Best results are obtained when weeds are in the early stages of growth and prior to blooming.

8. Annual Bluegrass (Poa annua) Control Prior to Overseeding

Apply this product at 2.0 ounces per acre prior to overseeding warm-season turf with perennial grasses. High applications after Poa annua germination and to 10 days prior to overseeding.

8.7 Transition of Overseeded Perennial Ryegrass (Lolium perenne) Control

Best results are obtained by applying this product at 1.25 ounces per acre followed by a second application of 1.25 ounces per acre at 10 to 12 weeks after the initial treatment. For best results, apply the initial treatment of this product at 14 to 20 weeks after overseeding when warm-season grasses have germinated and are visible in the lawn or field areas. Applications should be made when overseed is actively growing and when 2 to 4 leaf stage, prior to blooming. If a single application is preferred, apply this product at 1.5 ounces per acre. When overseed is in cool season turf types apply this product at 1.0 ounces per acre plus at least 0.5 pounds active ingredient per acre. This treatment will provide both pre-emergence and residual control of most grasses.

9. Additional Weeds Controlled

For control exclusive of suppressions of annual or perennial weeds listed in this section, apply this product at 1.25 ounces per acre at the higher rate of this product for control in areas of established, dense weed infestations. If using an application of 1.25 ounces per acre for the initial treatment, a second application of 1.25 ounces per acre may be made 4 or more weeks after the initial treatment, if needed. For best results, do not apply more than 2 total applications of this product per year. When using this product, weed infestations must be controlled. Applications should be made when the weeds are in the early stages of growth and prior to blooming.

10. Native Grasses

This product generally has been shown to be safe for use on the non-native native grasses listed in this section.

11.0 LIMIT OF LIABILITY AND LIABILITY

Monsanto Company warrants that this product conforms to the chemical description on the label and is reasonably fit for the purpose set forth in the Directions for Use. Monsanto Company shall not be liable to the user under any theory of liability, including negligence, strict liability, other tort or otherwise, for any loss or injury to the user or to the user’s property which results from the use of this product except in accordance with this Company’s stewardship requirements and with express written permission from the Company. Upon opening and using this product, buyer and all users are deemed to have accepted the terms of this MONOGRANT-LIABILITY AND LIABILITY and the terms of any and all other agreements, if any. The Company hereby disclaims any and all warranties, express or implied, as to the merchantability or fitness of this product for any purpose. This warranty is in lieu of all other warranties, expressed or implied, and the Company shall not be liable for any consequential or incidental damage, direct or indirect, of any kind, resulting from the use of this product.

Monsanto Company is not responsible for any product other than this product, unless it has been determined by Monsanto Company that the product purchased is identical with the product this Company has stewardship requirements for and with express written permission from the Company.

9.0 ORNAMENTALS

This product is for use in newly established, permanent grasses and non-native ornamental grasses. For control exclusive of suppressions of weeds listed in this section, apply this product at 1.25 ounces per acre at the higher rate of this product for control in areas of established, dense weed infestations. If using an application of 1.25 ounces per acre for the initial treatment, a second application of 1.25 ounces per acre may be made 4 or more weeks after the initial treatment, if needed. For best results, do not apply more than 2 total applications of this product per year.
Storage and Disposal
Store under conditions that avoid heat, light, and moisture.绿豆蛙fed not for use by children. For professional use only.

How to identify nutsedge:
- Triangular stem.
- Dark brown roots.
- Nodules on underground stems.

Central Tough Weeds in Residential and Commercial Turf with Certainty™
- Broadleaf
- Grubs
- Moles
- Termites

Certainty is theolicitafestic or imititation for
central tough weeds in turf. It is also effective in
treating grubs, moles, and termites.

Keep out of reach of children.

CAUTION: Hazardous if swallowed, inhaled, or absorbed through the skin.
