigation Systems Connected to Public Water Systems

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be no complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

Applications via Flooded Basin Irrigation Systems

Stealth Herbicide may be applied via flooded basin irrigation systems, but only to the following crops: nonbearing fruit and nut trees, nonbearing vineyards, and alfalfa grown for seed production.

Use Instructions and Precautions for Flooded Basin Irrigation

1. Stealth Herbicide may be applied through flooded basin irrigation systems designed to uniformly distribute irrigation water along the soil surface. Solid set systems utilizing tall risers for overhead application are excluded.

2. Follow all label recommendations for Stealth Herbicide regarding rates per acre, timing of application, and crop-specific restrictions and limitations.

3. DO NOT connect an irrigation system used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

4. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

5. Lower Pumps, Inc. recommends that Stealth Herbicide is mixed with water at a 1:1 ratio in the injection nurse tank to assist with product flowability. Maintain agitation in the injection nurse tank to keep a uniform herbicide suspension during application. When application is complete, flush the system with water.

SPLAY DRIFT MANAGEMENT

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determines the potential for spray drift. The applicator and grower are responsible for considering all these factors when making decisions. It is the responsibility of the applicator to avoid spray drift onto non-target areas.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops:

1. The distance of the outermost nozzles on the boom must not exceed 1/4 the length of the wingspan or rotor.

2. Nozzles must always point backward with the air stream and never be pointed downwards more than 45 degrees.

Where states have more stringent regulations, they should be observed.

INFORMATION ON DROPLET SIZE

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential but will not prevent drift if applications are made under wet or humid conditions (see WIND, TEMPERATURE AND HUMIDITY, and TEMPERATURE INVERSIONS).

CONTROLLING DROPLET SIZE

Volume - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.

Pressure - DO NOT exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When high flow rates are needed, use higher flow rate nozzles instead of increasing pressure.

Number of Nozzles - Use the minimum number of nozzles that provide uniform coverage.

Nozzle Orientation - Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is recommended practice. Significant deflection from the horizontal will reduce droplet size and increase drift potential.

Nozzle Type - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid- or straight-stream nozzles oriented straight back produce the largest droplets and the lowest drift.

BOOM LENGTH

For some use patterns, reducing the effective boom length to less than 1/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

APPLICATION HEIGHT

Applications should not be made at a height greater than 10 feet above the top of the largest plant unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

SWATH ADJUSTMENT

When applications are made with a crosswind, the upwind swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upward. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller droplets, etc.).

WIND

Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential.

NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE AND HUMIDITY

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

TEMPERATURE INVERSIONS

Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light, variable winds common with inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the
morning. Their presence can be indicated by ground fog; however, if fog is not present, inver-
sions can also be identified by the movement of smoke from a ground source or an aircraft
smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low
wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissi-
pates indicates good vertical air mixing.

SENSITIVE AREAS
This pesticide should only be applied when the wind for drift to adjacent sensitive areas
(e.g. residential areas, bodies of water, known habitat for threatened or endangered species;
or non-target crops or plants) is minimal (e.g. when wind is blowing away from the sensitive
areas).

ADDITIONS
Spray adjuvants have little or no influence on performance of Stealth Herbicide when appli-
cations are made prior to weed emergence. However, several tank mixes with Stealth
Herbicide require adjuvants to improve burndown of emerged weeds. Therefore, surfactants,
liquid fertilizer (28%, 30%, or 32% N, urea ammonium nitrate) or ammonium sulfate), or
crop oil concentrate may be used with Stealth Herbicide tank mixes applied pre-emergence,
or early postemergence to the crop. Follow the adjuvant recommendations on the tank mix
partner’s label.

When an adjuvant (or a specific adjuvant product, such as a drift control agent) is to be used
with this product, the use of a Chemical Producers and Distributors Association (CPDA)
certified adjuvant is recommended. The recommended adjuvants must contain ingredients
accepted by the EPA.

GENERAL TANK MIXING INFORMATION
Stealth Herbicide may be applied in a tank mix or a sequential application with other herbici-
cides registered for use in a given crop. Refer to the companion label for weeds controlled
in addition to Stealth Herbicide alone.

When using tank mixtures or sequential applications with Stealth Herbicide, always read the
companion product label(s) to determine the specific use rates by soil types, weed species,
and weed or crop growth stage. In addition, follow all precautions and restrictions including
state and local use restrictions that may apply to specific products. Always follow the most
restrictive label.

Uses with Other Products (Tank Mixes)
If this product is used in combination with any other product except as specifically recom-
mended in writing by Loveland Products, Inc. then Loveland Products, Inc. shall have no li-
ability for any loss, damage, or injury arising out of its use in any such combination not so
specifically recommended. If used in combination recommended by Loveland Products, Inc.
the liability of Loveland Products, Inc. shall in no manner extend to any damage, loss, or
injury not directly caused by the inclusion of the Loveland Products, Inc. product in such
combination use, and in any event shall be limited to the amount of the purchase price
of the product. Always perform a mixing test to check the compatibility of Stealth
Herbicide with all potential tank mix partners.

Mixing Instructions
1. Fill tank ½ to ¾ full with clean water or liquid fertilizer and agitate. Prior to mixing
Stealth Herbicide or Stealth Herbicide tank mixtures in liquid fertilizer, refer to
appropriate label sections for recommended uses in liquid fertilizer application
instructions, and compatibility determinations.
2. When using Stealth Herbicide or Stealth Herbicide tank mixtures in liquid fertilizer, refer to
appropriately labeled sections for recommended uses in liquid fertilizer, application
instructions, and compatibility determinations.

NOTE: Stealth Herbicide will NOT mix in high salt formulation fertilizers, such as
19-34-0. When utilizing high salt formulation fertilizers as the spray carrier, use one of
the following:
(a) Pre-emergent Stealth Herbicide in water prior to adding to tank; use 1:1 ratio of water
to Stealth Herbicide.
(b) Add water to fertilizer solution prior to adding Stealth Herbicide. The amount of
water should be equal to or greater than the amount of Stealth Herbicide to be
used.

