FORBID 4F has been evaluated for phytotoxicity on a wide range of ornamental plants. However, due to the large number of species and varieties of ornamental plants, it is impossible to test mixture with other products and adjuvants, test the mixture on a small number of plants for phytotoxicity prior to widespread use. Before using FORBID 4F in tank includes rotation with other treatments with different modes of action. Recommended. Use FORBID 4F as a part of a sound resistance management program that demonstrate no cross-resistance. However, repeated use of any plant protection product may increase the development of resistant strains of pests, including insects and mites. FORBID 4F contains an active ingredient with a novel mode of action. Studies to determine compatibility with other recommended pesticides, fertilizers and micronutrients. The proper mixing procedure for FORBID 4F alone or in tank mix combinations with other pesticides is:

FORBID 4F has been evaluated for phytotoxicity on a wide range of ornamental plants. However, be used safely prior to commercial use. In a small area, test the recommended rates on a small number of plants for phytotoxicity prior to widespread use. Before using FORBID 4F in tank mix applications, thoroughly check the compatibility of FORBID 4F with all tank mix components. Compatibility testing is recommended as compatibility requirements can vary among ornamental species. Most grower trials indicate that FORBID 4F is compatible with other pesticides and fertilizers. However, to ensure plant safety, it is important to perform a compatibility test, especially when mixing FORBID 4F with other pesticides. Compatibility tests should be performed in a controlled environment using plant species that are expected to be sprayed with FORBID 4F. If the combination remains mixed, or can be readily re-mixed, the mixture is considered physically compatible. FORBID 4F is physically and biologically compatible with many registered pesticides and fertilizers or micronutrients. Do not use on vegetable gardens.

Use of FORBID 4F on ferns, English ivy (Hedera helix), lily-of-the-Valley (Convallaria majalis), Japanese ivy (Hedera japonica), poinsettia (Euphorbia pulcherrima), sweet william (Dianthus barbatus), geraniums (Pelargonium spp.), coleus (Coleus blumei), impatiens (Impatiens spp.), Mexican heather, fuschia, geraniums (Pelargonium spp.), dracaena (Dracaena spp.), and crotons (Codiaeum spp.) is not recommended. The use of any pesticide in a manner that may kill or otherwise harm endangered species or adversely modify their habitat is a violation of Federal law.

Do not apply via chemigation. Use of FORBID 4F in successive miticide applications during the same growing season is not recommended. Using FORBID 4F in successive miticide applications may increase the development of resistant strains of pests, including insects and mites. However, repeated use of any plant protection product may demonstrate no cross-resistance. However, repeated use of any plant protection product may decrease the efficacy of the product.

Do not apply when winds are greater than 15 mph and avoid gusty conditions. Do not use on plants intended for use as feed or forage. Do not use on ornamental species or stunted species that may freeze.

FORBID 4F is packaged in polyethylene containers. Do not allow product or containers to freeze.

When considering mixing FORBID 4F with other pesticides or other additives, first contact your supplier for advice. For further information, contact your local Bayer representative. If your supplier and Bayer representative have no experience with the combination you are considering, you should conduct a test to determine physical compatibility.

• While recirculating and with the agitator running, add any products in PVA bags. Allow time for thorough mixing;
• Fill the spray tank 1/4 to 1/3 full with clean water; • Add the required amount of FORBID 4F, and any other “flowable” (FL or SC) type products; • Add any other wettable powder (WP) or wettable granules (WG) products; • Add any remaining tank mix components: emulsifiable concentrates (EC), fertilizers and micronutrients.

To ensure uniform coverage of the ornamental plants, use a suitable method to contain spills and/or rinsate. Properly empty and triple-rinse pesticide containers at time of use.

Bayer CropScience LP to eliminate all risks associated with the use of this product. As a result, crop injury or ineffectiveness is always possible. All such risks shall be assumed by the user or buyer.

For professional use only. For control of aphids, leafhoppers, lace bugs, mites, thrips, whiteflies, scale insects, and soft scale on ornamental species and residential or commercial buildings. Read all precautions carefully. Read and follow all label directions. See separate worksheet for dilution and application rate per species.

