EPA Reg. No. 71512-3-279    EPA Est. No. 279-NY-1

Active Ingredient:
Cyazofamid* .......................................................... 34.5%
Other Ingredients: ....................................................... 65.5%
100.0%

*4-chloro-2-cyano-N,N-dimethyl-5-(4-methyphenyl)-1H-imidazolo-1-sulfonamide (CA)
Contains 3.33 pounds Cyazofamid Per Gallon (400 grams per liter)

KEEP OUT OF REACH OF CHILDREN
CAUTION

See other panels for additional precautionary information.
Read entire label carefully and use only as directed.
MANUFACTURED IN FRANCE.

Manufactured for:

FMC
FMC Corporation
Agricultural Products Group
1735 Market Street
Philadelphia PA 19103

Net Contents: 1 Gallon

FIRST AID

If on skin
- Take off contaminated clothing.
- Rinse skin immediately with plenty of soap and
  water for 15-20 minutes.
- Call a poison control center or doctor for treat-
  ment advice.

If in eyes
- Hold eye open and rinse slowly and gently with
  water for 15-20 minutes.
- Remove contact lenses, if present, after the first
  5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treat-
  ment advice.

If swallowed
- Call a poison control center or doctor immedi-
  ately for treatment advice.
- Have person sip a glass of water if able to swal-
  low.
- Do not induce vomiting unless told to do so by
  the poison control center or doctor.
- Do not give anything by mouth to an uncon-
  scious person.

If inhaled
- Move person to fresh air.
- If person is not breathing, call 911 or an ambu-
  lance, then give artificial respiration, preferably
  by mouth-to-mouth, if possible.
- Call a poison control center or doctor for further
  treatment advice

Have the product container or label with you when calling a poi-
son control center or doctor, or going for treatment.

HOTLINE NUMBER

For 24-Hour Medical Emergency Assistance (Human or
Animal) Call 1-800-331-3148.
For Chemical Emergency, Spill, Leak, Fire or Accident,
Call 1-800-331-3148.

PRECAUTIONARY STATEMENTS
Hazards to Humans (and Domestic
Animals)

CAUTION
Harmful if absorbed through skin. Avoid contact with skin, eyes or cloth-
ing. Avoid breathing spray mist. DO NOT take internally.

Personal Protective Equipment (PPE)
Applicators and other handlers must wear long-sleeved shirt and long
pants, socks, shoes, and chemical resistant gloves made of any water-
proof material.

Remove PPE immediately after handling this product. Wash the outside
of gloves before removing. As soon as possible, wash thoroughly and
change into clean clothing. Do not allow contact of contaminated cloth-
ing with unprotected skin. Follow manufacturer’s instructions for clean-
ing/ maintaining PPE. If no such instructions for washables, use detergent
and hot water. Keep and wash PPE separately from other laundry.
Engineering Control Statements
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for “applicators and other handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment break-down.

User Safety Recommendations

Users Should:

- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco.
- Remove and wash contaminated clothing before reuse.

Environmental Hazards

DO NOT apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. DO NOT contaminate waters when disposing of equipment wash waters or rinsates.

AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment-and-weather-related factors determine the potential for spray drift. The applicator is responsible for considering all these factors when making decisions. Where states have more stringent regulations, they must be observed.

STORAGE AND DISPOSAL

DO NOT contaminate water, food or feed by storage or disposals. Open dumping is prohibited.

Pesticide Storage: Store in original container, in a secured, dry place separate from fertilizer, food, and feed.

Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide, pesticide spray or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal: DO NOT reuse empty container. Triple rinse (or equivalent) and offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN PLANT INJURY OR POOR DISEASE CONTROL.

Do not use for disease control on fruiting vegetables (other than tomato transplants) or cucurbit vegetables grown for fruit production in greenhouses.