2. Stealth Herbicide Alone
When using Stealth Herbicide alone, add Stealth Herbicide to the partially filled tank
while agitating and then fill the remainder of the tank with water or liquid fertilizer.

3. Stealth Herbicide Tank Mixes
Add the tank mixture ingredients in the order listed below prior to adding Stealth
Herbicide.

(a) Water Soluble Concentrate (WSC) formulations - Add all the WSC formulation to
the partially filled tank while agitating.
(b) Dry Flowable (DF)/Water Dispersible Granule (WDG) formulations - Add the
granules to the partially filled tank while agitating. Make a slurry of the granules in
water before adding to liquid fertilizer.
(c) Flowable (F) formulations - Add the F formulation to the partially filled tank while
agitating.
(d) Water Soluble Concentrate (WSC) formulations - Add the WSC formulation to
the partially filled tank while agitating.
(e) Emulsifiable Concentrate (EC) formulations - Add the EC formulation to the par-
tially filled tank while agitating.
(f) Tank Mixes: Add Stealth Herbicide to the tank

4. Through and continuous sprayer-tank agitation MUST be maintained during mixing and
spraying of Stealth Herbicide. If the spray mixture is allowed to settle for any period of
time, thorough agitation is essential to resuspend the mixture before spraying is
resumed. Continue agitation while spraying.

Cleaning Spray Equipment
Clean application equipment thoroughly by using a strong detergent or commercial spray
cleaner according to the manufacturer’s directions, and then triple rinse the equipment
before and after applying this product.

RESTRICTIONS AND LIMITATIONS
• DO NOT exceed the maximum labeled rate for any soil type.
• Stealth Herbicide will not control established weeds. Destroy emerged weeds prior to
application.
• Stealth Herbicide is most effective in controlling weeds mechanically incorporated or
when incorporated into the weed germination zone by adequate rainfall or overhead
irrigation after application.
• When using tank mixtures with Stealth Herbicide, always read the companion product
label(s) to determine the specific use rates by soil types, weed species, and weed or
crop growth stage. In addition, follow all precautions and restrictions including state
and local use restrictions that may apply to specific products. Always follow the most
restrictive label.
• In the event of a crop loss due to adverse weather conditions or other reasons, any
crop registered for a preplant incorporated application of Stealth Herbicide can be
replanted without adverse effects the same year (see Crop-Specific Information
for exceptions). If replanting is necessary, DO NOT work the soil deeper than the treated
zone.
• Refer to Crop-Specific Information for crop-specific preplant intervals and feeding
and grazing restrictions.

CROP ROTATION RESTRICTIONS
• Use of Stealth Herbicide in accordance with label directions is expected to result in
normal growth of rotational crops in most situations; however, various environmental
and agronomic factors, such as soil conditions, make it impossible to eliminate all
risks associated with the use of this product and, therefore, rotational crop injury is
always possible. Soil characteristics and environmental conditions which may
contribute to crop loss that may be accentuated by the use of Stealth Herbicide
include: coarse soils, compaction, high salt content, sodicity, and/or wet
soils, drought, and heavy rainfall soon after application.
• When Stealth Herbicide is used in tank mix or sequential combinations. refer to labels
of other herbicides for additional rotational crop restrictions.
• Restrictions for rotational cropping after the use of Stealth Herbicide are dependent
on the application use rate of Stealth Herbicide in the primary crop. The user
should thoroughly read the following restrictions to determine the rotational
crops for their specific situation, according to application use rate.

I. Rotational Crop Restrictions Following Applications of Stealth Herbicide to Field and
Row Crops

1. Application Rate less than or equal to 4.8 pts/A (2.0 lbs ai/A):
   (a) Crops which are labeled for preplant incorporated application may be planted
   the same season in which Stealth Herbicide was applied.
   (b) Sugar beets, Red beets and Spinach
      To avoid crop injury. DO NOT plant sugar beets, red beets or spinach for 12
      months following a spring application of Stealth Herbicide or 14 months
      following a fall application of Stealth Herbicide.
      These crops should not be planted for 18 months following a spring application
      of Stealth Herbicide or 20 months following a fall application of Stealth Herbicide
      if rainfall or irrigation was not sufficient to produce a crop.
      To ensure thorough mixing of soil prior to planting sugar beets, red beets and
      spinach, land should be plowed using a moldboard plow to a depth of 12 inches.
   (c) Proso millet, Sorghum (milo), and Annual or Perennial grass crops or mixtures
      Proso millet, sorghum (milo), and annual or perennial grass crops or mixtures
      should not be planted for 10 months after a spring application of Stealth
      Herbicide or 12 months after a fall application of Stealth Herbicide except in
      the following conditions:
      In the states of Minnesota, North Dakota and South Dakota, these crops should
      not be planted for 18 months following a spring application of Stealth Herbicide
      or 21 months following a fall application of Stealth Herbicide.
      To avoid the possibility of crop injury in areas that receive less than 20" of
      rainfall or irrigation to produce a crop, these crops should not be planted for 18
      months following a spring application of Stealth Herbicide or 20 months
      following a fall application of Stealth Herbicide if rainfall or irrigation was not
      sufficient to produce a field or row crop.
   (d) Wheat and Barley
      Wheat and barley may be planted 4 months after an application of Stealth
      Herbicide, except under the following conditions:
      If less than 12" of rainfall or overhead irrigation was received between
      application and rotational crop planting, wheat should not be planted before 12
      months after a spring application of Stealth Herbicide or 14 months after a fall
      application of Stealth Herbicide.
      In dryland areas and/or areas where irrigation is necessary to produce the crop
      treated with Stealth Herbicide, plant winter wheat or barley as a cover crop if
      crop failure/destruction occurs and land is followed during the summer.
Restrictions and Limitations
• **DO NOT** exceed 4.8 quarts of Stealth Herbicide per acre in any one crop season.
• Follow all precautions and restrictions on the labels of all products applied in combination with Stealth Herbicide. Always follow the most restrictive label.
• **DO NOT** apply Stealth Herbicide less than 50 days prior to alfalfa harvest for forage or hay.
• **DO NOT** apply Stealth Herbicide less than 90 days prior to alfalfa harvest for seed.
• Some stunting and chlorosis of the alfalfa may occur with postemergence applications.
• Applications made after the alfalfa exceeds 6 inches in height may result in poor weed control due to possible reduced spray coverage to the soil.