Forbid 4F contains 4 pounds of spiromesifen per US gallon (480 grams ai per liter).

Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash clothing before reuse.

Mixers, loaders and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemically-resistant gloves
- A hand respirator

CAUTION
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

• Have person sip a glass of water if able to swallow.

IF SWALLOWED:
• Call a poison control center or doctor immediately for treatment advice.

IF INHALED:
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• As soon as possible, wash thoroughly and change into clean clothing.
• Wash the outside of gloves before removing.
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

GENERAL INFORMATION
FORBID® 4F is a Flowable (Suspension Concentrate) formulation that is intended for control of mites and whiteflies on ornamental plants, flowers and foliage plants. The active ingredient contained in FORBID 4F is active on all mite species and on all stages of whiteflies. FORBID® 4F is a broad-spectrum product with effective control of mites and whiteflies. It is also effective against several limited target insect pests and is useful for ornamental plant, flower and foliage protection.

Applications must not be made on ornamental plants, flowers and foliage plants. The active ingredient contained in FORBID 4F is active on all mite species and on all stages of whiteflies. FORBID® 4F is a broad-spectrum product with effective control of mites and whiteflies. It is also effective against several limited target insect pests and is useful for ornamental plant, flower and foliage protection.

HOW TO APPLY

The 2 fl oz rate of FORBID 4F is recommended for initial applications and for treatments where a small increase in pest population is noted. Recommended rates for initial treatments are 1.4 to 2 fl oz (40 - 60 mL)/100 gallons of spray solution. Two applications may be necessary to control adult whiteflies. Applications should target these stages.

An adjuvant may be used to improve coverage on hard to wet foliage. For best results the treatment should be made when the whitefly or mite population begins to build and before a damaging population becomes established. Rate range is provided and optimum performance. Performance evaluations should be made 4 - 10 days after application. One application can contain water through or through drift of spray in wind. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. A level, well maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, irrigation canals and large ditches is recommended. Use a 2:1 ratio of product container or label with equivalent promptly after emptying. Use of product is subject to the terms and conditions of this label. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, irrigation canals and large ditches is recommended. Use a 2:1 ratio of product container or label with equivalent promptly after emptying. This product may contaminate water through runoff or through drift of spray in wind. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, irrigation canals and large ditches is recommended.
Forbids 4F 8 oz 3849531C 090417AV2 etl 012612: Forbids 4F 8 oz 3849531C 090417AV2 etl 012612

• Long-sleeved shirt and long pants • Shoes plus socks

Personal Protective Equipment (PPE):

• Have person sip a glass of water if able to swallow.

SWALLOWED:

IF OR CLOTHING:

• Take off contaminated clothing.

IF ON SKIN

you when calling a poison control center or doctor, or going for treatment.

• Chemical resistant gloves (such as natural rubber, selection category A) • Shoes plus socks • Long-sleeved shirt and long pants

For MEDICAL And TRANSPORTATION Emergencies ONLY Call 24 Hours A Day 1-800-334-7577

• Do not give anything by mouth to an unconscious person.

• Call a poison control center or doctor for further treatment advice.

• If person is not breathing, call 911 or an ambulance, then give artificial respiration.

• Call a poison control center or doctor for treatment advice.

2 vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, lakes, streams, and hot water. Keep and wash PPE separately from other laundry.

3 Not for use on plants being grown for sale or commercial production, or for commercial seed production, or for research purposes. For use on plants intended for aesthetic purposes or climatic modification in areas such as landscapes, campgrounds, golf courses, athletic fields, parks, gardens, rights of way and other easements, and highly revegetated or landscaped areas. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. A level, well maintained and integrated system of drainage and water control is needed to reduce runoff containing this product. Dry or clayey soils reduce the potential for runoff from this product.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and aquatic invertebrates. Avoid contamination of surface water through runoff or spray drift from spray in wind. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA office.

