Pet Organics NO STAY is a special blend of natural herbs that most pets find displeasing and prefer to avoid. In training your pet to stay off furniture or other designated areas, it is important to remember that you are attempting to alter a habit which may require multiple applications as well as the recommended training tips listed below.

Directions:
Shake product before each use. Spray NO STAY on areas you want pets to stay off. Before using product test on small inconspicuous area of surface. Reapply NO STAY daily or as needed depending on the severity of your pet’s habit.

Redirecting:
- If your pet attempts to tolerate the herbal scent of NO STAY and recovers the treated area; immediately redirect them to one place you prefer them to lie.
- The preferred place should always be available and always the same location.
- The scent of NO STAY and redirecting your pet will help alter the unwanted behavior.

Location, Location, Location:
- Remember your pet found security and comfort not only on your favorite furniture but in that particular room.
- Conditions of this room should be considered when choosing a new area for your pet.
- If you choose to keep the pet’s bed in the same room be sure to distance it from the furniture that is off limits and away from the scent of NO STAY.

Positive Reinforcement:
- Once your pet begins to occupy the preferred “pet bed” on their own be sure to offer positive reinforcement, from a simple petting to small treats or toys.

NO STAY is a training aid, but occasionally a few pets are very persistent and the Gammon Corp./distributors/dealers are not accountable for damage to furniture or fixtures created by product use or pet, either in part or in full.