**CORN**
(Field, Pop, Seed, Sweet)

Stealth Herbicide may be applied by ground, air or chemigation.

Stealth Herbicide may be applied in conventional, minimum, or no-till as a preemergence, postemergence, or postemergence incorporated (Culti-Spray) application in field corn.

Stealth Herbicide may be applied in conventional tillage as a preemergence or postemergence application in sweet corn, seed corn, or popcorn.

**Regardless of tillage system, plant corn at least 1½ inches deep and completely cover with soil.**

In conventional tillage systems, plant into a seedbed that is firm and free of clods and trash. Use only where adequate tillage is practiced to provide good soil coverage of the corn seed.

In no-till systems, utilize a no-till planter that is capable of planting through crop residue. The use of no-till planters under conditions that do not allow good soil coverage of the corn seed can result in reduced crop stand or injury if Stealth Herbicide contacts the germinating corn seed. Check equipment to ensure good seed coverage.

Stealth Herbicide or Stealth Herbicide tank mix combination treatments are most effective in controlling weeds when adequate rainfall or overhead irrigation is received within 7 days after application. If cultivation is necessary because of soil crust or weed germination, use shallow tillage and make certain corn seeds are below the tilled area.

**Additional Weeds Controlled:** In addition to the weeds listed in Table 1, Stealth Herbicide will control the following weeds in corn with Culti-Spray application: wild proso millet and shattercane.

**Use Methods and Timings**

**Preemergence** - Apply after planting but before weeds and crop emerge.

**Postemergence** - Apply postemergence until field corn is 30 inches tall (20 to 24 inches tall for pop, seed and sweet corn) or in the VB growth stage, whichever is more restrictive. If the crop canopy prevents applications from reaching the soil, use drop nozzles and apply as a directed spray.

**Culti-Spray** - Apply Stealth Herbicide alone or Stealth Herbicide plus atrazine when field corn is at least 4 inches tall until last cultivation (layby). Stealth Herbicide plus atrazine must be applied before the field corn reaches 12 inches in height.

**DO NOT** exceed 1.2 lb ai per acre of atrazine, as specified on the atrazine label. Under situations of low rainfall or soil moisture when deep germinating weeds such as shattercane or field sandbur are anticipated, mechanical incorporation will provide best results. If cultivation is needed after application and incorporation of Stealth Herbicide, the depth of cut should be no deeper than the depth of cut used to incorporate.

**Chemigation Applications**

Stealth Herbicide may be applied through sprinkler irrigation systems. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions.

STEALTH® HERBICIDE
EPA REG. NO. 34704-868

COTTON

Stealth Herbicide may be applied by ground, air, or chemigation in conventional, minimum, stale seedbed, or no-till as a preplant surface, preplant incorporated, preemergence, or layby application in cotton.

Preplant surface, preemergence, and layby treatments are most effective in controlling weeds when adequate rainfall or overhead irrigation is received within 7 days after application. A shallow cultivation is recommended if soil crustling or soil compaction occurs. If weeds begin to germinate before adequate moisture is not received within 7 days after application, use shallow tillage (rotary hoe or light harrow) and make sure enough moisture is down to the tillage zone. The use of a postemergence herbicide treatment may be required to control weed escapes at planting or following cotton emergence.

Additional Weeds Suppressed: In addition to the weeds listed in Table 1, Stealth Herbicide will suppress Russian thistle in the state of Arizona.

Use Methods and Timings

Preplant Surface - Apply Stealth Herbicide up to 15 days prior to planting, Apply Stealth Herbicide tank mixes and sequential programs as specified under the tank mix section.

Preplant Incorporated - Apply Stealth Herbicide up to 60 days prior to planting and incorporate within 7 days of application. Apply Stealth Herbicide tank mixes and sequential programs as specified under the tank mix section.

Preemergence - Apply Stealth Herbicide at planting or up to 2 days after plan-ting. Apply to a seedbed that is firm and free of clods. Apply Stealth Herbicide tank mixes and sequential programs as specified under the tank mix section.

Preplant Incorporated followed by Preemergence - Apply Stealth Herbicide up to 60 days prior to planting and incorporate within 7 days of application. Apply overlay application of Stealth Herbicide at planting or up to 2 days after planting. Total amount of Stealth Herbicide applied per acre cannot exceed the highest labeled rate for a given soil type. Preplant incorporated and preemergence applications of Stealth Herbicide may be applied with the labeled tank mix herbicide(s).

Layby Application (at last cultivation) - Apply Stealth Herbicide directly to the soil between rows as a directed spray following the last normal cultivation (layby). Layby applications can be applied in cotton previously treated with Stealth Herbicide or any herbicide(s) registered for use in cotton. The labels of those herbicides for suggested treatments, rates to be used, and precautions or restrictions for use in cotton, and for follow-crop restrictions. The total amount of Stealth Herbicide applied per acre per season cannot exceed the labeled rate for a given soil type.

DO NOT apply as a broadcast spray over the top of the cotton or SERIOUS CROP INJURY CAN RESULT. AVOID CONTACT OF THE SPRAY to the non-woody portion of cotton stems and to cotton foliage or SERIOUS CROP INJURY CAN RESULT. To reduce the potential for crop injury caused by herbicide contact with cotton foliage and stems, use protective shields when conditions favoring spray drift occur.

Glyphosate-containing products may be applied with Stealth Herbicide at layby in cotton with the Roundup Ready® gene. DO NOT apply glyphosate-containing products at layby on non-Roundup Ready cotton. DO NOT apply Stealth Herbicide and glyphosate tank mix as a broadcast spray over the top of cotton or CRSP INJURY MAY RESULT.

Chemigation Applications

Stealth Herbicide may be applied through sprinkler irrigation systems. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions.