USER SAFETY RECOMMENDATIONS

Wash the outside of gloves before removing.

• Remove Personal Protective Equipment immediately after handling this product.

• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

• Wash hands after removing gloves or other PPE.

• Wash outside of all clothing.
Forbid 4F 8 oz 3849531C 090417AV2 etl 012612: Forbid 4F 8 oz 3849531C 090417AV2 etl 012612 1/26/12 3:06 PM Page 2

Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash clothing before reuse.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

SWALLOWED:

- Have person sip a glass of water if able to swallow.
- Call a poison control center or doctor immediately for treatment advice.

IF IN THE EYES:

- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Take off contaminated clothing.

IF INHALED:

- Call a poison control center or doctor for treatment advice.

If the product gets inside, then:

- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- As soon as possible, wash thoroughly and change into clean clothing.
- Remove Personal Protective Equipment immediately after handling this product.

Note to Physician:

you when calling a poison control center or doctor, or going for treatment.

No specific antidote is known. Treat symptomatically. Have a product container or label with you when calling a poison control center or doctor, or going for treatment.

• Chemical resistant gloves (such as natural rubber, selection category A) • Shoes plus socks

• Do not give anything by mouth to an unconscious person.
• Call a poison control center or doctor for treatment advice.

If contact with skin:

• Chemical resistant gloves (such as natural rubber, selection category A) • Shoes plus socks

• Do not give anything by mouth to an unconscious person.
• Call a poison control center or doctor for treatment advice.

User Safety Recommendations

First Aid

Do not give anything by mouth to an unconscious person. Call a poison control center or doctor for treatment advice.

Precautionary Statements

FIRST AID

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. If not washables, use detergent and hot water. If not washables, use detergent and hot water.

Environmental Hazards

This pesticide is toxic to fish and aquatic invertebrates. Avoid contamination of surface water through runoff or spray drift. Do not allow products to contact creek, river, stream, pond, pond, or other watercourse. If products are allowed to contact or enter surface water, it is necessary to use suitable absorbents, such as diatomaceous earth, to remove products or to control drift.

Hazardous to humans and domestic animals. Avoid contact with skin, eyes, and clothing.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

How to Apply

Apply specific dosage of FORBID 4F as needed for control. For best results, uniform coverage of the upper and lower leaf surfaces should be aimed for.

WHERE TO APPLY

This product is intended for use in outdoor landscaping. For use on ornamental plants, flowers and foliage plants. The active ingredient contained in FORBID 4F is active on all mite development stages. However, mite juvenile stages are often more susceptible than adults. Application should be timed to coincide with early threshold levels in a developing mite population.

This pesticide is also highly effective against whitefly nymphs, plus it has a significant effect on the otherwise difficult-to-control spider mite, boxwood spider mite, honeylocust spider mite, Euonymus spider mite, spruce spider mite, maple spider mite, red spider mite, rust mite, and blister mite. 

For use on plants intended for aesthetic purposes or climatic modification in areas such as residential, institutional, public, commercial, and industrial buildings.

Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate can result in environmental contamination.

Storage and Disposal

Storage:

Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of the reach of children, preferably in a locked cabinet.

Pesticide Disposal:

WARNING: It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Storage:

Controlled hazardous waste.

General Information

FORBID 4F is a Fungus Enzyme Complex Pesticide formulation that is composed of enzymes and other ingredients that degrade plant material. No active ingredient is used.
For PRODUCT USE Information Call 1-800-331-2867

DIRECTIONS FOR USE

FORBID® 4F is a Flowable (Suspension Concentrate) formulation that is intended for control of mites and whiteflies on ornamental plants, flowers and foliage plants. The active ingredient contained in FORBID 4F is active on all mite life stages. However, mite juvenile stages are often more susceptible than adults. Application should be timed to coincide with early threshold levels in a developing mite population.