ROTATIONAL CROP RESTRICTIONS

Crops on this label may be planted immediately after the last treatment. Do not plant other crops not registered for this product within 30 days after the last application.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protect handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURE USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted entry interval (REI) of twelve (12) hours. PPE required for entry to the treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls, chemical resistant gloves made of any waterproof material, shoes plus socks and protective eyewear.

GENERAL INFORMATION

MIXING AND SPRAYING

RANMAN FUNGICIDE can be used effectively in dilute or concentrated sprays. Thorough, uniform coverage is essential for disease control.

NOTE: Slowly invert container several times to assure uniform mixture of formulation before adding this product to the spray tank.

Dosage rates on this label indicate fluid ounces of RANMAN FUNGICIDE per acre, unless otherwise stated. Under conditions favorable for disease development, the highest rate specified and shortest application interval should be used. For best product performance in all applications utilizing the recommended proportions of product, the crop or stage of development, an organosilicone surfactant should be added according to the manufacturer's label recommendations in order to improve spray coverage when the disease infection is severe. However, a non-ionic surfactant or a blend of an organosilicone and a non-ionic surfactant may be used according to the manufacturer's label when disease infection is moderate or light. Do not use a surfactant in applications to grapes or tomato greenhouse transplant production.

RANMAN FUNGICIDE may be applied with all types of spray equipment normally used for ground and aerial applications.

The required amount of RANMAN FUNGICIDE should be added slowly into the spray tank during filling. With concentrate sprays, premix the required amount of RANMAN FUNGICIDE in a clean container and add to the spray tank as it is being filled. Keep agitator running when filling spray tank and during spray operations. DO NOT allow spray mixture to stand overnight or for prolonged periods. Prepare only the amount of spray required for immediate use. Spraying equipment should be thoroughly cleaned immediately after the application.

Apply RANMAN FUNGICIDE in sufficient water to obtain adequate coverage of the foliage. Gallons to be used will vary with crop and amount of plant growth. Spray volume will usually range from 20 to 100 gallons per acre (200 to 1000 liters per hectare) for dilute sprays, and 5 to 10 gallons per acre (50 to 100 liters per hectare) for concentrate ground and aerial sprays. For aerial applications, apply RANMAN FUNGICIDE in a minimum of 5 gallons of water per acre. Application through sprinkler irrigation systems is not recommended unless specific directions are given for a crop. See application and calibration instruction below.

TANK MIX COMPATIBILITY

RANMAN FUNGICIDE is physically compatible (no nozzle or screen blockage) with many products recommended for control of diseases and insects on vegetable crops. Read and follow all manufacturer's label recommendations for the tank mix companion product. If it is the applicator's responsibility to ensure that the companion product is EPA approved for use on the intended crop. RANMAN FUNGICIDE is generally compatible with other insecticides, fungicides, fertilizers and micronutrient products provided sufficient free water is available for dispersion of all the tank mix products. However, the physical compatibility of RANMAN FUNGICIDE with tank mix partners must be evaluated before use. Conduct a jar test with intended tank-mix pesticides prior to preparation of large volumes. Use the following procedure:

1) Pour the recommended proportions of the products into a suitable container of water, 2) Mix thoroughly and 3) Allow to stand 5 minutes. If the combination remains mixed or can be re-mixed readily, it is considered physically compatible. Any physical incompatibility in the jar test indicates that RANMAN FUNGICIDE should not be used in the tank-mix.
RANMAN FUNGICIDE is physically compatible (no nozzle or screen blockage) with the following list of products:

CROP RESPONSE
RANMAN FUNGICIDE is not phytotoxic to the crop or succeeding crops when applied according to label instructions.