Fall Application - Stealth Herbicide may be applied for weed control in cotton in the fall after October 15 (up to 140 days prior to planting cotton) in Arizona, California, Louisiana, New Mexico, Mississippi, Oklahoma and Texas. Apply Stealth Herbicide at the broadcast rate of 2.4 pounds per acre on coarse or medium soils and 3.6 pounds per acre on fine soils.

</tbody>
</table>

1 DO NOT exceed 1.8 lbs/A on coarse-textured soils in California.
2 Not recommended for soils with more than 3% organic matter.

Restrictions and Limitations

• DO NOT apply Stealth Herbicide in no-till in California
• Preharvest Interval (PHI) is 60 days between the last Stealth Herbicide application and harvest.
• DO NOT feed forage or grazie livestock in treated cotton fields.
• DO NOT exceed the highest seasonal rate per acre for any given soil type.

EDIBLE BEANS

Dry, Lima, Snap, Chickpeas (Garbanzo Beans), Southern Peas (Cowpeas), and Sweet Lupines

Stealth Herbicide may only be applied (fall) preplant surface or preplant incorporated in chickpeas (garbanzo beans), dry beans, lima beans, snap beans, and Southern peas (cowpeas). Stealth Herbicide may be applied (fall) preplant surface or preplant incorporated or preemergence in sweet lupines.

Preemergence - Apply only to sweet lupines at planting or up to 2 days after planting. Apply to a seedbed that is firm and free of clods.

</tbody>
</table>

1 For use in North Dakota, South Dakota, Minnesota, Oregon, Washington, Montana, Idaho and Wyoming only.

Restrictions and Limitations

• DO NOT feed lupine hay and forage or graze livestock in treated lupine fields.
• DO NOT apply Stealth Herbicide more than once per cropping season.
• DO NOT apply in any type of irrigation system.

FORAGE LEGUMES

Stealth Herbicide may be used in forage legumes used as a cover crop in federal set-aside or conservation reserve program areas.

Some stand reduction of the legume cover crop may occur with this use. Consult local county extension service or the local ASC committee for recommended cover crops.

If loss of cover crop occurs due to adverse weather conditions, any crop registered for Stealth Herbicide preplant incorporated use can be replanted the same year into Stealth Herbicide-treated soil without adverse effects. If replanting is necessary, DO NOT rework the soil deeper than the Stealth Herbicide-treated zone. DO NOT feed or graze legume cover crops established following Stealth Herbicide application. The cover crop residue should ultimately be destroyed by tillage or left on the surface to retard erosion or as directed by the local ASC committee.

Use Methods, Timings, and Rates

Stealth Herbicide may be applied preplant incorporated or preemergence for weed control in legume cover crops.

1 GARLIC

Stealth Herbicide may be applied preemergence, postemergence, or split application by ground, air, or chemigation.

Use Methods and Timings

Preemergence - After planting but before crop and weeds emerge.

Postemergence - 1st to 5th true-leaf growth stage.

Split Application - At both preemergence and postemergence timings.

Chemigation Applications

Stealth Herbicide may be applied through sprinkler irrigation systems. Apply between the 2nd and 9th true-leaf stage (2nd to 6th true-leaf stage in California). DO NOT irrigate in excess of 0.5 inch of water. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions.

</tbody>
</table>

Restrictions and Limitations
- **DO NOT** exceed 3.6 pints per acre per crop (except Idaho, Oregon, and Washington).
- **DO NOT** apply within 60 days of harvest in California and within 45 days of harvest in all other states.
- **DO NOT** feed or graze these crops.

GRAIN SORGHUM
Uniformly apply Stealth Herbicide in water by ground equipment or by aircraft.

Stealth Herbicide may be applied as a postemergence incorporated (CULTI-SPRAY) application in grain sorghum grown in all states.

In addition, Stealth Herbicide may be applied early postemergence in grain sorghum grown in states east of the Mississippi River and in Arkansas, eastern Texas, Louisiana, and the Missouri "boothed."

**DO NOT** apply Stealth Herbicide in grain sorghum preplant incorporated or preemergence as serious crop injury can result. **DO NOT** apply Stealth Herbicide in grain sorghum more than once per crop season.

Additional Weeds Controlled: In addition to the weeds listed in Table 1, Stealth Herbicide as a CULTI-SPRAY application will control the following weeds in grain sorghum: wild proso millet and shattercane.

Use Methods and Timings
CULTI-SPRAY: Stealth Herbicide treatments can be applied from the 4-inch growth stage to as late as the last cultivation (layby) of grain sorghum. See specific directions for (CULTI-SPRAY) application under Application Instructions.

Early Postemergence: For use only in states east of the Mississippi River plus Arkansas, eastern Texas, Louisiana, and the "boothed" of Missouri.

The seedbed should be firm and free of clods and trash. Use only where adequate tillage is practiced to provide good seed coverage. Plant grain sorghum at least ½ inches deep to ensure good seed coverage.

*See Restrictions and Limitations for map of specific states.

NONBEARING FRUIT AND NUT TREE CROPS
and NONBEARING VINEYARDS
Stealth Herbicide may be applied for preplant incorporated, preplant surface, surface incorporated, or preemergence weed control in several nonbearing fruit and nut tree crops and nonbearing vineyards. Stealth Herbicide may be used before or after transplanting the following nonbearing crops:
- **almond**
- **brine**
- **prune**
- **grape**
- **pear**
- **tangerine**
- **grapefruit**
- **peach**
- **tangerine**
- **apricot**
- **nectarine**
- **plum**
- **cherry**
- **pistachio**
- **nut**
- **citrus**
- **English**

Apply the spray directly to the ground beneath the trees or vines. **DO NOT** apply over the top of trees or vines with leaves or buds. Contacting leaves, shoots, or buds with the spray mixture may cause malformed plant tissue. **DO NOT** apply to newly seeded nursery stock.

FOR NEWLY PLANTED AND ONE-YEAR-OLD GRAPEVINES:
- **DO NOT** apply to dormant grapevines.
- **DO NOT** apply if buds have started to swell. Application after buds have started to swell may result in leaf distortion.
- **DO NOT** apply to newly transplanted trees or vines until ground has settled and no cracks are present.