Rate range is provided and is generally dependent on size of the plant and density of the foliage. Apply specific dosage of FORBID 4F as needed for control. For best results, uniform coverage of the upper and lower leaf surfaces is recommended. Avoid excess application that results in runoff from plant foliage. An adjuvant may be used to improve coverage on hard to wet foliage. For best results the treatment should be applied at optimum performance. Performance evaluations should be made 4 – 10 days after application.

FORBID 4F is also highly effective against whitefly nymphs, plus it has a significant effect on the otherwise difficult to control pupal stage. For best results against whitefly, applications should target these life stages.

For maximum efficacy against adult whiteflies, use the 4 fl oz rate of FORBID 4F. For heavy infestations, applications should target these stages.

APPLY WHERE TO

PRODUCT FEATURES

Controls all stages of whiteflies. Whiteflies (Including silverleaf, greenhouse, and sweetpotato whitefly) 2 to 4 fl. oz. (60 – 120 mL)/100 gallons

Tarsonemid mites (including broad mites and cyclamen mites) 2 to 4 fl. oz. (60 – 120 mL)/100 gallons

Spider mites (including twospotted spider mite, southern red mite, maple spider mite, spruce spider mite, honeylocust spider mite, Euonymus spider mite, boxwood spider mite, tumid mite and Lewis mite) 2 to 4 fl. oz. (60 – 120 mL)/100 gallons

False spider mites 2 – 6 mL/5 gallons of spray solution

Applies to ornamental plants, flowers and foliage plants. The active ingredient contained in FORBID 4F is active on all mite development stages. However, mite juvenile stages are often more susceptible than adults. Application should be timed to coincide with early threshold levels in a developing mite population.

GENERAL INFORMATION

FORBID 4F is a Flammable Complex Combustible formulation that is flammable and a fire hazard and will form flammable mixtures in any proportion with water. THIS PRODUCT IS NOT OF THE ALKYL PHOSPHATE CHEMISTRY AND IS NOT CONSIDERED TO BE A RELATION TO OR POSSESS SIMILAR PHYSICAL PROPERTIES TO THE ALKYL PHOSPHATE PESTICIDES. FORBID 4F can be used to treat plants that are sensitive to certain classes of insecticides or pesticides. Applications may be made by the grower, retailer or applicators. FORBID 4F is generally compatible with other products under the following conditions: the products do not react with each other, the application rates do not exceed the recommended rates for each product, the products are properly mixed and do not exceed a pH of 10, the application tank mixture remains clean, the products are not applied to vehicles or equipment that have been previously treated with a product containing oil, water or an adjuvant.

INFORMATION: Read entire label and Conditions of Sale before using this product.

IMPORTANT: This pesticide is toxic to fish and aquatic invertebrates. Avoid contamination of surface water through runoff or spray drift. When applying FORBID 4F, use personal protective equipment (PPE) and handle in accordance with label directions.-mounting, false spider mites, yellow spider mite, boxwood spider mite, Europe

STORAGE AND DISPOSAL

STORAGE: Store in a cool, dry place in such a manner as to prevent cross contamination with other pesticides or chemicals. Do not allow the container to contact the soil, rocks, or other objects. DO NOT BURN CONTAMINATED SPRAY MIXTURE OR EQUIPMENT WASHWATER. Do not contaminate water when cleaning equipment or disposing of equipment washwater.

PESTICIDE DISPOSAL:

· Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate can_ be harmful to human health, water, and animals. Do not contaminate water when cleaning equipment or disposing of equipment washwater.

Store in a cool, dry place and in such a manner as to prevent cross contamination with other chemicals. •Do not store near food or food products. •Do not store near petroleum products or other fuel sources. •Store properly marked. •Small quantities can be disposed of into the sewage system. Persistent or accumulated wastes should be managed by a licensed waste generator or handler. •For MEDICAL And TRANSPORTATION Emergencies ONLY Call 24 Hours A Day 1-800-334-7577 •Do not store near food or food products. •Do not store near petroleum products or other fuel sources. •Store properly marked. •Small quantities can be disposed of into the sewage system. Persistent or accumulated wastes should be managed by a licensed waste generator or handler.