INTEGRATED PEST MANAGEMENT
RANMAN FUNGICIDE is an excellent disease control agent when used according to label directions for control of several Comyect fungi. Although RANMAN FUNGICIDE has limited systemic activity, it should be utilized as a protectant fungicide and applied before the disease infects the crop. Depending upon the level of disease pressure, good protection of the crop against disease can be expected over a period of 7 to 10 days. RANMAN FUNGICIDE is recommended for use as part of an Integrated Pest Management (IPM) program, which may include the use of disease-resistant crop varieties, cultural practices, crop rotation, biological disease control agents, pest scouting and disease forecasting systems aimed at preventing economic pest damage. Practices known to reduce disease development should be followed. Consult your state cooperative extension service or local agricultural authorities for additional IPM strategies established in your area. RANMAN FUNGICIDE may be used in State Agricultural Extension advisory (disease forecasting) programs that recommend application timing based upon environmental factors that favor disease development.

RESISTANCE MANAGEMENT
Some plant pathogens are known to develop resistance to products used repeatedly for disease control. RANMAN FUNGICIDE's mode of action is complex III of fungal respiration: ubiquinone reductase, Qi site, FRAC code 21. A disease management program that includes alternation or tank mixes between RANMAN FUNGICIDE and other labeled fungicides that have a different mode of action and/or control pathogens not controlled by RANMAN FUNGICIDE is essential to prevent disease resistant pathogens populations from developing. RANMAN FUNGICIDE should not be utilized continuously nor tank mixed with fungicides that have shown to have developed fungal resistance to the target disease.

Since pathogens differ in their potential to develop resistance to fungicides, follow the directions in the "Directions For Use" section of this label for specific resistance management strategies for each crop. Consult with your Federal or State Cooperative Extension Service representatives for guidance on the proper use of RANMAN FUNGICIDE in programs that seek to minimize the occurrence of disease resistance. RANMAN FUNGICIDE is not cross-resistant with other classes of fungicides that have different modes of action.

<td></td>
<td></td>
<td>Fl Oz. Product Per Acre (lb. a.i/A)</td>
<td>Resistance Management: DO NOT apply more than six sprays of RANMAN FUNGICIDE per season. Alternate sprays of RANMAN FUNGICIDE with a fungicide with a different mode of action. DO NOT make more than three consecutive applications of RANMAN FUNGICIDE followed by at least three applications of fungicides having different modes of action before applying additional RANMAN FUNGICIDE. Application instructions: For Downy mildew control, make fungicide applications on a 7-10 day schedule beginning with initial flowering or when disease conditions are favorable for disease development. Use the low rate and long interval as disease preventive. For Phytophthora blight, apply RANMAN FUNGICIDE to the base of the plants at the time of transplanting. Alternatively, RANMAN FUNGICIDE may be applied in transplant water at the time of transplanting. Apply 2.75 fl oz per acre of the transplant water. It is recommended that the water volume for this initial application be at least 60 gallons per acre. Additional applications should be made on a 7 to 10 day schedule beginning when conditions are favorable for disease development. RANMAN FUNGICIDE should be tank-mixed with an organosilicone surfactant when the disease infection is severe, or a non-ionic surfactant or a blend of an organosilicone and a non-ionic surfactant when disease infection is moderate or light, at the manufacturer's label recommendations for water volumes up to 60 gallons per acre. Normal water volumes are 20 to 50 gallons per acre. RANMAN FUNGICIDE may be applied through sprinkler irrigation equipment. See calibration directions preceding this section. Restrictions: DO NOT apply more than 16.5 fluid ounces (0.43 lb a.i.) per acre per crop growing season. The Pre-Harvest Interval (PHI) for this crop group is 5 days. Crops on this label may be planted immediately after the last treatment. Do not plant other crops not registered for this product within 30 days after the last application.</td>