Use Methods, Timings and Rates
Stealth Herbicide may be applied by ground, air, chemigation or flooded basin irrigation systems.

Stealth Herbicide may be applied either in a single application or sequentially with an interval of 30 days or more. Apply Stealth Herbicide at 2.4 to 4.8 quarts per acre (depending on desired length of control; see chart below) per application, but not to exceed a total of 4.8 quarts per year in pome, stone and other fruit trees, and not to exceed a total of 7.3 quarts per year in citrus, nut trees and grapevines.

Preplant Surface - Prior to transplanting, uniformly apply with ground or aerial equipment. Avoid root contact with treated soil when placing transplants into the hole or injury may occur.

Preplant Incorporated - Uniformly apply Stealth Herbicide prior to transplanting but before weeds emerge. Incorporate Stealth Herbicide to a depth of 1 to 2 inches. Application and incorporation must be made prior to transplanting to avoid mechanical injury to the crop. Avoid root contact with treated soil when placing transplants into the hole or injury may occur.

Chemigation (postplant) - Applications may be made in a band or broadcast.

Flooded Basin Irrigation Systems
Stealth Herbicide may be applied in flooded basin irrigation systems. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions. **DO NOT** apply Stealth Herbicide-treated irrigation water over top of trees or vines with leaves or buds.

Use Rate per Acre

Wyoming only. Rainfall or irrigation is required for incorporation and activation. Unpredictable weed control can be expected since factors such as length of time between application and planting as well as uncontrollable weather factors will determine herbicide activity and longevity.

Apply Stealth Herbicide and incorporate (via rainfall, irrigation or mechanically) in late fall prior to planting lentils or peas (English, dry, garden, dwarf, green, pigeon, and edible pod) the following spring. Apply Stealth Herbicide in the late fall when soil temperatures are 45°F or below but before the ground freezes.

**DO NOT** apply when the air temperature is below 45°F.

*For use in North Dakota, South Dakota, Minnesota, Oregon, Washington, Montana, Idaho, and Wyoming only.

Restrictions and Limitations
- **DO NOT** use in California.
- **DO NOT** apply Stealth Herbicide preemergence in peas.
- **DO NOT** apply Stealth Herbicide more than once per cropping season.
- **DO NOT** apply to peas, lentils, pea or lentil forage, pea silage, pea hay, or pea straw grown for livestock feed.
- **DO NOT** apply in any type of irrigation system.
- Any crop registered for a preplant incorporated application of Stealth Herbicide can be double cropped after peas.
Restrictions and Limitations
- DO NOT feed forage or graze livestock in treated fields.
- DO NOT apply more than 4.8 quarts of Stealth Herbicide per acre per year in pome, stone and other fruit trees.
- DO NOT apply more than 7.3 quarts of Stealth Herbicide per acre per year in citrus, nut trees and grapes.

ONIONS
(Direct-Seeded and Transplanted Dry Bulb)
and STALLLOTS (Dry Bulb)
Stealth Herbicide may be applied by ground, air or chemigation.

Chemigation Applications
Stealth Herbicide may be applied through sprinkler irrigation systems. Apply between the 2nd and 9th true-leaf stage (2nd to 6th true-leaf stage in California) unless otherwise specified below. DO NOT irrigate in excess of 0.5 inch of water. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions.

State-Specific Instructions
In All States Except California:
Apply Stealth Herbicide as a broadcast treatment when onions or shallots have 2 to 9 true leaves.

Additional Use in Colorado, Kansas, and Nebraska:
Stealth Herbicide may be applied sequentially in seeded onions. Apply first application of Stealth Herbicide at loop stage. Apply sequential application of Stealth Herbicide early postemergence (2nd to 9th true-leaf stage). DO NOT exceed the maximum labeled rate for a given soil texture. DO NOT apply Stealth Herbicide at loop stage through the 9th true-leaf stage if heavy rains are expected, or severe crop injury may result.

Additional Use in Colorado and the High Plains of Texas:
For transplanted onions only, apply and shallow incorporate (less than 2' deep) Stealth Herbicide into preformed beds prior to transplanting.

Additional Use in Idaho, Oregon, and Washington:
Apply Stealth Herbicide as a broadcast treatment when onions or shallots are between the flag leaf to 9th true-leaf stage.

Stealth Herbicide may be used at 3.6 to 4.8 points per acre for dodder control on medium- and fine-textured soils.

DO NOT apply Stealth Herbicide using chemigation at the dodder control rate.

Stealth Herbicide may be applied in the fall or spring to the furrow area of land bedded in the fall in preparation for planting seed of dry bulb onions the following spring. Apply Stealth Herbicide as a banded application at rates based on appropriate soil texture. Band width should be approximately ½ the width of the row spacing. Keep Stealth Herbicide away from the area where onion seed will be planted. Narrow-off tops of beds following Stealth Herbicide furrow applications prior to transplanting onions. For selective weed control in the onion row, apply Stealth Herbicide as a banded postemergence application to flag leaf onions at the labeled rates based on soil texture. Apply Stealth Herbicide only once to the furrow area and once to the onion row as a postemergence application.

Additional Use in Michigan:
For mineral soils containing >10% organic matter, follow the directions for muck soils (see below).

In California:
Stealth Herbicide may only be applied as a single application when onions or shallots have 2 to 6 true leaves.

Restrictions and Limitations (Mineral Soils)
- DO NOT mechanically incorporate except as specified for use on dry bulb onions in Colorado and the Texas High Plains.
- DO NOT exceed 3.6 points per acre per crop (except Idaho, Oregon, and Washington).
- DO NOT apply within 60 days of harvest in California and within 45 days of harvest in all other states.
- DO NOT feed or graze these crops.
- DO NOT apply Stealth Herbicide preemergence through the loop stage if heavy rains are expected or severe crop injury may result. If irrigating immediately after Stealth Herbicide application at the preemergence through loop stage, DO NOT irrigate in excess of 0.5 inch of water.