GENERAL INFORMATION

FORBID 4F is a Flammable Complex Combustible formulation that is flammable and a fire hazard and will form flammable mixtures in any proportion with water. THIS PRODUCT IS NOT OF THE ALKYL PHOSPHATE CHEMISTRY AND IS NOT CONSIDERED TO BE A RELATION TO OR POSSESS SIMILAR PHYSICAL PROPERTIES TO THE ALKYL PHOSPHATE PESTICIDES. FORBID 4F can be used to treat plants that are sensitive to certain classes of insecticides or pesticides. Applications may be made by the grower, retailer or applicators. FORBID 4F is generally compatible with other products under the following conditions: the products do not react with each other, the application rates do not exceed the recommended rates for each product, the products are properly mixed and do not exceed a pH of 10, the application tank mixture remains clean, the products are not applied to vehicles or equipment that have been previously treated with a product containing oil, water or an adjuvant.

INFORMATION: Read entire label and Conditions of Sale before using this product.

IMPORTANT: This pesticide is toxic to fish and aquatic invertebrates. Avoid contamination of surface water through runoff or spray drift. When applying FORBID 4F, use personal protective equipment (PPE) and handle in accordance with label directions.
Follow manufacturer’s instructions for cleaning handling PPE, use detergents and hot water. Keep and wash PPE separately from other laundry.

For MEDICAL And TRANSPORTATION Emergencies ONLY Call 24 Hours A Day 1-800-334-7577

FIRST AID

IF ON SKIN
• Take off contaminated clothing.
• Wash skin with soap and water until all signs and symptoms of exposure are gone.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• As soon as possible, wash thoroughly and change into clean clothing.
• Remove Personal Protective Equipment immediately after handling this product.

IF IN EYES
• Rinse eyes immediately with plenty of water for 15 to 20 minutes.
• Move person to fresh air.

INHALATION
• Remove person to fresh air. If breathing is difficult, give oxygen.

INGESTION
• Do not give anything by mouth to an unconscious person.
• Call a poison control center or doctor for further treatment advice.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration.

PESTICIDE DISPOSAL:

Non-refillable container. Do not reuse or refill this container. Triple rinse container (or fill for recycling, if available or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities, by burning. If burned, stay out of smoke.

offer for recycling, if available or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities, by burning. If burned, stay out of smoke.

Hazard statements:
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

Call a poison control center or doctor immediately for treatment advice.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

• Call a poison control center or doctor for treatment advice.

Environmental Hazards

This product may contaminate water through runoff or through drift of spray in wind. Poorly draining soils and soils around residential, institutional, public, commercial, and industrial buildings.

Impact statements:

• Use chemical resistant gloves (such as natural rubber, selection category A)
• Use chemical resistant gloves (such as natural rubber, selection category A)
• Long-sleeved shirt and long pants
• Shoes plus socks

Personal Protective Equipment (PPE):

• Long-sleeved shirt and long pants
• Shoes plus socks
• Chemical resistant gloves (such as natural rubber, selection category A)

To shrubs, trees (including non-bearing fruit and nut trees), flowers and foliage plants in outdoor landscapes, campgrounds, golf courses, athletic fields, parks, gardens, rights of way and other easements, and other non-crop areas. This product may be used in or around residential areas.

Directions for use:

• Use chemical resistant gloves (such as natural rubber, selection category A)
• Use chemical resistant gloves (such as natural rubber, selection category A)
• Long-sleeved shirt and long pants
• Shoes plus socks

How to apply:

• Apply specific dosage of FORBID 4F as needed for control. Good coverage of the foliage is recommended.

FORBID 4F is a fluorescent Copper Complex formula that is intended to target pests and weevils and protect a wide variety of plants.

Products with certain characteristics and vegetation, solubility and persistence will be used in accordance with the label for the intended purpose. Always follow label instructions. FORBID 4F is designed for use on a variety of ornamental and vegetable plants, including

Sugar beets, broccoli, and cauliflower. Apply to vegetables that are in the plant’s active growth stage. Apply FORBID 4F to control whiteflies and mites, and to prevent and treat whitefly infestations.