</tr>
<tr>
<td>Potato</td>
<td>Late blight (Phytophthora infestans)</td>
<td>1.4 to 2.75 (0.054 to 0.071)</td>
<td>Resistance Management: DO NOT apply more than 10 sprays of RANMAN FUNGICIDE per crop. Alternate sprays of RANMAN FUNGICIDE with a fungicide with a different mode of action. DO NOT make more than three consecutive applications of RANMAN FUNGICIDE followed by at least three applications of fungicides having different modes of action before applying additional RANMAN FUNGICIDE. For pink rot control, do not use RANMAN FUNGICIDE at reduced rates as incomplete control may occur promoting potential for development of resistant strains. Rotate other fungicides with a different mode of action or tank-mix these fungicides with RANMAN FUNGICIDE to reduce the chance of resistance occurring. Development of resistance cannot be predicted. If a treatment of RANMAN FUNGICIDE is not effective, a resistant strain of fungi may be present. Accordingly, neither RANMAN FUNGICIDE nor other fungicides with a similar mode of action will effectively control the disease. Consult your local State University for alternative recommendations. Application instructions: For Late blight control, make fungicide applications on a 7- to 10-day schedule beginning when warning systems forecast disease infection periods, generally at the start of flowering or when conditions are favorable for disease development. Use the low rate and longest interval for preventative applications or very low disease pressure, increasing the rate and shortening the interval as disease pressure and/or fast crop development increases up to the maximum rate and shortest interval. For Late blight control, make the last 2 to 3 applications prior to desiccation with RANMAN FUNGICIDE at 2.75 fl. oz. applied weekly. For pink rot control at planting, apply 0.42 fluid ounces product per 1000 linear feet of row in furrow at planting using a minimum of 5 gallons of water per acre. Apply RANMAN FUNGICIDE using a 4 to 8 inch band directly over the seed pieces prior to furrow closure. A side dressing of RANMAN FUNGICIDE applied at hilling may be necessary for additional control. Where fenhexamid-resistant strains of Phytophthora erythroseptica are not present, a full rate of RANMAN FUNGICIDE can be tank-mixed with fenhexamid containing fungicides for additional control. For additional control of Pink Rot in combination with an animplanting, in-furrow, RANMAN FUNGICIDE application, apply RANMAN FUNGICIDE as a broadcast spray at 2.75 fluid ounces in a minimum of 20 gallons of finished spray solution per acre at hilling. Additional applications may be needed depending on susceptibility of potato varieties to pink rot disease, environmental conditions conducive to favor severe disease development, or fields located in long growing season areas, etc. Follow the guidelines for disease resistance management listed above. RANMAN FUNGICIDE should be tank-mixed with an organocarbonate surfactant when the disease infection is severe, or a non-ionic surfactant or a blend of an organosilicone and a non-ionic surfactant when disease infection is moderate to light, at the manufacturer’s label recommendations for water volumes up to 60 gallons per acre. Normal water volumes are 20 to 50 gallons per acre. RANMAN FUNGICIDE may be applied through sprinkler irrigation equipment. See calibration directions preceding this section. Restrictions DO NOT apply more than 27.5 fluid ounces per acre per year. DO NOT apply within 7 days of harvest. Crops on this label may be planted immediately after the last treatment. Do not plant other crops not registered for this product within 30 days after the last application.</td>

<td>Tomato Greenhouse Transplant Production: For control of damping-off caused by Pythium spp., make a single fungicide application to the seedling tray at the time of planting or at any time thereafter up to 1 week before transplanting. Apply the fungicide solution as a drench to thoroughly wet the growing medium. This results in the use of approximately 1 pint of solution per square foot if the growing medium is 4 inches deep. Do not use any surfactant with this drench application.</td>
</tr>
</tbody>
</table>
APPLICATION AND CALIBRATION TECHNIQUES FOR SPRINKLER IRRIGATION

Apply this product only through center pivot, motorized lateral move, traveling gun, solid set or portable (wheel move, side roll, end tow, or hand move) irrigation system(s). DO NOT apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

DO NOT apply RANMAN FUNGICIDE through irrigation systems connected to a public water system. “Public water system” means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days per year.

Controls for both irrigation water and pesticide injection systems must be functionally interlocked, so as to automatically terminate pesticide injection when the irrigation water pump stops. A person on the edgeable of the irrigation system and responsible for its operation shall be present so as to discontinue pesticide injection and make necessary adjustments, should the need arise.