Muck Soils
Use Rates, Methods and Timings
Stealth Herbicide may be applied sequentially on muck soils as follows:

<table>
<thead>
<tr>
<th>Application Timing and Growth Stage</th>
<th>Rate (pts/A)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preemergence through Loop Stage</td>
<td>4.6</td>
</tr>
<tr>
<td>Early Postemergence (2nd to 6th true-leaf stage)</td>
<td>4.8</td>
</tr>
<tr>
<td>Late Postemergence (6th to 9th true-leaf stage)</td>
<td>4.8</td>
</tr>
</tbody>
</table>

Restrictions and Limitations (Muck Soils)
- DO NOT apply to muck soils in California.
- DO NOT apply within 45 days of harvest.
- DO NOT feed or graze these crops.
- DO NOT apply more than 14.4 points per acre per growing season on muck soils. To maximize crop safety, ensure good soil coverage during planting or transplanting and well-timed preemergence applications to the loop stage, if possible.
- DO NOT apply Stealth Herbicide preemergence through the loop stage if heavy rains are expected or severe crop injury may result. If irrigating immediately after Stealth Herbicide application at the preemergence through loop stage, DO NOT irrigate in excess of 0.5 inch of water.
- DO NOT plant sugar beets, red beets, spinach, winter wheat, or winter barley as rotational crops on muck soils for 12 months from the time of last application if more than 3.6 points per acre of Stealth Herbicide is applied to the onion crop.
- If loss of onion crop occurs, DO NOT replant any crop other than onions in muck soil during the same cropping year and DO NOT work the soil deeper than 2 inches.

PEANUTS
Stealth Herbicide may be applied by ground, air, or chemigation.
Stealth Herbicide may be applied preplant incorporated in peanuts.
Stealth Herbicide may also be applied preemergence to peanuts grown under overhead irrigation.

DO NOT use in California.

Use Methods and Timings
Preplant Incorporated - Apply Stealth Herbicide up to 60 days prior to planting and incorporate within 7 days after applications.

Preemergence - Apply Stealth Herbicide at planting or up to 2 days after planting and before crop emergence. To prevent decreased crop pegging, adequate incorporation must be achieved by applying a minimum of 0.75 inch of overhead irrigation or rainfall within 48 hours of application.

Chemigation Applications
Stealth Herbicide may be applied through sprinkler irrigation systems. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions.

Use Rates
Region | Rate (pts/A)
---|---
Texas, Oklahoma and New Mexico | 1.2 to 2.4
Other peanut growing states* | 2.4

* For heavy weed infestations, especially of Texas panicum, up to 3.6 pts/A of Stealth Herbicide can be used in Alabama, Georgia or Florida.

POTATOES
Stealth Herbicide may be applied by ground, air, or chemigation.
Stealth Herbicide may be applied preemergence, preemergence incorporated, or early postemergence in potatoes.

Additional Weeds Controlled: In addition to the weeds listed in Table 1, Stealth Herbicide will control stinging nettle in potatoes.

Use Methods and Timings
Preemergence - Apply Stealth Herbicide after planting, but before potatoes and weeds emerge, or after dragoff.

Preemergence Incorporated - Apply Stealth Herbicide and incorporate after planting but before potatoes and weeds emerge. Where dragoff is practiced, apply Stealth Herbicide and incorporate before, at, or after dragoff, but before potatoes and weeds emerge. Incorporate Stealth Herbicide within 7 days of application. Stealth Herbicide must be thoroughly and uniformly incorporated into the top 1 to 2 inches of soil. Mechanical incorporation is not required if adequate rainfall for good crop and weed emergence occurs or irrigation is received within 7 days after application. Care must be taken so that incorporation equipment does not damage seed pieces or elongating sprouts.

Early Postemergence - Apply Stealth Herbicide from crop emergence to the 6-inch stage of growth. DO NOT apply Stealth Herbicide postemergence if potatoes are under stress from cold/wet or hot/dry conditions or crop injury may occur.

Chemigation Applications
Stealth Herbicide may be applied through sprinkler irrigation systems. Apply Stealth Herbicide preemergence after planting, after dragoff, or early postemergence through sprinkler irrigation systems. Follow all recommendations, special instructions and precautions in the general section covering Chemigation in Spraying Instructions.

Restrictions and Limitations
- **DO NOT** apply to sweet potatoes or yams.
- **DO NOT** apply to rice fields if the irrigation system includes flood or field crops.
- **DO NOT** apply to rice fields if they are subjected to flooding, especially catfish or crayfish farming.
- **DO NOT** apply to rice fields that are harvested for silage or forage.
- **DO NOT** apply to rice fields that are used for livestock or forage crops.
- **DO NOT** apply to rice fields that are used for wetland or marshland farming.
- **DO NOT** apply to rice fields that are used for greenhouse or hoop house farming.

RICE
Stealth Herbicide may be applied as a delayed preemergence application in drills of dry-seeded rice or as an early postemergence application in dry-seeded rice. Treatments may be applied to conventional, reduced or minimum tillage, and no-till (state seeded) rice. The seedbed should be firm and free of cobs and must be prepared to allow for good seed coverage. The use of a planter under conditions that do not allow good soil coverage of the rice seed can result in reduced stand or stunting if Stealth Herbicide contacts germinating rice seed.

Additional Weeds Controlled: In addition to the weeds listed in Table 1, Stealth Herbicide will control the following weeds in rice: spurge, junglerice, and saltgrass.

Use Methods and Timings

Delayed Preemergence - Apply Stealth Herbicide alone or with tank mix partner for delayed preemergence weed control in grain-drawn, dry-seeded rice. Apply Stealth Herbicide alone or a tank mixture to leaves before the leaves are pulled and planted. Exposed seeds that come in contact with Stealth Herbicide may be injured. Apply only when growing conditions favor vigorous rice growth. The seedbed should have adequate moisture for seed germination. For use in California.

Uniformly apply the recommended rate of Stealth Herbicide after rice planting and before rice and weed emergence (spiking). Apply after the rice seed has absorbed water and germinated and after the soil has been thoroughly tilled over the seed by at least 1 inch of rainfall or by irrigation (flush). If the soil has not been seeded by rain or flush, apply when 80 percent of germinated seeds have a primary root (radicle) or shoot at least 1/4-inch long. If there is insufficient moisture, flushing is recommended before Stealth Herbicide application. Apply moisture for root (radicle) initiation and for vigorous rice and weed growth.