For maximum efficacy against adult whiteflies, use the 4 fl oz rate of FORBID 4F. For heavy infestations, two applications may be necessary to control adult whiteflies.

Aerosol may be used to improve coverage on hard to wet foliage. For best results the treatment should be made when the whitefly or mite population begins to build and before a damaging population becomes established.

Important notes:

Tarsonemid mites (including broad mites and cyclamen mites)

FORBID 4F is also highly effective against whitefly nymphs, plus it has a significant effect on the otherwise difficult false spider mite, boxwood spider mite, tumid mite and Lewis mite)

Best spider mite, spruce spider mite, honeylocust spider mite, Euonymus

False spider mite

FORBID 4F is highly effective against the egg and nymphal stages of whiteflies and mites. For best results, establish.

An adjuvant may be used to improve coverage on hard to wet foliage. For best results the treatment should be made when the whitefly or mite population begins to build and before a damaging population becomes established.

Important notes:

Tarsonemid mites (including broad mites and cyclamen mites)

FORBID 4F is also highly effective against whitefly nymphs, plus it has a significant effect on the otherwise difficult false spider mite, boxwood spider mite, tumid mite and Lewis mite)

Best spider mite, spruce spider mite, honeylocust spider mite, Euonymus

False spider mite

FORBID 4F is highly effective against the egg and nymphal stages of whiteflies and mites. For best results, establish.

Avoid drift or runoff into lakes, reservoirs, rivers, permanent streams, marshes, potholes, vernal pools, natural ponds, estuaries, or commercial fish farm ponds. Do not apply when winds are greater than 15 mph and avoid gusty conditions.

FORBID 4F is physically and biologically compatible with many registered pesticides and fertilizers. However, repeated use of any plant protection product may result in resistant pests or plants. When considering mixing FORBID 4F with other pesticides or other additives, first contact your supplier for advice. For further information, contact your local Bayer representative. If your supplier and Bayer representative have no experience with the combination you are considering, you should conduct a test to determine physical compatibility. If the combination remains mixed, or can be readily re-mixed, the mixture is considered physically compatible. To determine physical compatibility, add the recommended proportions of each chemical with the same proportion of water as will be present in the chemical supply tank, into a suitable container, mix thoroughly and allow to stand for five minutes. If the combination remains mixed, or can be readily re-mixed, the mixture is considered physically compatible.

- Allow enough time for thorough mixing of each product added to tank;
- Continue to fill spray tank with water until 1/2 full;
- Fi ll the spray tank 1/4 to 1/3 full with clean water;
- Mix pesticides in areas not prone to runoff such as concrete mixing/loading pads, disked soil in flat terrain or graveled mix pads, or use a suitable method to contain spills and/or rinsate. Properly empty and triple-rinse pesticide containers.

Bayer CropScience LP disclaims any liability whatsoever for special, incidental or consequential damages, resulting from the use or handling of this product.

LIMITATIONS OF LIABILITY:

• Bayer CropScience LP accepts the following conditions, disclaimer of warranties and limitations of liability.

   IF TERMS ARE NOT ACCEPTABLE, RETURN THE UNOPENED PRODUCT CONTAINER AT ONCE. BY USING THIS PRODUCT, USER OR BUYER ACCEPTS THE FOLLOWING CONDITIONS, DISCLAIMER OF WARRANTIES AND LIMITATIONS OF LIABILITY.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT IS: . . .