The irrigation water pipeline must be fitted with a functional, automatic, quick-closing check valve to prevent the flow of treated irrigation water back toward the water source. The pipeline must also be fitted with a vacuum relief valve and low-pressure drain, located between the irrigation water pump and the check valve, to prevent back-siphoning of treated irrigation water into the water source.

Always inject RANMAN FUNGICIDE into irrigation water after it discharges from the irrigation pump and after it passes through the check valve. Never inject pesticides into the intake line on the suction side of the pump.

Pesticide injection equipment must be fitted with a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump. Interlock this valve to the power system, so as to prevent fluid from being withdrawn from the chemical supply tank when the irrigation system is either automatically or manually turned off.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Spray mixture in the chemical supply tank must be agitated at all times, otherwise settling and uneven application may occur. DO NOT apply when wind speed favors drift beyond the area intended for treatment.

RANMAN FUNGICIDE may be used through two basic types of sprinkler irrigation systems as outlined in Sections A and B below. Determine which type of system is in place, then refer to the appropriate directions provided for each type.

A. Center Pivot, Motorized Lateral Move and Traveling Gun Irrigation Equipment

For injection of pesticides, these continuously moving systems must use a positive displacement injection pump of either diaphragm or piston type, constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock and capable of injection at pressures approximately 2-3 times those encountered within the irrigation water line. Venturi applicator units cannot be used on these systems.

Thoroughly mix recommended amount of this product for acreage to be covered into the same amount of water used during calibration and inject into system continuously for one revolution or run. Mixture in the chemical supply tank must be continuously agitated during the injection run. Shut off injection equipment after one revolution or run, but continue to operate irrigation system until this product has been cleared from the last sprinkler head.

B. Solid Set and Portable (Wheel Move, Side Roll, End Tow, or Hand Move) Irrigation Equipment

With stationary systems, an effectively designed in-line venturi applicator unit is preferred which is constructed of materials that are compatible with pesticides; however, a positive-displacement pump can also be used.

Determine acreage covered by sprinkler. Fill tank of injection equipment with water and adjust flow to use contents over a 30 to 45 minute period. Mix desired amount of RANMAN FUNGICIDE for acreage to be covered with water so that the total mixture of this product plus water in the injection tank is equal to the quantity of water used during calibration.

Agitation is recommended. RANMAN FUNGICIDE can be injected at the beginning or end of the irrigation cycle or as a separate application. Stop injection equipment after treatment is completed and continue to operate irrigation system until this product has been cleared from last sprinkler head.

WARRANTY AND LIMITATION OF DAMAGES

Seller warrants to those persons lawfully acquiring title to this product that at the time of first sale of this product by Seller that this product conformed to its chemical description and was reasonably fit for the purposes stated on the label when used in accordance with Seller's directions under normal conditions of use. To the extent consistent with applicable law, Buyers and users of this product assume the risk of any use contrary to such directions.

EXCEPT AS PROVIDED ELSEWHERE IN WRITING CONTAINING AN EXPRESS REFERENCE TO THIS WARRANTY AND LIMITATION OF DAMAGES, SELLER MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OR GUARANTEE, INCLUDING ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR OF MERCHANTABILITY, AND NO AGENT OF SELLER IS AUTHORIZED TO DO SO.

In no event shall Seller's liability for any breach of warranty or guarantee exceed the purchase price of the product as to which a claim is made. To the extent consistent with applicable law, Buyers and users of this product are responsible for all loss or damage from use or handling of this product which results from conditions beyond the control of Seller, including, but not limited to, incompatibility with other products unless otherwise expressly provided in Directions for Use of this product, weather conditions, cultural practices, moisture conditions or other environmental conditions outside of the ranges that are generally recognized as being conducive to good agricultural and/or horticultural practices.