If applied to soil prior to these conditions or to cracked soil, stand reduction or stunting of rice may occur. Under some conditions, use of gibberellic acid-treated seed, heavy rainfall after application, or flushing after application may result in herbicide injury to rice. Rice can overcome moderate injury with appropriate cultural practices.

Due to the residual activity of Stealth Herbicide, this treatment may be applied if rice is too small to maintain a flood on the field for weed control. However, proper water management practices must be followed for normal rice growth and activity of Stealth Herbicide.

Early Postemergence - Apply Stealth Herbicide as a tank mix. Base applications on weed and crop size guidelines of the tank mix partner. DO NOT apply to fields with standing water. If necessary, fields may be flushed prior to treatment to produce vigorous rice and weed growth. Since soil and weeds must be completely exposed to spray coverage, no flood water should be on the field at the time of application. Closely spaced soil, standing water or field cracks, the soil at the time of application, or cracks in the soil that form after application may result in reduced weed control. Because of residual activity of Stealth Herbicide, this treatment may be applied if rice is too small to maintain a flood on the field for weed control. However, proper water management practices must be followed for normal rice growth and activity of Stealth Herbicide.

Since the residual activity of Stealth Herbicide is activated by moisture, Stealth Herbicide is most effective in controlling emerging weeds when adequate rainfall or irrigation (flush) is received within 7 days after application.

- **DO NOT** apply to rice fields in Texas.
- **DO NOT** apply to rice fields in Utah.
- **DO NOT** apply to rice fields in Vermont.
- **DO NOT** apply to rice fields in Virginia.
- **DO NOT** apply to rice fields in Washington.
- **DO NOT** apply to rice fields in West Virginia.
- **DO NOT** apply to rice fields in Wisconsin.
- **DO NOT** apply to rice fields in Wyoming.

Soybeans
Stealth Herbicide may be applied in conventional, minimum, or no-till as a fall surface, fall incorporated, preplant surface, preplant incorporated, or preemergence application in soybeans. Additional Weeds Controlled: In addition to the weeds listed in Table 1, Stealth Herbicide will control or reduce competition from the following weeds in soybeans: itchgrass and red rice. For specific rates for red rice and itchgrass management, see Table 4 at the end of this section.

Use Methods and Timings

Fall Applied - Stealth Herbicide may be applied or incorporated in the fall after fall harvest and prior to ground freeze in states north of I-80 and the entire states of Iowa, Illinois, Indiana, Kansas, Kentucky, Missouri, Nebraska, Ohio, Oklahoma, and Texas. Fall applications of Stealth Herbicide will not provide season-long weed control.

Preplant Surface - Apply Stealth Herbicide up to 15 days prior to planting. Stealth Herbicide may be applied up to 45 days prior to planting when used in a tank mix or applied sequentially with Extrellect, Rapport, or Pursuit herbicides. Apply Stealth Herbicide tank mixes and sequential programs as specified under the tank mix section.

Preplant Incorporated - Apply Stealth Herbicide up to 60 days prior to planting and incorporate within 2 days after application.

Preemergence - Apply Stealth Herbicide at planting or up to 2 days after planting. Apply to a firm seedbed of cobs. DO NOT make applications of Stealth Herbicide preemergence north of Interstate 80, except in the states of Indiana, Michigan, and Ohio, or as specified in Loveland Products, Inc. supplemental labeling.

**DO NOT** exceed 1 application per crop season at the highest rate per acre for any given soil type and application method.

**SUGARCANE**

Use Methods and Timings
Stealth Herbicide may be applied preemergence through layoff to plant to ratoon sugarcane. Applications may be made by hand or broadcast. Although there may be adequate crop tolerance for postemergence applications at layoff the spray must be directed under the sugarcane canopy in order to obtain effective weed control.
Stealth Herbicide must be thoroughly and uniformly incorporated into the soil with either (a) mechanical incorporation equipment as outlined below, or (b) with rainfall or irrigation. If rainfall or irrigation is adequate for good crop and weed emergence and received within 7 days after application. If rainfall or irrigation is not obtained, Stealth Herbicide should be mechanically incorporated.

Mechanical Incorporation
Stealth Herbicide should be applied to loosened beds and incorporated into the top 1 to 2 inches of soil within 7 days after application.

Use Rates

</tr>
</tbody>
</table>

¹ Use the high rate if: clay soils; no mechanical incorporation is planned; heavy weed populations are anticipated; itchgrass infestation is anticipated; shoveling is planned.

Restrictions and Limitations:
- **DO NOT** exceed 14.4 pints of Stealth Herbicide per acre in one growing season.
- **DO NOT** use less than 11 gallons of water as a carrier when applying Stealth Herbicide for weed control.
- Ratoon sugarcane must be lightly shaved in early spring to remove the old stubble before incorporation over the line of sugarcane is possible. Carefully adjust equipment to incorporate without causing excessive damage to emerging shoots.
- **DO NOT** make applications at close-in because complete and uniform coverage cannot be obtained.
- **DO NOT** apply through any type of irrigation system.
- **DO NOT** apply within 90 days of harvest.
- **DO NOT** graze treated fields or feed treated forage or fodder to livestock.

SUNFLOWERS
Stealth Herbicide may be applied preplant incorporated in all states. Fall preplant incorporated applications may be made in North Dakota, South Dakota and Minnesota only. Stealth Herbicide may be applied pre-emergence in conventional tillage sunflowers, except in the state of California.

Plant sunflowers 1.5” to 2” deep and completely cover with soil.

Use Methods and Timings
Preplant Incorporated (Spring) - Apply up to 60 days prior to planting and incorporate within 7 days after application.

Preplant Incorporated (Fall applications in North Dakota, South Dakota and Minnesota) - Apply Stealth Herbicide and immediately incorporate in late fall prior to planting sunflowers the following spring. Apply Stealth Herbicide in the late fall when soil temperatures are 45°F or below but before the ground freezes. **DO NOT** apply when the air temperature is below 45°F.