EXCEPT AS SPECIFIED ABOVE, BAYER CROPSCIENCE LP DISCLAIMS ANY LIABILITY WHATSOEVER FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

Important: Read before use. Stop - Read the label before use. Keep out of reach of children. For professional use only. OTHER INGREDIENTS

PRODUCT

Forbid 4F contains 4 pounds of spiromesifen per

ACTIVE INGREDIENT:

4-oxaspiro [4, 4] non-3-en-4-yl 3,3-dimethyl-5H-furan-2-one

OTHER INGREDIENTS

- 1-oxaspiro [4, 4] non-3-en-4-yl 3,3-dimethyl-5H-furan-2-one

STOP - Read the label before use. Keep out of reach of children.
Forbid 4F is physically and biologically compatible with many registered pesticides and fertilizers or micronutrients. However, repeated use of any plant protection product may increase the development of resistant strains of pests, including insects and mites. Using FORBID 4F in successive miticide applications during the same growing season is not recommended. Use FORBID 4F as a part of a sound resistance management program that includes other compatible pesticides. Repeated use of any plant protection product may increase the development of resistant strains of pests, including insects and mites.

Some ornamental plant species may be sensitive to FORBID 4F. Use FORBID 4F only as directed. Test the recommended rate on a small number of plants for tolerance to FORBID 4F. The professional user should determine if FORBID 4F could be used safely prior to commercial use. In a small area, test the recommended rates on a small number of the plants of the species you are considering for use. After determining the species are not injured, increase the number of plants to a small number of the species you are considering for widespread use. If you experience with the combination you are considering, you should consult with another person familiar with the use of the chemical. There is no specific test to determine if a plant protection product is compatible with FORBID 4F. If the combination remains mixed, or can be readily re-mixed, the mixture is considered physically compatible. However, repeated use of any plant protection product may increase the development of resistant strains of pests, including insects and mites. Using FORBID 4F in successive miticide applications during the same growing season is not compatible.

For professional use only. For control of mites and whiteflies on ornamental plants, greenhouse crops, turf, and residential or commercial buildings.

**IMPORTANT READ BEFORE USE**

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of liability before using this product. If terms are acceptable, return the unused product container to us. By using this product, user or buyer accepts these terms and conditions.

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of liability before using this product. If terms are acceptable, return the unused product container to us. By using this product, user or buyer accepts these terms and conditions.
MIXING

FORBID 4F is physically and biologically compatible with many registered pesticides and fertilizers or micronutrients. However, because of manner of use and other factors beyond Bayer CropScience LP’s control it is impossible for Bayer CropScience LP to test all combinations of FORBID 4F and other chemicals. It is the responsibility of the user to select and use chemicals in such a manner that adverse interactions are not experienced with the combination they are considering. You should avoid mixing or applying a pesticide that has a strongly herbicide activity or that is strongly phytotoxic, with FORBID 4F. The professional user should determine if FORBID 4F could be used safely prior to commercial use. In a small area, test the recommended rates on a small number of plants for phytotoxicity prior to widespread use. Before using FORBID 4F in tank mix applications, conduct a small area test to determine if the combination remains mixed, or can be readily re-mixed. FORBID 4F is physically and biologically compatible with many registered pesticides and fertilizers or micronutrients. The professional user should determine if the combination remains mixed, or can be readily re-mixed. The use of FORBID 4F with any pesticide, fertilizer or additional inert material may affect the physical compatibility of the treated material. If irrigation is used, conduct irrigations efficiently to prevent excessive loss of irrigation water due to the large number of species and varieties of ornamental plants. To determine physical compatibility, add the recommended proportions of each chemical with the same proportion of water as will be present in the chemical supply tank, into a suitable container, mix thoroughly and allow to stand for five minutes. If the combination remains mixed, or can be readily re-mixed, the mixture is considered physically compatible.

HANDLING

FORBID 4F is packaged in polyethylene containers. Do not allow product or containers to freeze.

LIMITATIONS OF LIABILITY:

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE BUYER FOR ANY BREACH OF WARRANTY OR ANY OTHER CLAIM IN RESPECT OF THE PRODUCT IS THE REPLACEMENT OF PRODUCT OR THE REIMBURSEMENT OF THE PURCHASE PRICE PAID, OR AT BAYER CROPSCIENCE LP’S ELECTION, THE REPLACEMENT OF PRODUCT.

CONDITIONS:

The directions for use of this product are believed to be adequate and must be followed carefully. If terms are not acceptable, return the unopened product container at once.