Prior to sunflower planting in the spring, fields treated with Stealth Herbicide should receive at least one shallow additional incorporation. Spring incorporation should be at an angle to the last tillage operation.

Preemergence - Apply Stealth Herbicide at planting or up to 2 days after planting. Preemergence applications of Stealth Herbicide to sunflowers may increase the likelihood of crop injury, especially when sunflowers are grown in stress situations, such as compacted soils. Decreased herbicide performance compared to preincorporated applications may also result from a preemergence application. If dry conditions with limited precipitation exist or unreasonably cool temperatures following planting are forecast, apply Stealth Herbicide prior to planting and mechanically incorporate with tillage.

² For use in North Dakota, South Dakota and Minnesota only.

NOTT SUNFLOWERS
Stealth Herbicide may be applied at 3.6 pints per acre up to 30 days before planting (preplant) to immediately after planting (preemergence).

Restrictions and Limitations (all tillage types):
- **DO NOT** apply Stealth Herbicide postemergence.
- **DO NOT** feed forage or graze livestock in treated sunflower fields.
- **DO NOT** use in California.

TOBACCO
Stealth Herbicide may be applied preplant incorporated or as a layby application in transplanted tobacco.

Use Methods and Timings
Preplant Incorporated - Apply Stealth Herbicide with ground sprayer up to 60 days prior to transplanting tobacco and incorporate within 7 days after application.

Applied according to directions and under normal growing conditions, Stealth Herbicide will not harm transplanted tobacco. Under stress conditions for plant growth such as cold/wet or hot/dry weather, Stealth Herbicide can produce a temporary retardation of tobacco development.

Layby - Stealth Herbicide may be applied as a directed spray following the last normal cultivation (layby), usually 4 to 6 weeks after transplanting tobacco. Apply Stealth Herbicide in a 16- to 24-inch band between the crop rows. The spray should not contact tobacco plants.

Storage and Disposal

DO NOT contaminate water, food, or feed by storage and disposal.

Pesticide Storage: **DO NOT STORE BELOW 40°F.** Extended storage at temperatures below 40°F can result in the formation of crystals on the bottom of the container. If crystallization does occur, store the container on its side at room temperature (70°F) and rock occasionally until crystals redissolve.

Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of federal law. If these wastes cannot be disposed of by use according to label directions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling: Nonrefillable container. Do not reuse this container to hold materials other than pesticides or dilute pesticides (rinsets). After emptying and cleaning, it may be allowable to temporarily hold rinsate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Once cleaned, some agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer, or manufacturer, or contact The Agricultural Container Recycling Council (ACRC) at www.acrcycle.org. If not recycled, then puncture and dispose of in a sanitary landfill, or incineration, if allowed by state and local authorities. If burned, stay out of smoke.

Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

For packages up to 5 gallons) Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

For packages greater than 5 gallons or 50 lbs) Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinsate into
Storage & Disposal cont'd:

application equipment or a mix tank or store rinseate for later use or disposal.
Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

(For square bottom caged totes greater than 55 gals): Triple rinse or pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Fill the container about 1/4 full with water, rinsing down all sides inside the container thoroughly. Recirculate water with the pump for 2 minutes. Empty the rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Repeat this procedure two more times.

(For refillable containers): Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinseate into application equipment or rinseate collection system. Repeat this rinsing procedure two more times.

For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC - 1-800-424-9300.

(Bold italic wording used to distinguish Disposal language for different container sizes.)

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY
BEFORE BUYING OR USING THIS PRODUCT, read the entire Directions for Use and the following Conditions of Sale and Limitation of Warranty and Liability. By buying or using this product, the buyer or user accepts the following Conditions of Sale and Limitation of Warranty and Liability, which no employee or agent of LOVELAND PRODUCTS, INC. or the seller is authorized to vary in any way.

Follow the Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop or other plant injury, ineffectiveness, or other unintended consequences may result from such risks as weather or crop conditions, mixture with other chemicals not specifically identified in this product's label, or use of this product contrary to the label instructions, all of which are beyond the control of LOVELAND PRODUCTS, INC. and the seller. The buyer or user of this product assumes all such inherent risks.

Subject to the foregoing inherent risks, LOVELAND PRODUCTS, INC. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use when the product is used in strict accordance with such Directions for Use under normal conditions of use, EXCEPT AS WARRANTED IN THIS LABEL AND TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS PRODUCT IS SOLD "AS IS," AND LOVELAND PRODUCTS, INC. MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR ELIGIBILITY OF THIS PRODUCT FOR ANY PARTICULAR TRADE USAGE.

IN THE UNLIKELY EVENT THAT BUYER OR USER BELIEVES THAT LOVELAND PRODUCTS, INC. HAS BREACHED A WARRANTY CONTAINED IN THIS LABEL AND TO THE EXTENT REQUIRED BY APPLICABLE LAW, BUYER OR USER MUST SEND WRITTEN NOTICE OF ITS CLAIM TO THE FOLLOWING ADDRESS: LOVELAND PRODUCTS, INC., ATTENTION: LAW DEPARTMENT, P.O. BOX 1286, GREELEY, CO 80632-1286.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE BUYER'S OR USER'S EXCLUSIVE REMEDY FOR ANY INJURY, LOSS, OR DAMAGE RESULTING FROM THE HANDLING OR USE OF THIS PRODUCT, INCLUDING BUT NOT LIMITED TO CLAIMS OF BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, STRICT LIABILITY, OR OTHER TORTS, SHALL BE LIMITED TO ONE OF THE FOLLOWING, AT THE ELECTION OF LOVELAND PRODUCTS, INC. OR THE SELLER: DIRECT DAMAGES NOT EXCEEDING THE PURCHASE PRICE OF THE PRODUCT OR REPLACEMENT OF THE PRODUCT, TO THE EXTENT CONSISTENT WITH APPLICABLE LAW; LOVELAND PRODUCTS, INC. AND THE SELLER SHALL NOT BE LIABLE TO THE BUYER OR USER OF THIS PRODUCT FOR ANY CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES, OR DAMAGES IN THE NATURE OF A PENALTY.
